Verbrec secures over \$20 million in new contracts

Verbrec Limited (ASX : VBC) (**Verbrec** or the **Company**) is a leading engineering, asset management, project delivery, operations & maintenance, industrial automation, digital transformation and mining technology service provider that supports customers across Australia, New Zealand, Papua New Guinea and beyond.

Verbrec provides the following business update, with a selection of notable projects in this announcement which have been awarded in H1 FY2026, with a total value exceeding **\$20 million** in its core transition markets and focus areas for growth. The awarded contracts are a mix of individual and multi-year contracts across a range of sectors.

Verbrec has four transition markets that it focuses on, each a growth area for Verbrec and an important element of sustainability for Australia, New Zealand and the Pacific communities, businesses and industries.

Verbrec is recognised as the engineering partner of choice for biogas developments

The Verbrec engineering team have secured a project in New Zealand to deliver a detailed feasibility study for a new biogas facility to be constructed in Auckland.

This project comes at a pivotal time for New Zealand's energy transition as biogas and biomethane gain further traction.

Verbrec is well placed to be an engineering partner of choice in the evolving energy landscape and has built a solid reputation in the biogas and biomethane sector.

Australia is moving in the same direction, with New South Wales recently extending incentives to renewable gas to close the gap between production costs and sale price as producers look to scale their production capacity.¹

Verbrec previously provided engineering and construction support to Clarus' First Renewables for New Zealand's Broadlands Biogas Upgrade, a landmark project transforming kerbside waste into a valuable source of renewable gas, the first facility of its kind in New Zealand.

These awards reinforce Verbrec's focus on **Gas Market Transition**, a core transition market that Verbrec serves.

Alliance Automation's operational technology and cyber security capability is a growth area of focus for Verbrec

Verbrec acquired Alliance Automation in December 2025.

Alliance Automation's operational technology and cyber security divisions have been engaged by a prominent energy company to conduct a cyber security risk assessment under the Australian Energy Sector Cyber Security Framework at one of their large-scale battery energy storage systems (BESS) sites in Queensland.

This important work is required by legislation and regulatory frameworks and has resulted in a variety of recommendations to ensure secure and sustainable energy infrastructure.

Alliance Automation is currently engaged to implement the recommendations from their report including design works, development of security policies and procedures and implementation of operational technology and cyber security enhancements.

It is expected that this work will lead to awards for future BESS sites owned by the prominent energy company.

Alliance Automation has undertaken similar cyber security risk assessment work at food and beverage production facilities and mining operations in FY2026.

Alliance Automation is a turn-key, whole of life-cycle provider of operational technology cyber security solution and is well placed to be awarded further works that flow from the initial risk assessment projects.

These awards reinforce Verbrec's focus on **Electrification & Energy Storage**, a core transition market that Verbrec serves.

Verbrec is a trusted leader in pipeline engineering, operations and maintenance

Verbrec was awarded an extension of its long-standing operations and maintenance contract for the Cheepie to Barcaldine Gas Pipeline in Queensland for four years initially with up to three years extension.

Verbrec has additionally secured the operations and maintenance contract for Senex' Mimas pipeline in Queensland.

Verbrec operates over 2,000KM of gas pipelines across Australia. Verbrec's operations and maintenance contracts are multi-year and contain a tranche of fixed services required to meet industry and infrastructure regulations. This is a source of ongoing and reliable revenue for Verbrec. In general, for each dollar in fixed services under the multi-year operations & maintenance contracts, Verbrec receives an additional dollar for reactive maintenance and brownfields construction services.

These awards reinforce Verbrec's focus on **Gas Market Transition**, a core transition market that Verbrec serves.

Verbrec continues to support BHP mines and ports stockpiles in WA with StacksOn

StacksOn is a digital twin for stockpiles and a 3D modelling application that enables the visual tracking of material and grades in near real time and in an intuitive way.

StacksOn is used at every BHP iron ore mine and port in Western Australia.

Verbrec was recently awarded a 36-month extension to the StacksOn software license at BHP mines and ports. Additionally, Verbrec provides support services on an ad-hoc basis at recoverable consultancy rates across the life of its software license agreements.

StacksOn is also being used to support initial concept studies to inform grade and stockpile efficiencies at several other iron ore and bauxite mines in Australia. It is Verbrec's aim to convert these value-add services to additional software license revenues in the future.

These awards reinforce Verbrec's focus on **Sustainable Mining**, a core transition market that Verbrec serves.

