

Industries

Automotive

DGL is a leading toller of AdBlue products and automotive fluids across Australia and New Zealand. Our full-service capability and commitment to high-quality products has built and maintained long-standing relationships with major brand owners and prime industry customers.

AdBlue Formulation

DGL is the proud owner and manufacturer of the AUSblue product range, the leading brand of AdBlue products and ancillary services across the Oceania region. AUSblue is best known for its superior quality of urea in fully formulated products, which ensures reliability and consistency for our prime industry customers across mining, transport, crop protection industries and more.

In addition, DGL offers third-party private label productions for major brand owners looking to add a high-quality AdBlue range to their product portfolio.

Automotive Fluids

DGL is a major producer and contract manufacturer of automotive fluids for brand owners and prime industry customers. We offer full-service capabilities and centralised operations to manage all steps of the production process from concept to delivery.

Product Development

Our team of automotive fluid specialists assists clients through all steps of the product development process, including concept, design, classification, regulatory compliance, prototyping, formulation development, packaging design, and scalable pilot productions.

Our state-of-the-art laboratories allow for customisation of blends, and ensure consistent, high-quality reproductions of customer orders.

Procurement

We have a dedicated team to globally source raw materials and products specific to the automotive industry. We can also manage international shipments internally via our international logistics department.

Tolling and Contract Manufacturing

Specialists in toll manufacturing for the automotive industry, we have capabilities in multiple locations across Australia and New Zealand to produce a variety of products including corrosion inhibitors, coolants, lubricants, truck and car wash, degreaser, detergents, fuel treatments, brake fluids, solvents and many more.

Find out more about our chemical [manufacturing](/manufacturing/) (</manufacturing/>).

Labels & Packaging

DGL has its own graphic design, label printing and branded packaging department. Managing our customers' assets internally centralises all steps of the process to minimise errors with artwork varieties and batches, whilst relieving customers of the burden of managing third-party suppliers. Through this process, DGL can also ensure adequate label compliance is achieved, leveraging our in-house compliance expertise.

Warehousing

DGL has a range of warehouses across Australia and New Zealand to house all classes of automotive products. Whether finished goods are being imported or customers choose to use our manufacturing services, DGL offers a wide variety of storage options.

Find out more about our [Warehousing](/warehousing-transport/warehousing/) (</warehousing-transport/warehousing/>).

Transport

The delivery of palletised automotive goods or bulk liquids and powders has never been easier with DGL's vertically integrated transport service. Covering both metropolitan and remote areas, we have a fleet suitable for the job, from tautliners to road trains.

Find out more about our [Transport](/warehousing-transport/transport/) (</warehousing-transport/transport/>).

Environmental

DGL works closely with our customers to achieve positive sustainability outcomes for the automotive products we produce. DGL's waste chemical treatment plants process most classes of automotive fluids with further expansion and sustainability initiatives being a core focus of our business.

Furthermore, DGL works closely with customers to implement and work with APCO guidelines on sustainable packaging initiatives.

DGL also caters for the safe disposal and recycling of used Lead acid batteries.

Construction

DGL is a primary toll and contract manufacturer for the construction industry, working with leading global brands and industries to develop, manufacture, store, and deliver a wide range of construction products and materials in liquid and powder form.

Product Development

Our team of construction product specialists assist clients through all steps of the product development process, including concept, design, classification, regulatory compliance, prototyping, formulation development, packaging design, and scalable pilot production.

Our state-of-the-art laboratories allow for the

development of customised blends and ensure consistent, high-quality reproductions of customer orders.

Procurement

We have a dedicated team that globally sources raw materials and products specific to the construction industry. Our international logistics department also manages international shipments.

Tolling and Contract Manufacturing

As specialists in toll manufacturing for the construction industry, we operate facilities in multiple locations across Australia and New Zealand to produce a variety of products including adhesives, latex, primers, screeds, filling and feathering compounds, levellers, binders, pointing materials, roof repair, sealers, waterproofing, paints, concrete, and much more.

Labels & Packaging

DGL has its own label printing and branded packaging department. Managing our customers' assets internally centralises all steps of the process to minimise errors with artwork varieties and batches, whilst relieving customers of the burden of managing third-party suppliers. Through this process, DGL can also ensure adequate label compliance is achieved, leveraging our in-house compliance expertise.

Warehousing

DGL has a range of warehouses across Australia and New Zealand to house construction products. Whether materials have just arrived from offshore, or customers choose to use our manufacturing services, DGL has a wide range of storage options available for our customers.

Transport

The delivery of construction products in bulk or palletised form has never been easier with DGL's vertically integrated transport service. Covering both metropolitan and remote areas across Australia and New Zealand, we have a fleet suitable for the job at hand.

