17 November 2026 **ASX Release**

YUINMERY RC DRILLING PROGRAM COMMENCING

SUMMARY

Empire Resources Limited (ASX: ERL; "Empire" or the "Company") is pleased to advise of the commencement of the third, reverse circulation (RC) program (~2,000m) this year at the Company's Yuinmery Copper-Gold Project.

The RC program will continue to test the recently discovered gold mineralisation at Microbe Well and the copper sulphides at the Lorne Gossan prospect.

A further two deep holes are scheduled at Hillside North to follow up the anomalous Pt-Pd-Ni-Cu values discovered earlier this year. Samples recovered will also be assayed for REE to confirm and expand on REE values reported on 26 October 2026 [1].

Several shallow holes are also planned at the Marcus Prospect to further test the near surface, iron rich Cu-Au mineralisation outlined there in 2025 [2].

The program is expected to take about 2 weeks to complete. Assays will follow when available.

In addition, Microbe Well, Lorne and Hillside will have PVC casing inserted down several drill holes to allow geophysical DHEM surveys to be completed early next year.

This announcement is authorised for release by the Board.
