

# High-Grade Gold from Surface Intersected by Drilling at Goongarrie

### **Highlights**

Shallow high-grade gold mineralisation spanning over a significant 1,300m strike, at the Goongarrie Gold Project, WA

High-grade results from the AC program include:

- 4m @ 6.6 g/t gold from surface
  - 4m @ 5.7 g/t gold from 12m
  - 4m @ 3.0 g/t gold from 40m
  - 4m @ 2.7 g/t gold from 5m

RC drill program is scheduled for early 2026, aimed at testing extensions of the high-grade gold zones identified during the recent Aircore program and historical drilling

Cazaly Resources Limited (ASX:CAZ)(Cazaly) or (the Company) is pleased to report receipt of assay results from recent Aircore (AC) drilling conducted at its Goongarrie Gold Project, located in the northeastern goldfields, 90km north of Kalgoorlie.

## **Anomalous Assay Results**

Initial gold assay results have been received for the expanded AC drilling program completed at Goongarrie in November 2025. 240 holes (Appendix 1 & 2) were drilled for 7,604m. An encouraging strike of high-grade gold mineralisation has now been successfully delineated over 1,300m. In addition, the drilling supports historical drill results along the mineralised trend and highlights areas for further drill testing (*Figure 1*).

Table 1. Aircore drill intercepts above 1 g/t gold.

Cazaly's Managing Director, Tara French commented:

"We continue to intersect high-grade gold mineralisation at the Goongarrie Gold Project, successfully extending mineralisation 660m south of the Star of Goongarrie prospect.

"The AC results have not only validated the historical high-grade gold intercepts but importantly, confirm the significant prospectivity across the underexplored gold bearing shear zones, generating several new high-grade gold targets.

"We look forward to commencing the RC program in early 2026, targeting high-grade extensions identified in historical and recently completed drilling.

"Success will deliver significant value for our shareholders and mark a transformative period for the Company. We look forward to keeping the market updated on the commencement of RC drilling in early 2026.

## **Expanded AC drilling program**

An initial shallow AC scout drilling programme commenced in August and focused around *Duchess, Duke of York* and north of the *Star of Goongarrie* Gold Prospects (Figure 1 & 2). Fifty-eight (58) AC holes for 2,748m were completed during this initial phase. Subsequent heavy rainfall in the following months delayed the next phase of drilling until November, when an additional 240 AC holes (Appendix 1 & 2) were drilled for 7,604m. This brings the total AC to 323 holes for 10,352m, testing 7km strike across the Menzies Shear Zone (refer to CAZ: ASX Announcement 10 October 2025 and 29 October 2025).

The AC drilling campaign has successfully highlighted a 1,300m mineralised trend >1g/t gold between Goongarrie Lady and Jenny's Reward (Figure 2). In addition, anomalous gold was intersected three kilometers north of Jenny's Reward open pit. Current data suggest the gold mineralisation trends parallel to the NNW Menzies Shear Zone and lies adjacent to magnetic anomalies and zones of structural complexity. Further drilling will be required to determine the grade continuity between intercepts. Where anomalous drilling was encountered at the end of drill lines, the lines will be extended.

Figure 1. Cazaly drill hole locations and maximum gold results.

Chip sampling of historical costeans at Masons Flat, ~600m west of Jenn's Reward, returned anomalous results with 1m @ 10.79g/t Au. This supports Cazaly's RC results previously reported for this area (refer to CAZ: ASX announcement 18 August 2025), including 6m @ 0.76g/t Au from 27m in GGRC011 and 2m @ lg/t from 58m to the end of the hole in GGRC012. Further work will be planned at Mason's Flat.

Drilling to date supports further drill testing at Masons Flat, along the Menzies Shear to the north of Jenny's Reward, and along the 1300m long mineralised trend to the north and south of Duchess. Drilling will be designed to better understand the continuity and tenor of gold mineralisation along strike of the *Duchess* prospect with anomalous gold intercepts, including 19m @ 1.5g/t gold, including 4m @ 4.7g/t gold, and the Duke of York prospect with gold anomalous intercepts, including 6m @ 10.3g/t gold and 10m @ 5.7g/t gold.

Figure 2. Drill collar locations and anomalous results across the Menzies-Boorara Shear. 1300m mineralised trend highlighted south along strike of Jenny's Reward.

### **Supporting Cazaly ASX Announcements**

The following announcements can be referenced for further information on the Goongarrie Gold project, including historical drilling results. The company is not aware of any new information or data that materially affects the information included in the original market announcements.

- 12 February 2025: Joint Venture Secured over advanced gold project in Western Australia's world class gold mining district.
- 25 March 2025: Cazaly exercises option to earn up to 80% of the Goongarrie Gold project.
- 17 April 2025: Goongarrie Gold Project update.
- 10 June 2025: Approvals granted for drilling at Goongarrie Gold project.
- 17 June 2025: RC drilling commences at Duke of York Gold prospect.
- 21 July 2025: High-grade gold intercepts identify new target at Goongarrie
- 31 July 2025: Quarterly Activities and Cash Flow Report
- 18 August 2025: Final assay results boost high grade gold at Goongarrie
- 19 August 2025: Aircore drilling commences at Goongarrie.
- 10 October 2025: Goongarrie AC Drilling Update
- 29 October. Anomalous AC drilling results at Goongarrie
- 31 October 2025: New Gold Trends Identified as AC drilling recommences

### **Goongarrie Gold Project**

Goongarrie is situated in the northeastern goldfields, 90km north of Kalgoorlie, and is easily accessible via the Goldfields Highway, which runs along the western boundary of the project area (Figure A). The Project consists of 70km² of greenstone sequence within the Kalgoorlie Terrain.

