

Canola

Nufarm has a proven portfolio of canola, sorghum and sunflower seed developed specifically for your fields and market opportunities. Giving you better growth, all year round.

Canola

Nufarm's innovative seeds solutions help protect the world's natural resources and empower farmers with new economic opportunities.

At our Innovation Center in Horsham, we have developed an elite blackleg resistant seed, as well as new HyTTec, Truflex, and Monola hybrids with the heart-healthy oil profile now mandated across the country. Globally, we are using our best-in-class germplasm to deliver locally proven hybrids for growth, focusing on the European, North American, and South American markets.

Top-performing genetics, expertise, and collaboration have also enabled us to produce Omega-3 Canola – the world's first plant-based source of omega-3 for human nutrition and animal feed – takes the pressure off the world's wild fish stocks and oceans and can double the world's supply of omega-3, essential for good health.

It's the first land-based source of the essential nutrient and we are commercially producing it in the U.S. for aquafeed.
