

## AUCU PROJECT – INITIAL SITE WORKS COMMENCED

**Triton Minerals Limited** (ASX: TON) (“**Triton**” or “the **Company**”) is pleased to provide an update on the commencement of initial field activities at the Aucu Gold-Copper Project (“Aucu” or “the Project”) in Mozambique, following the Company’s ASX Market Update on 3 November 2025.

### **Government & Community Engagement Completed**

During the initial mobilisation phase, Triton representatives met with relevant provincial and local government officials, together with community leaders in the region.

The Company is pleased to confirm that all meetings were positive and constructive, with Government stakeholders and the local community expressing strong support for the Project and its planned exploration activities. This endorsement allows Triton to progress its operational program as planned.

### **Site Preparation Underway**

Following mobilisation, the onsite team has commenced early works, including:

- selective clearing of initial access tracks and immediate working areas,
- identification of priority locations for planned geological investigation, and
- basic site preparation to support the early mobilisation phase

These works are proceeding safely and in line with the Company’s anticipated schedule.

Figure 1 – Initial site preparation undertaken at Aucu, including light clearing and grading to establish access for early field activities.

### Sampling and Early Drilling Activities

As part of the first phase of field work, the team has collected a series of surface rock samples from key outcrops across the initial target area. These samples will undergo laboratory analysis to assist with refining priority drilling zones.

Figure 2 – Rock chip samples from the targeted area, including quartz-vein material (MTZ025, left) and oxidised, iron-rich breccia-style material (MTZ036, right). A Mozambican metical coin is included for scale.

The Company has commenced its planned first-stage drilling activities at Aucu. Some early operational adjustments have been required, which is not unusual at the beginning of a new program, and drilling is continuing. Further updates will be provided as the program advances.

### **Next Steps**

Triton will continue to complete the initial field tasks presently underway at Aucu and will assess next steps once results from this phase are reviewed. Further updates will be provided as material outcomes emerge.

The ASX announcement was authorized for release by the Directors of the Company.