Environmental

Customers who choose DGL are partnering with a company committed to sustainability. DGL works closely with customers to implement APCO guidelines on sustainable packaging initiatives and offers additional water treatment services.

Crop Protection

DGL is proud to have built long-standing relationships with leading crop protection brands and businesses across Australia, New Zealand and globally. Crop protection products are one of the key specialised industries that we serve.

Our full-service capability and strategic positioning provide our customers a centralised operation to manage every step of the process, from concept to delivery, while continually focusing on cost efficiency and sustainability improvements.

Product Development

Our team of chemists and industry specialists assist clients through all stages of product development, including concept, design, classification, regulatory compliance, prototyping, formulation development, packaging design, and scalable pilot production.

Procurement

We have a dedicated team to globally source raw materials of products specific to the crop protection industry. Additionally, DGL manages shipments internally utilising our international logistics department with customs brokerage and freight forwarding capability.

Tolling and Contract Manufacturing

As specialists in toll manufacturing for the crop protection industry, we operate facilities in multiple locations across Australia and New Zealand to produce a diverse range of products including pesticides, herbicides, fungicides, insecticides, termiticides, adjuvants, wetting agents, growth promoters, fertilisers, biologicals, enhancers, and more.

These products are available in various liquid formulations such as suspended liquid (SL), emulsifiable concentrate (EC), suspended concentrate (SC), and micro-emulsion (ME).

Additionally, we offer solid-type formulation processing in the form of powders and granules. DGL also offers customised services such as mixing, bagging, and down-packing.

Warehousing

Whether our customers' products are manufactured in one of our specialised facilities or arrive from third party suppliers, we understand that our customers have an ongoing need for reliable inventory storage solutions. DGL has licensed warehouses to cater to and store all classes of crop protection products across Australia and New Zealand.

Find out more about our [Warehousing \(/warehousing-transport/warehousing/\)](/warehousing-transport/warehousing/).

Transport

DGL has all your transport needs covered, whether for palletised goods or bulk liquids and powders. Our vertically integrated transport services make it seamless to move crop protection products between ports, warehouses, customer delivery points, or even to collect waste materials.

Find out more about our [Transport \(/warehousing-transport/transport/\)](/warehousing-transport/transport/).

Environmental

DGL is a registered member Crop Life Australia.

We support Drummuster and other end-of-life crop protection programs. DGL's waste chemical treatment plants process various classes of crop protection products, with further expansion and sustainability initiatives being a core focus of our business.

Mining

DGL provides a range of water management services, products and supply chain solutions to the mining industry, including field testing, lab testing, treatment, product formulation, manufacturing of chemicals, product storage and transport, dosing solutions, and safe neutralisation and disposal of waste. We also offer a complete suite of chemical products tailored for the mining industry, including mine equipment fluids, acids, and more.

Our wide range of mining services cover:

- Water Treatment
- Tailings
- Dewatering
- Flotation Reagents
- Antiscalants
- Dust Suppressants
- Telemetry
- Monitoring
- Water Correction
- Water Improvement
- Dosing Units
- Leaching
- Oxidation
- pH Control & Modifiers

Our wide range of mining products include:

- Coagulants
- Flocculants
- Filters
- Filtration Agents
- Cooling Inhibitors
- Biocides
- Mining-grade AdBlue, Coolants, and Mine Machinery Fluids
- Cleaning Fluids and Detergents
- Advanced Chemical Products

DGL's mining industry team consist of technical sales engineers with extensive experience in mining operations, technical process improvements, and delivery of cost saving initiatives for our partners. We provide customers with strategically located facilities across metropolitan and remote areas of Australia and New Zealand to ensure dedicated and timely service.

Water

DGL is an expert in the water industry, providing a suite of services and supplies, including field testing, lab testing, product formulation, manufacturing of chemicals, product storage and transport, dosing solutions, and the collection, neutralisation, and safe disposal of waste.

Our range of water services covers:

- Tailings
- Dewatering
- Telemetry
- Monitoring
- Water Correction
- Water Improvement
- Dosing Units
- Odour Control
- Leaching
- Disinfection
- Oxidation
- pH Control

- Clean Water Treatment
- Sewage Treatment
- Pool Care
- Chemical Manufacturing, Transport, Storage, Waste Collection, and Neutralisation

Our range of water products includes:

- Coagulants
- Flocculants
- ACH Technology
- Phodine
- Filters
- Filtration Agents
- Cooling Inhibitors
- Biocides
- Special Blends
- Advanced Products

Our team has expert knowledge in the water industry.

We provide customers with strategically located facilities and state-of-the-art laboratories across metropolitan and remote areas of Australia and New Zealand. This ensures dedicated and timely service to their technical requirements and supply chain solutions.
