Nobel have listened to what our mining partners have told us and we understand the job that you need to get done.

In the past, engineers at remote locations had no choice but to use packaged explosives in applications better suited to bulk products. Building a bulk emulsion plant during the first few months of construction has been out of the question — **until now.** Using Dyno Nobel's unique approach, we can respond to our customers' need for bulk emulsion on site using our breakthrough, patented technology.

With this practical innovation, Dyno Nobel can provide high quality bulk emulsion in remote locations where raw materials may be difficult to source. In addition, we have developed the ability to use melt grade ammonium nitrate sourcing to facilitate a bulk product supply chain in remote areas – **without a waste stream!** We can rapidly construct our portable emulsion plant to offer reliable technology that will get you to work - **fast!**
