First Shipment of B-01 Headphones Expands Auracast Suite

Highlights

- **First shipment of B-01 Headphones to a market-leading conference audio provider marks a major new milestone for the Auracast portfolio**
- **B-01 Headphones are designed specifically to complement and round out Audeara's existing Auracast product suite**
- **Adds an over-ear headphone option alongside Audeara's broadcast infrastructure and personal listening devices, expanding the broader customer base**
- **Extends Audeara's individual-listening expertise into a new group-listening market, building on education and retirement-living deployments**
- **260 units of B-01 Headphones successfully delivered as an advanced order to meet customer event demand.**
- **Shipment follows agreement with The University of Queensland and Bolton Clarke catering to 65 lecture theatres and 43 retirement villages**

Audeara Limited (ASX: AUA | OTCID: AUDRF) ("Audeara" or "the Company") is pleased to advise that its maiden shipment of B-01 Headphones, designed specifically to complement and round out the Company's existing Auracast™ product suite, has been delivered.

The first shipment of 260 pieces is to a market-leading conference audio provider, supporting Audeara's strategy to make optimised and accessible group listening available across a broader range of shared-listening environments. This first shipment is to be followed by larger shipments to this group and others in Australia and in international markets.

The B-01 Headphones add an over-ear headphone option to Audeara's Auracast portfolio, complementing the Company's Audio Broadcaster and other compatible personal listening devices. This provides another way for people to access shared audio, including those who do not have a suitable personal Auracast receiver.

Audeara's Audio Broadcaster uses Bluetooth® LE Audio Auracast™ technology to transmit shared audio to compatible devices without individual pairing. The addition of B-01 Headphones broadens the listening options within that ecosystem, bringing together broadcast infrastructure and an over-ear receiver designed for group listening.

From individual listening to a shared-listening market

The B-01 Headphones extend Audeara's focus on high-quality individual listening experiences into an emerging market for optimised and accessible group listening. By complementing the Company's existing broadcasters and personal listening devices, they give venue operators another way to include people in the same audio experience, with an over-ear option for those without their own compatible receiver.

Audeara sees the expanding network of Auracast-enabled spaces as an opportunity to serve both sides of this market: the infrastructure that broadcasts shared audio and the devices people use to hear it. As more locations support direct audio, a broader choice of receivers can make those installations useful to more people. This creates potential for the Company's suite across education, retirement living, conferences and other shared-listening settings, while building on its established individual-listening business.

The Company's work with The University of Queensland and Bolton Clarke demonstrates this progression in practice. UQ's March 2026 public announcement reported Audeara Auracast transmitters installed in 65 lecture theatres, with compatible listening devices available for students. Bolton Clarke announced a partnership to introduce Auracast across its 43 retirement villages, beginning at Carrington in Queensland. These are examples of shared-listening adoption, and are representative of the use cases for which the B-01 was designed with industry feedback.

The first shipment of B-01 Headphones to the conference-audio sector adds a further pathway for Audeara to participate in this developing market. The Company's objective is to build on its network of listening environments and commercial relationships, enabling more people to

benefit from shared audio while creating opportunities across its complementary product range.

Audeara Managing Director and CEO, Dr James Fielding, said:

> "The first shipment of our B-01 Headphones represents an important step in expanding Audeara's Auracast offering into the conference audio market. We've already seen what Auracast can make possible in education and retirement living. The B-01 Headphones build on that work by giving venues an over-ear listening option alongside the infrastructure that broadcasts the audio.
>
> "We believe broader adoption of Auracast depends on having both the broadcast infrastructure and a range of devices people can use to listen. Bringing those together is where we see the opportunity for Audeara in conference audio and other shared listening environments."

The first shipment is not material to Audeara's financial performance. With the B-01, Audeara can supply venue operators with both the equipment to broadcast audio and the headphones their audiences use to hear it. Audeara expects this capability to support growth in its group-listening business in Australia and internationally. Future orders and revenue will depend on customer adoption and commercial agreements.
