AUSTRALIAN SECURITIES EXCHANGE ANNOUNCEMENT

19 November 2026

Strong Demand for EdenCrete® Products Continues into Q2 FY27

US$538,896 (~A$795,000) of orders in seven weeks

HIGHLIGHTS

- **Strong demand for EdenCrete® products has continued into the December 2026 quarter (Q2 FY27), with total EdenCrete® orders of US$538,896 (~A$795,000) received in the first seven weeks of the quarter (1 October 2026 to 18 November 2026).**
- **This includes new orders of US$204,786 (~A$302,000) from ready-mix concrete plants in Colorado, USA, which on their own exceed Eden US's total sales of all EdenCrete® products for the entire September 2026 quarter (US$121,749).**
- **The total also includes the US$334,110 EdenCrete®Pz7 order from Holcim Ecuador, previously announced on 29 October 2026.**
- **The number of ready-mix concrete plants with EdenCrete® bulk storage and dispensing installations has grown to 34 in the USA, Ecuador and Canada, following the completion of four further installations since 30 September 2026 (two in Colorado and two in Texas).**

DETAILS

Eden Innovations Ltd (ASX: EDE) ("Eden" or "the Company") is pleased to provide an update on sales of its EdenCrete® products for the period from 1 October 2026 to 18 November 2026, being approximately the first half of the December 2026 quarter (Q2 FY27).

EdenCrete® Orders – 1 October 2026 to 18 November 2026

During the period, Eden's wholly owned US subsidiary, Eden Innovations LLC ("Eden US"), received purchase orders for EdenCrete® products totalling US$538,896 (~A$795,000), comprising US$204,786 from ready-mix concrete plants in the USA and US$334,110 from Ecuador.

The US orders, totalling US$204,786 and comprising both EdenCrete®Pz7 and the original EdenCrete® product, were placed by ready-mix concrete plants that already have EdenCrete® bulk storage and dispensing installations. These orders alone exceed the total sales of all EdenCrete® products by Eden US for the entire September 2026 quarter of US$121,749 (see Eden's ASX announcement of 5 October 2026).

The order of US$334,110 from Holcim Ecuador S.A. was announced on 29 October 2026 and is included above to show the total EdenCrete® orders received during the period.

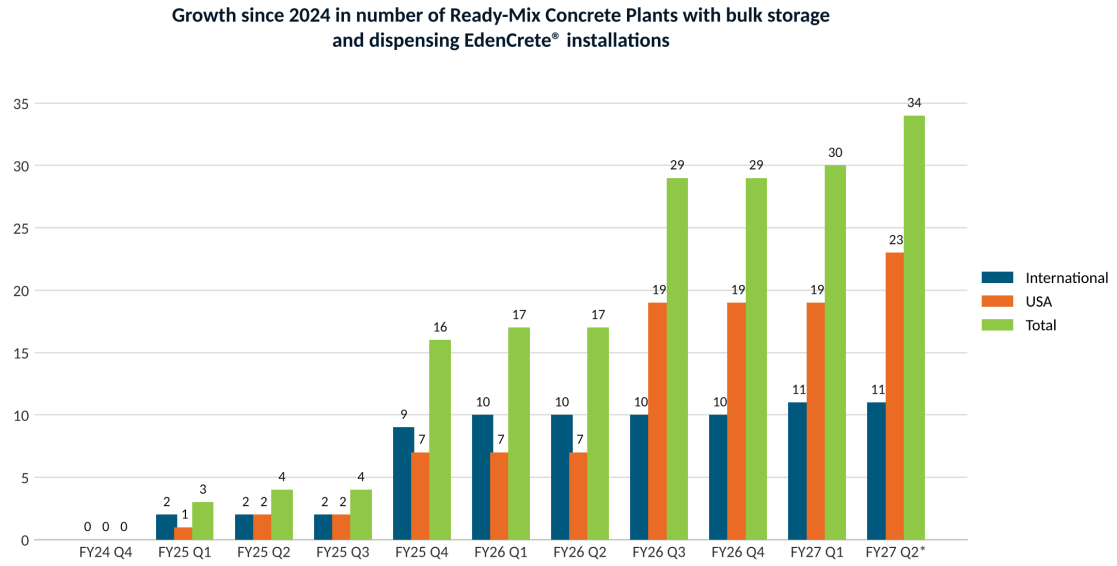
In total, the EdenCrete® orders received in the first seven weeks of the December 2026 quarter are more than four times Eden US's total sales of EdenCrete® products for the whole of the September 2026 quarter.