Verbrec supports sustainable resources by serving major copper mining operations

Verbrec has increased its focus on supporting the copper mining sector due to its favourable long-term demand forecasts and increased capital investment.

Verbrec has secured sustaining surface power project at Olympic Dam, supporting this critical energy infrastructure project, pivotal to sustainable energy production and distribution at Olympic Dam.

Verbrec's Asset Management business has also secured a project to deliver operational readiness support for the Prominent Hill expansion project whilst Verbrec engineering continues to supply services to Olympic Dam on electrical, power and water processing projects in the half-year.

Verbrec Engineering and Alliance Automation have several high calibre technical personnel seconded into various operational divisions within BHP, supporting the increased operational demand in the copper mining sector in South Australia.

These awards reinforce Verbrec's focus on **Sustainable Mining**, a core transition market that Verbrec serves.

Verbrec continues to secure important projects in water security for utilities, mining and defence

Verbrec is reputable in the supply of electrical, instrumentation and controls projects for SA Water in South Australia, supporting critical water processing and treatment facilities in the region, including several major switchboard design and manufacturing projects.

Alliance Automation, similarly, has a strong reputation in the water sector and has been awarded a SCADA unification project for a major Queensland water utility. The project will enable early detection and prevention of operational incidents by migrating existing networked water and waste-water systems from a legacy SCADA system to a new SCADA system. This turn-key project involves a territory-wide analysis and will result in a standardised water control system across a large array of water assets operated by the utility.

Alliance Automation has also been awarded the contract to upgrade existing pump stations at a defence site in South Australia. The project involves upgrading the pump skids, replacing the electrical switchboards and other electrical control infrastructure and generally upgrading obsolete communication systems with 4G network infrastructure. This project will safeguard the water supply for the township that supports the defence site.

The Company's strong background in water security extends to the mining sector, where the long-term sustainable use of water in its production is critical to operations, including during H1 FY2026, supporting a dewatering pump station project at Olympic Dam.

These awards reinforce Verbrec's focus on **Water Security**, a core transition market that Verbrec serves.

Non-material individual contracts disclaimer

Verbrec considers the overarching content of this announcement to be market sensitive given it provides an aggregation of project awards which may be used, in part, to inform a view of revenue, sales pipeline conversion or profit performance of the Company.

However, the individual contracts referred to in this announcement are not considered by the Company to be of sufficient size individually to be considered financially material or market sensitive as that term is defined under ASX Listing Rule 3.1 and Guidance Note 8.

The terms of the contracts are customary, and the names of the counterparties are also non-material. Consistent with ASX Listing Rule 3.1, these do not warrant specific disclosure by the Company. Verbrec considers this announcement to contain all material information relevant to assessing the impact of these contracts on the price or value of the entities securities and does not consider any part to be misleading by omission.

Authorised for release by the Board of Directors of Verbrec Limited.

Note regarding forward looking statements

This announcement contains forward looking statements. Forward-looking statements can generally be identified by use of words such as "may", "should", "could", "foresee", "plan", "aim", "will", "expect", "intend", "project", "estimate", "anticipate", "believe", "forecast", "target", "outlook", "guidance" or "continue" or similar expressions. Forward looking statements in this announcement include statements about Verbrec's financial condition and performance.

Such statements represent Verbrec's current views with respect to future events and are necessarily based upon a number of assumptions and estimates that, while considered reasonable by the Company, are inherently subject to significant technical, business, economic, competitive, political and social risks, contingencies and uncertainties.

These forward-looking statements are based on assumptions and contingencies that are subject to change without notice and involve known and unknown risks, uncertainties and other factors, many of which are beyond the control of Verbrec and its related bodies corporate and affiliates (and each of their respective directors, securityholders, officers, employees, partners, agents, advisers and management), and could cause actual results, performance or achievements to be materially different from the results, performance or achievements that are or may be expressed or implied by such forward-looking statements or any projections and assumptions on which those statements are based.

Forward-looking statements are provided as a general guide only and should not be relied on as an indication or guarantee of future performance.

There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Verbrec disclaims any intent or obligation to update any forward-looking statements, whether as a result of new information, future events or results or otherwise. All forward-looking statements made in this announcement are qualified by the foregoing cautionary statements. Investors are cautioned that forward-looking statements are not predictions or guarantees of future performance and accordingly investors are cautioned not to put undue reliance on forward-looking statements due to the inherent uncertainty therein.
