ASX Release

18 November 2026

ANNUAL GENERAL MEETING CHAIRMAN'S ADDRESS

Welcome, fellow shareholders, to Sunshine Metals' Annual General Meeting.

The focus of the 2026 financial year was implementation of a strategic plan to deliver growth and progress towards becoming North Queensland's next gold producer by mid-2027. Today, I would like to highlight Sunshine's key achievements and touch on the year ahead.

Let me begin with the acquisition of the Mt Moss Operation in April 2026. It was a significant milestone for Sunshine, providing full ownership of a 300Ktpa processing facility, extensive on-site infrastructure and a strategic location close to both Liontown and Sybil. Refurbishment began immediately after the acquisition and has progressed to plan. We have completed key works on schedule, including decommissioning magnetite equipment, upgrading the mill, reconditioning pumps, rehabilitating roads, recommissioning the camp and offices, and procuring long-lead items for the Gold Circuit. Construction of the Gold Circuit is expected to begin shortly, supporting planned commissioning and first gold production in mid-2027.

Turning to Liontown, within our Ravenswood Consolidated Project, exploration and development have continued to advance. Following year-end, the Liontown Mineral Resource increased to 7.27Mt at 3.19g/t AuEq. for 745Koz AuEq. recoverable, incorporating drilling completed during the year. The updated Liontown Mining Study released in September 2026 outlined a production target of approximately 80Koz of gold and 952Koz of silver. Compared with the February 2026 study, it showed an approximately 10% improvement in net operating cashflow and a 6% reduction in all-in sustaining cost. Net operating cashflow after all capital at Liontown is estimated at approximately $179.8 million. Mining and environmental approvals are well advanced, and early contractor engagement is underway to support commencement in mid-2027.

Beyond the immediate development plan, 2025-26 drilling at Liontown's Gold Panel has produced some of the highest-grade results recorded to date including 22m @20.2g/t Au. These results support the long-term potential of the underground lode and the broader VMS system.

At Sybil, we continue to see the potential for an epithermal gold opportunity in North Queensland. Diamond drilling at Francis Creek delivered multiple high-grade intercepts. Our first detailed airborne magnetic and radiometric survey, completed in June 2026, has also improved our understanding of Sybil's structural architecture. Following year-end, RC drilling is testing new targets across Francis Creek, Francis Creek East Blue Range and Burdekin. Rock chips at Francis Creek East and Blue Range returned grades of up to 28.1g/t and 20.4g/t gold, respectively. Sybil remains a potential second production front for Sunshine.

Our financial position also strengthened significantly during the year. We raised approximately $31.7 million before costs through two successful capital raisings. This comprised a $5.0 million placement in September 2025, followed by a $19 million placement and the Share Purchase Plan associated with the Mt Moss acquisition. The SPP attracted approximately $7.7 million in applications, well

above its initial $3 million target. The Board elected not to scale back those applications. At 30 June 2026, Sunshine held approximately $20.6 million in cash. This provides a strong foundation to advance Mt Moss construction, progress Liontown approvals and continue exploration at Sybil and across the broader Ravenswood Project.

We have also rationalised our project portfolio during the year, by divesting the non-core Hodgkinson Project allowing us to concentrate our resources on Mt Moss, Liontown and Sybil.

Before I close, I would like to acknowledge the people behind these achievements. On behalf of the Board, I sincerely thank our managing director, Damien Keys, the management team, staff, suppliers, contractors and technical partners, together with my fellow Board members, for their dedication, professionalism and commitment throughout the year.

To our shareholders, thank you for your continued support and confidence in Sunshine's strategy. Your backing has enabled us to pursue our growth plans and bring the Company to this important stage in its development.

Looking ahead, Sunshine Metals is on the cusp of becoming Queensland's next gold producer. With Mt Moss refurbishment on schedule, Liontown advancing towards development and Sybil continuing to reveal its potential, the year ahead promises to be transformative. We are on track to generate strong cashflows and deliver sustained value for shareholders.

Thank you for your ongoing support and for joining us at today's Annual General Meeting.

Sunshine's Board has authorised the release of this announcement to the market.

