

Environmental Services

Waste Chemicals

DGL recovers, treats, and safely disposes of hazardous waste materials, offering sustainable solutions for our customers' end-of-life products and waste streams.

Our waste treatment plants process a number of classes of dangerous goods and expired or used goods, including:

- Fluid waste
- Wash water
- Sewage
- Water & Mining industry waste
- Acidic and caustic waste
- Pesticides
- Crop Protection industry waste
- Packaged waste
- Drum waste
- Automotive waste
- Galvanising waste
- Spent pickle liquor
- Hydrated lime
- Brewery waste
- Chemicals, and more

We also offer tailored transport services to collect and safely transport hazardous waste materials. We work closely with the EPA, waste facilities, sustainability initiatives, and our customers to develop innovative ideas and actions to ensure that our customers' products are recovered, recycled, neutralised, or disposed of in the most eco-friendly manner possible.

Partnering with DGL provides customers with sustainable solutions for their supply chains. Contact our [Environmental team](#) today.

Lead Recycling

DGL offers lead-acid battery recycling services to the automotive industry as part of our comprehensive hazardous waste and environmental services. These services are aimed at supporting our growing sustainability offerings and ensuring the safety of our communities and environment.

As one of the leading recyclers of used lead batteries across Australasia, we process up to 40,000 tonnes each year and recycle up to 95% of each battery before reselling battery components back into the market to create new products.

The items we resell from the recycled batteries, include:

- Lead Paste
- Lead Grid
- Lead Bullion
- Polypropylene Plastic

When customers choose DGL, they know they are partnering with a company committed to finding sustainable solutions and dedicated to creating a circular economy for our environment, communities, and future generations.

DGL is constantly seeking new and innovative solutions for a sustainable future, with a core focus on expanding environmental and sustainability services.