Growth in Bulk Storage and Dispensing Installations

Since 30 September 2026, Eden US has completed four new EdenCrete® bulk storage and dispensing installations at ready-mix concrete plants:

- two in Colorado, being the two installations scheduled for October 2026 that were referred to in Eden's ASX announcement of 5 October 2026; and
- two further installations in Texas.

This brings the number of ready-mix concrete plants with EdenCrete® bulk storage and dispensing installations to 34. The growth since 2024 in the number of ready-mix concrete plants with EdenCrete® bulk storage and dispensing installations is shown below:



* FY27 Q2 shows installations completed as at 18 November 2026.

These installations enable a ready-mix concrete plant to dispense accurately the relatively low dosages of EdenCrete® products used in its concrete mixes. Each new installation is accompanied by a small starter volume order, and it typically takes several months for a plant to optimise dosages and mix designs before EdenCrete® is fully integrated into its daily operations.

Plants with installations typically become regular users of EdenCrete® products and place replenishment orders as their use increases, as demonstrated by the orders received during the period, all of which came from plants with existing installations.

Commentary

Eden's Executive Chairman, Gregory H. Solomon, said:

"The orders received in the first seven weeks of the December quarter demonstrate the strong and growing demand for EdenCrete® products from ready-mix concrete plants that have installed our bulk storage and dispensing systems. Each new installation adds to a base of plants that place regular, recurring orders, and we are pleased to see the number of installations grow to 34."

Conclusion

The strong level of EdenCrete® orders received in the first half of the December 2026 quarter, all from ready-mix concrete plants with existing bulk storage and dispensing installations, together with the growth to 34 installations, reflects continued strong demand for EdenCrete® products and supports Eden's strategy of building recurring, plant-based demand in its key markets. Eden will report its full sales for the December 2026 quarter in its quarterly activities report.

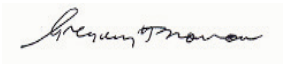
EdenCrete® Products Background

Eden's three EdenCrete® products are all 100% owned, proprietary nano-carbon-strengthened concrete additives that enhance a wide range of performance characteristics of the concrete. These benefits may include: compressive strength, flexural strength, tensile strength, abrasion resistance, reduced permeability, increased modulus of elasticity, reduced shrinkage. Collectively, these benefits can deliver stronger, tougher, more durable and longer lasting concrete that has frequently been shown in a growing number of trials to result in longer service life and hence a lower life-cycle carbon footprint of the concrete.

EdenCrete®Pz and EdenCrete®Pz7 are most frequently (but not always) used in concrete mixes that incorporate higher percentages of pozzolans as an alternative cementitious material (including fly-ash and blast furnace slag, which are each waste by-products from coal fired power stations and metal smelting respectively, thereby each being treated, as a waste by-product, as having a zero Greenhouse Gas footprint from its production process).

As a result, EdenCrete®Pz and EdenCrete®Pz7 have repeatedly shown they enable a material proportion of the total Portland cement in concrete mixes to be replaced by the same percentage of pozzolans (which is usually cheaper and has a far lower Greenhouse Gas footprint) without any loss in performance of the concrete, resulting in a cheaper, comparable concrete mix with a reduced Greenhouse Gas footprint.

Since 2015, EdenCrete® products have been sold in the USA and more recently in a growing number of other countries. They have successfully and repeatedly delivered a wide range of benefits when incorporated into concrete used in many different applications, including low-rise, medium-rise and high-rise building construction, roads and bridges, airports/ports/marine/coastal applications, bus stations, carparks, water pipes, hardstand areas, waste transfer stations, warehouses, shotcrete applications, stadiums, and pre-stressed and pre-cast concrete products.



Gregory H. Solomon
