

Gradient Array IP Survey Commences at Yandal West

Albion Resources Limited (ASX: ALB) is pleased to advise that a Gradient Array Induced Polarisation (IP) Survey has commenced at its Yandal West Project, located in the highly prospective **Yandal Greenstone Belt**, Western Australia.

The program will assist in identifying **disseminated sulphide and quartz silica** often associated with gold mineralisation ahead of the upcoming drill campaign.

The survey will cover two high-priority areas:

- May Queen – approximately **2.5 km × 1 km**; and
- Ives North – approximately **2.0 km × 1 km**, an undrilled target area (a priority for a Jan-Feb 2026 drill campaign).

Figure 1 and 2: Gradient Array IP Survey Commenced

Why This Matters

The survey adds another valuable dataset to Albion's growing understanding of the Yandal West Project, supporting refined drill-hole targeting and enhancing the potential for near-term discoveries.

What's Next?

- **Drill planning underway** for priority targets.
- **RC drilling scheduled to commence in mid-November 2025.**
