26 November 2026

BARLEE GOLD DRILLING UNDERWAY

HIGHLIGHTS

- **2,500m RC drilling program** has commenced at the 100% owned Barlee Gold Project
- Drilling to focus on **Astro, Astro West and Odie** following up on **strong results** reported from two previous drill programs which included
  - **Astro: 15m @ 1.62g/t Au** from 154m, including **1m @ 20.16g/t Au**.
  - **Astro: 8m @ 2.60g/t Au** from 50m, including **4m @ 4.50g/t Au**.
  - **Odie: 6m @ 1.1g/t Au** from 33m.
- Drilling designed to test the **continuity and extensions** of gold mineralisation initially identified within **broad, high amplitude gold-in-soil anomalies**.
- **Infill and extensional geochemical sampling** commences this week across the recently announced **3.8km long gold anomaly north of Astro**.
- Tenure under application to the south represents a +100% increase in tenure and will be covered with UFF soil geochemistry once granted

Duketon Mining Limited (ASX:DKM) ('Duketon' or the **'Company**) is pleased to announce that drilling has commenced at the Company's 100% owned Barlee Gold Project (**Project**).

The program, with approximately 2,500m of RC drilling planned represents the third drilling campaign undertaken at the Project and is designed to test extensions to the mineralised intercepts identified during the two previous drill programs (see ASX announcements 23/06/2026, 01/07/2026 and 26/10/2026). All planned drill holes are located within the envelope of the previously reported **high amplitude "gold in soil" anomalies** (see ASX announcement 10/08/2026), providing an opportunity to **test extensions and continuity of gold mineralisation** beneath and along these geochemical anomalies.

Non-Executive Director Stuart Fogarty commented *"The Barlee project continues to grow and mature as we gather more information through the drill bit and soil sampling. This drill program represents our continued and growing confidence in the*

Astro and Odie prospects and our belief that they will continue to deliver high grade gold.

Importantly, drilling at Astro has confirmed gold mineralisation over a strike extent exceeding 450 metres, within a much larger 1.8-kilometre gold-in-soil anomaly. When you couple this with the most recent announcement regarding another 3.8km long geochemical anomaly to the north of this the scale of the opportunity becomes clear.

We are excited about this drill program and the follow up geochemical sampling. This is another step towards identifying further high-priority targets and unlocking the considerable exploration potential of the Barlee Gold Project."

Next Steps

- Complete follow-up RC drilling at Astro, Astro West and Odie.
- Complete infill and extensional geochemical programs to the north of Astro.

This announcement has been authorised for release to the ASX by the Board of Duketon Mining Limited.

Competent Person Statement:

The information in this release that relates to exploration results is based on historical and current information compiled by Ms Kirsty Culver, Member of the Australian Institute of Geoscientists (AIG) and an employee of Duketon Mining Limited. Ms Culver has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity that is being undertaken to qualify as a competent person as defined in the JORC Code 2012. Ms Culver consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

Validity of Referenced Results

The information in this report that references previously reported exploration results have been extracted from the Company's ASX market announcements released on the date noted in the body of the text where that reference appears. The previous market announcements are available to view on the Company's website or on the ASX website (www.asx.com.au). The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.
