About Broken Hill Gold

Following the strategic demerger of its highly prospective North Queensland exploration portfolio, which included the Alice River and St George projects, the Company is now exclusively focused on its flagship White Dam Project in the exciting and under explored Curnamona province of South Australia.

White Dam provides Broken Hill Gold with a significant portfolio of exploration targets headlined by the exciting recent discovery of the Icebreaker sulphide gold-copper discovery. In addition, White Dam provides a clear, accelerated pathway to modest oxide gold production that aims to materially contribute to funding the Company's exploration initiatives. The project features established infrastructure, including open-pit mines, a heap leach facility, and a fully operational gold extraction plant, positioning the company to rapidly unlock value and fund future growth.

The Curnamona province is becoming some of the most prized exploration ground in Australia with major companies now focusing on acquiring and exploring in the region. Broken Hill Gold has a unique early mover advantage due to having secured key tenure with outstanding potential for significant discoveries as well as a credible, staged path to production.