Competent Person's Statement

The information in this report that relates to Exploration Results is based on, and fairly represents, information compiled by Mr Matt Price, a Competent Person who is a Member of the Australian Institute of Geoscientists (AIG) and the Australian Institute of Mining and Metallurgy (AusIMM). Mr Price has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration, and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the JORC Code. Mr Price consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to Mineral Resources at Liontown is based on information compiled and reviewed by Mr Esteban Jimenez who is a Member of the Australian Institute of Geoscientists (AIG) and is a Principal Resource Geologist employed by Sunshine Metals Ltd. Mr Jimenez has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Mineral Resources. Mr Jimenez consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to Mineral Resources at Plateau is based on information compiled and reviewed by Dr Damien Keys, who is a Member of the Australasian Institute of Mining and Metallurgy and a Member of the Australian Institute of Geoscientists (AIG). Dr Keys has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Mineral Resources. Dr Keys consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to Mineral Resources at Waterloo and Orient is based on information compiled and reviewed by Mr Stuart Hutchin, who is a Member of the Australian Institute of Geoscientists (AIG) and is a Principal Geologist employed by Mining One Pty Ltd. Mr Stuart Hutchin has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Mineral Resources. Mr Stuart Hutchin consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

About Sunshine Metals
Big System Potential.

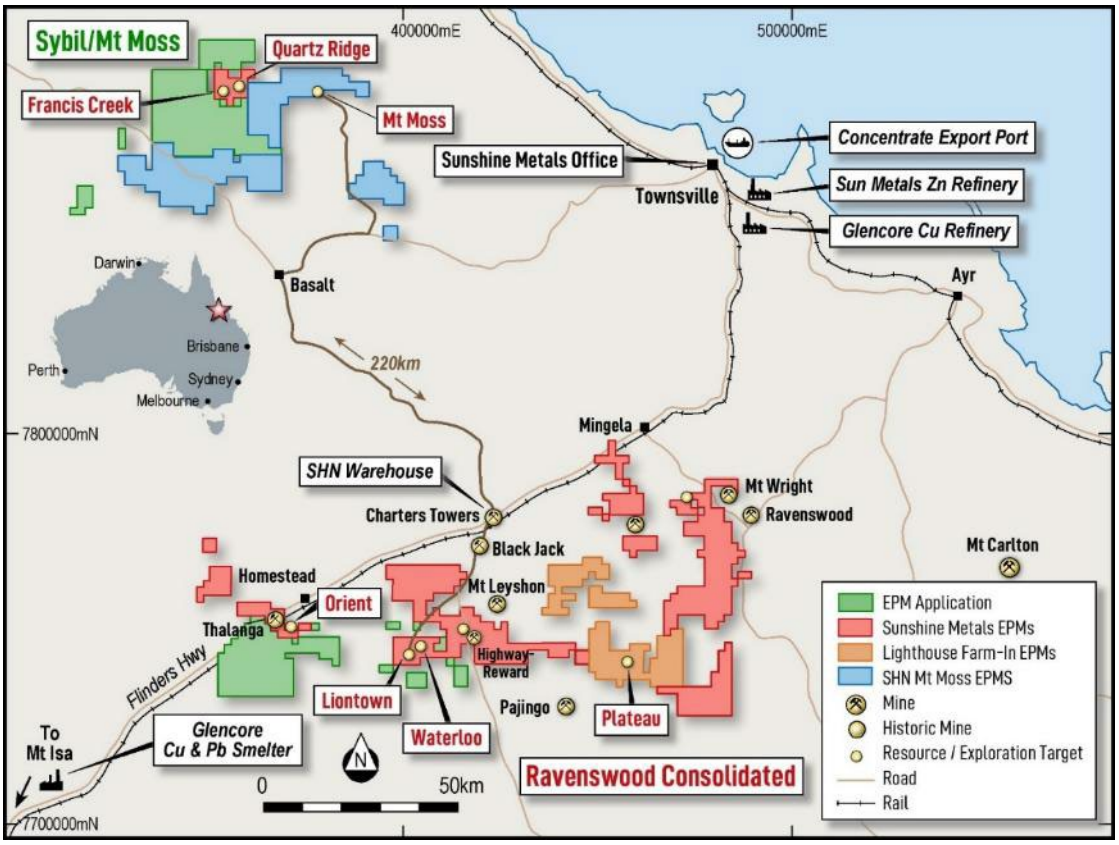
Ravenswood Consolidated Project (Zn-Cu-Pb-Au-Ag-Mo): Located in the Charters Towers-Ravenswood district which has produced over 20Moz Au and 14mt of VMS Zn-Cu-Pb-Au ore. The project comprises:

- The newly interpreted Liontown Dome, hosting multiple gold and base metal prospects.
- A Zn-Cu-Pb-Au VMS Resource of 8.36Mt @ 3.47g/t AuEq (931koz AuEq) or 11.8% ZnEq (2% Measured, 46% Indicated, 52% Inferred[1]);
- The under-drilled Liontown Au-rich footwall with significant intersections including:
  - **22.0m @ 20.2g/t Au** (69m, 26LTRC077)
  - **20.0m @ 18.2g/t Au** (109m, 24LTRC005)
  - **17.0m @ 22.1g/t Au** (67m, 23LTRC002)
  - **10.0m @ 31.91g/t Au** (41m, 25LTRC009)
  - **8.0m @ 11.7g/t Au & 0.9% Cu** (115m, LLRC184)
  - **8.1m @ 10.7g/t Au** (154m, LTDD22055)
  - **5.0m @ 27.9g/t Au, 1.7% Cu** (20m, LRC018)
- Advanced Au-Cu VMS targets at Coronation and Highway East, analogous to the nearby Highway-Reward Mine (3.9mt @ 5.3% Cu & 1.1g/t Au mined).
- Recent addition of the Sybil low sulphidation epithermal gold system, located 135km west of Townsville and ~140km north of Charters Towers.
- Sybil is analogous to the nearby Pajingo epithermal system (~4Moz Au produced) and has seen little exploration for the last 20 years.
- Sybil's most advanced prospect, Francis Creek, contains best results including:
  - **4.4m @ 57.51g/t Au** from 23.6m (25FCDD003)
  - **4.4m @ 17.23g/t Au** from 82.5m (25FCDD012)
  - **7m @ 10.6g/t Au** from 7m (FCP05)

[1] This announcement contains references to exploration results and estimates of mineral resources that were first reported in Sunshine's ASX announcement dated 14 July 2026. Sunshine confirms that it is not aware of any new information or data that materially affects the information included in the relevant market announcement. In relation to estimates of mineral resources, Sunshine confirms that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. Metal equivalent calculation on next page.

- **3m @ 23.2g/t Au** from 6m (open at end of hole, FCP04)
- **6m @ 10.5g/t Au** from 7m (open at end of hole, FCP46)
- rock chips of **907g/t Au** and **262g/t Au** have been returned from Francis Creek and a bulk sample mined in 1991 produced **961t @ 7.6g/t Au (235oz Au).**

**Investigator Project (Cu):* Located 100km north of the Mt Isa, home to rich copper-lead-zinc mines that have been worked for almost a century. Investigator is hosted in the same stratigraphy and similar fault architecture as the Capricorn Copper Mine, located 12km north.



Recoverable Gold & Zinc Equivalent calculations

*The AuEq calculation is as follows: AuEq = (Zn grade% * Zn recovery * (Zn price $/t * 0.01/ (Au price $/oz / 31.103))) + (Cu grade % * Cu recovery % * (Cu price $/t/ (Au price $/oz / 31.103))) + (Pb grade % * Pb recovery % * (Pb price $/t/ (Au price $/oz / 31.103))) + (Au grade g/t / 31.103 * Au recovery %) + (Ag grade g/t / 31.103 * Ag recovery % * ((Ag price $/oz / 31.103 / (Au price $/oz / 31.103)))*

*The ZnEq calculation is as follows: ZnEq = (Zn grade% * Zn recovery) + (Cu grade % * Cu recovery % * (Cu price $/t/ Zn price $/t * 0.01))) + (Pb grade % * Pb recovery % * (Pb price $/t/ Zn price $/t * 0.01)) + (Au grade g/t / 31.103 * Au recovery % * ((Au price $/oz / 31.103) / Zn price $/t * 0.01))) + (Ag grade g/t /31.103 * Ag recovery % * ((Ag price $/oz / 31.103) / Zn price $/t * 0.01)).*

The gold and zinc equivalent grades for Greater Liontown (g/t AuEq, % ZnEq) are based on the following prices: US$3,300t Zn, US$13,000t Cu, US$1,800t Pb, US$3,500oz Au, US$60oz Ag.

