

QUARTERLY ACTIVITIES REPORT FOR THE PERIOD ENDED 30 SEPTEMBER 2025

31 October 2025

Peako Limited (ASX: PKO) (**Peako** or **the Company**) is pleased to provide its Quarterly Activities Report for the three months to 30 September 2025.

East Kimberley Tenements

Peako’s exploration activities are focused on its ground-holding in the East Kimberley region of Western Australia (**Figure 1**).

The project area is situated within the Halls Creek Orogen, an-established mineral province characterised by diverse geological settings that have supported the development of multiple mineralisation styles. The region remains under-explored in areas of structural complexity and cover, highlighting the opportunity for modern systematic exploration to refine targets and enhance geological understanding.

Peako’s tenements host geological units from both the Koongie Park Formation and the Lamboo Ultramafic Belt. These sequences represent a Paleoproterozoic succession intruded by granitoid phases and deformed through several orogenic events, providing a geological setting known to be prospective for a range of base, precious and critical metals.

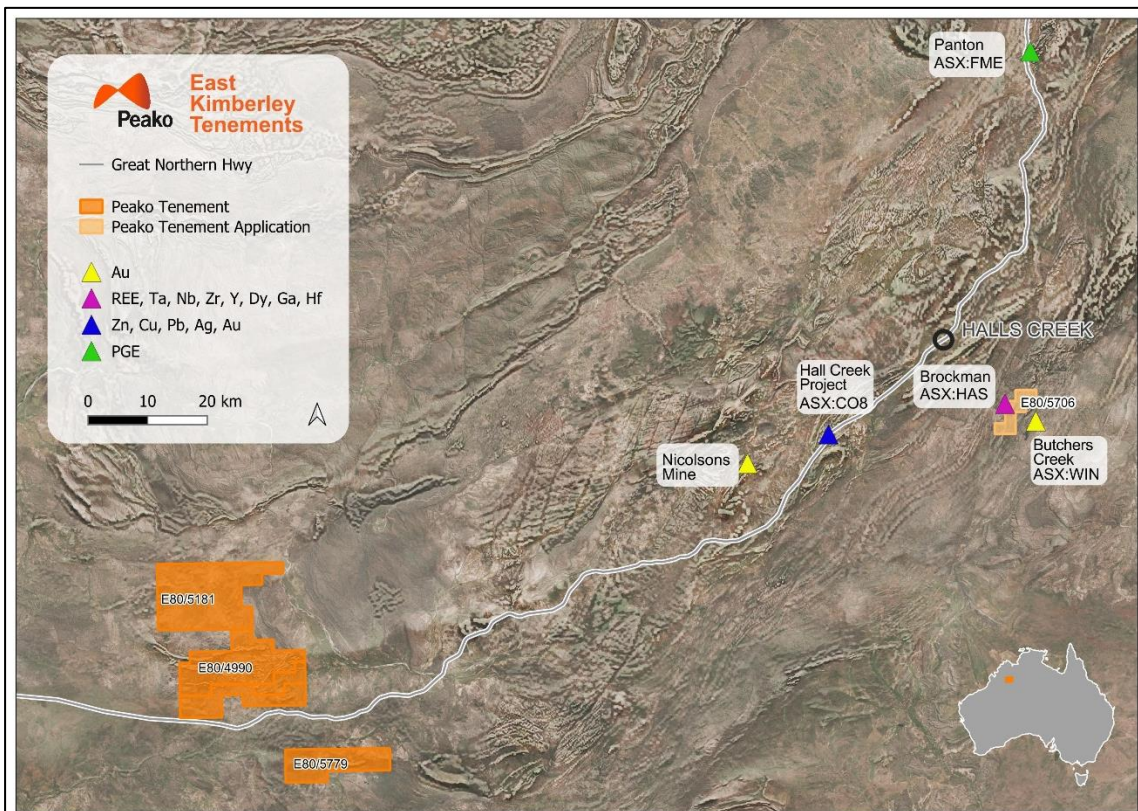

Figure 1. Peako’s East Kimberley tenement package.

Multiple mineralisation styles have been identified within Peako's tenements, including structural / shear hosted to intrusion-related gold systems and magmatic Cu-Ni, and ultramafic-hosted PGE, supporting a multi-commodity exploration approach.

During the quarter, Peako undertook a desktop geological review over its Wirana tenement (E80/5182). This work focused on consolidating available geological and historical datasets to improve understanding of the northern extension of prospective sequences already recognised to the south.

The review is underpinned by detailed mapping and a tectono-stratigraphic architectural study completed across the adjoining Eastman tenement (E80/4990) in 2023. That work refined key stratigraphic boundaries, clarified structural relationships relevant to potential mineralising systems, and confirmed the presence of multiple ultramafic intrusion horizons. Applying this framework within E80/5182 has highlighted locations where structural trends correspond with previously recorded mineral occurrences. Planning is underway to evaluate these areas through reconnaissance and ground validation.

The Company has also commenced an assessment of opportunities associated with its application area E80/5706. This area lies adjacent to the Brockman Rare-Earths Project, which is owned by Hastings Technology Metals Limited and recognised as Australia's largest heavy rare-earths (HREO) project. Brockman hosts a JORC Indicated and Inferred resource of approximately 41.4 million tonnes at ~2,100 ppm TREO¹ (including ~1,800 ppm HREO), ~3,590 ppm Nb₂O₅ and ~8,990 ppm ZrO₂. It also contains large resources of the rare metals Tantalum (Ta), Hafnium (Hf) and Gallium (Ga).

Corporate

Business Development

Peako continues to review new project opportunities, primarily precious and base metals, both in Australia and overseas, to complement its Eastman Project and to drive value to shareholders. Discussions and due diligence are on-going with several opportunities, but no decisions have been made at this stage.

This announcement is approved by the Board of Peako Limited