For Liontown, metallurgical metal recoveries are broken into two domains: oxide/transitional and fresh. Each domain and associated recoveries are supported by metallurgical test work and are Oxide/Transitional (Liontown) 0% Zn, 0% Cu, 0% Pb, 85% Au, 65% Ag & Fresh 88.8% Zn, 80% Cu, 70% Pb, 80% Au, 65% Ag.

For Waterloo fresh material, Orient and Plateau, the following recoveries were assumed 88.8% Zn, 80% Cu, 70% Pb, 50% Au, 65% Ag. For Waterloo transition material, recoveries of 76% Zn, 58% Cu and 0% Pb have been substituted into the ZnEq formula It is the opinion of Sunshine and the Competent Person that the metals included in the ZnEq formula have reasonable potential to be recovered and sold.

The Ravenswood Consolidated VMS Resource is comprised of 8.4mt @ 1.3g/t Au, 28g/t Ag, 0.8% Cu, 4.7% Zn & 1.5% Pb (11.8% ZnEq). For further details refer to SHN ASX Release, 14 July 2026, "Significant Upgrade to Liontown Resource".

SHN earning 75% equity in Lighthouse Farm-In tenements. Refer to ASX release, 20 January 2023 "Consolidation of High-Grade Advanced Au Prospects, RW".
The gold and zinc equivalent grades for Greater Liontown (g/t AuEq, % ZnEq) are based on the following prices:
US$2,900t Zn, US$9,500t Cu, US$2,000t Pb, US$2,500oz Au, US$30oz Ag. Metallurgical metal recoveries are broken into two domains: copper-gold dominant and zinc dominant. Each domain and associated recoveries are supported by metallurgical test work and are Copper-gold dominant – 92.3% Cu, 86.0% Au, Zinc dominant 88.8% Zn, 80% Cu, 70% Pb, 65% Au, 65% Ag.
The AuEq calculation is as follows: AuEq = (Zn grade% * Zn recovery * (Zn price $/t * 0.01/ (Au price $/oz / 31.103))) + (Cu grade % * Cu recovery % * (Cu price $/t/ (Au price $/oz / 31.103))) + (Pb grade % * Pb recovery % * (Pb price $/t/ (Au price $/oz / 31.103))) + (Au grade g/t / 31.103 * Au recovery %) + (Ag grade g/t / 31.103 * Ag recovery % * ((Ag price $/oz / 31.103 / (Au price $/oz / 31.103)))
The ZnEq calculation is as follows: ZnEq = (Zn grade% * Zn recovery) + (Cu grade % * Cu recovery % * (Cu price $/t/ Zn price $/t * 0.01))) + (Pb grade % * Pb recovery % * (Pb price $/t/ Zn price $/t * 0.01)) + (Au grade g/t / 31.103 * Au recovery % * ((Au price $/oz / 31.103) / Zn price $/t * 0.01))) + (Ag grade g/t /31.103 * Ag recovery % * ((Ag price $/oz / 31.103) / Zn price $/t * 0.01)).
For Waterloo transition material, recoveries of 76% Zn, 58% Cu and 0% Pb have been substituted into the ZnEq formula. For Liontown oxide material, recoveries of 44% Zn, 40% Cu and 35% Pb have been substituted into the ZnEq formula. Further metallurgical test work is required on the Liontown oxide domain. It is the opinion of Sunshine and the Competent Person that the metals included in the ZnEq formula have reasonable potential to be recovered and sold.
The Ravenswood Consolidated VMS Resource is comprised of 7.36mt @ 1.4g/t Au, 0.9% Cu, 5.2% Zn, 1.6% Pb and 31g/t Ag (10.9% ZnEq).
For further details refer to SHN ASX Release, 14 July 2026, "Significant Upgrade to Liontown Resource".