Importantly, the Project covers twelve kilometers of the Bardoc Tectonic Zone (BTZ), which is the extension of Boulder-Lefroy Shear Zone (BLSZ) to the south, one of the richest gold mineralised structures in the Yilgarn Craton. Subsequent have exploration activities identified two additional subparallel N-S structures that also have the potential to host significant gold deposits.

The tenor and economic potential of unexploited gold mineralisation in the district is supported by recent successful exploration activities, including anomalous drill results announced in February 2025, with 19m @ 18.1g/t Au and 11m @ 24.8g/t Au¹ and March 2025 with

Figure A. Goongarrie Gold project, located in the Eastern Goldfields, 90km north of Kalgoorlie.

96m @ 2.5g/t Au, including 20m @ 6.1g/t Au<sup>2</sup> at Gorilla Gold's nearby *Lakeview* prospect at Comet Vale.

#### Cautionary Statement (historical)

The historical exploration results reported above have been sourced from the KWR historical database and public reports and may not be reported in accordance with the JORC Code. The historical information is an accurate representation of the available data for the project, sourced to date.

<sup>&</sup>lt;sup>1</sup> 28 February 2025. Gorilla Gold Limited ASX announcement "Lakeview high-grade gold intercepts grow mineralisation beyond 400m strike".

<sup>&</sup>lt;sup>2</sup> 21 March 2025. Gorilla Gold Limited ASX announcement "Thick intercept and multiple lodes in down-dip drilling at Lakeview"

#### Competent Persons Statement

The information in this announcement accurately represents the available data referenced in this document. It has been reviewed by Ms. Tara French and Mr. Don Horn, who are employees of the Company. Ms Tara French and Mr Horn are both Members of the Australasian Institute of Geoscientists and have sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which they are undertaking to qualify as a Competent Persons as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. The company confirms that it is aware that the historical information may not have been reported in accordance with JORC 2012, and the more recent information was reported in accordance with JORC 2012; it is also not aware of any new information or data that materially affects the information included in the original reports. Ms Tara French and Mr Horn both consent to the inclusion of the matters based on the information in the form and context in which it appears.

#### Forward Looking Statement

This ASX announcement may include forward-looking statements. Forward-looking statements include, but are not limited to, statements concerning Cazaly's planned exploration program(s) and other statements that are not historical facts. When used in this document, words such as "could," "plan," "estimate," "expect," "intend," "may", "potential," "should," and similar expressions are forward-looking statements. Although Cazaly Resources believes that its expectations reflected in these forward-looking statements are reasonable, such statements involve risks and uncertainties, and no assurance can be given that actual results will be consistent with these forward-looking statements. The forward-looking statements in this announcement reflect views held only as at the date of this announcement.

## APPENDIX 2 JORC Code, 2012 Edition – Table 1

## Section 1 Sampling Techniques and Data

Criteria	JORC Code explanation	Commentary
Sampling techniques	Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.  Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.	A program of air core ("AC") drilling was completed at the <b>Goongarrie Gold Project</b> from the 7th November until the 20th November 2025. –60 degree angled holes were drilled at a 40m to 80m spacing on lines from 40m to 240m apart. A total of 2,175 samples were collected. Three open historic costeans at the Goongarrie Gold Project were logged and sampled in November within P29/2413. A total of 77 one metre samples were collected.  Collar positions were located with a handheld GPS with an expected accuracy of ± 3m.  1 certified (industry prepared) independent standard was inserted every 50 samples submitted. 1 field duplicate sample was collected every 50 samples submitted.
	Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information.	All samples were submitted to SGS Australia Pty Ltd laboratory in Kalgoorlie WA. Samples undergo sample preparation and determination of gold by PhotonAssay utilising approximately 400 grams of representative sample after crushing. In addition to the above analyses, at the lab the end of hole sample had a split taken for pulverising to 85% passing 75 micron, 4 acid digest and determination of: Ca, Cr, K, Mg, Na, S and Ti by ICP finish plus Ag, As, Ba, Be, Bi, Ce, Cu, Mn, Ni, Pb, Rb, Sb, Sc, Te, W, Zn and Zr by MS finish.  Samples from AC and costeans were considered representative and appropriate for the material sampled.
Drilling techniques	Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, facesampling bit or other type, whether core is oriented and if so, by what method, etc).	Air Core drilling utilised a blade air core bit or face sampling hammer for all 1m down-hole bulk samples collected.  Costeans were old excavations from previous explorers but no records of this work could be sourced by the company.

Criteria	JORC Code explanation	Commentary	
Drill sample recovery	Method of recording and assessing core and chip sample recoveries and results assessed.	Over 90% of samples were considered to have good recovery and less than 2% of samples were observed to be damp or wet.	
	Measures taken to maximise sample recovery and ensure representative nature of the samples.	The air core rig cyclone was thoroughly cleaned after each drill hole. The sample system was cleared after drilling each rod.  AC samples were visually assessed with recovery, moisture and contamination recorded into a logging template. Sample weights were regularly checked.  Costean samples were collected from the face of the excavation using a 1m piece of PVC maximising sample recovery.	
	Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material	Over 90% of RC sample recoveries were good, no bias is expected for all drilling completed.	
Logging	Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.	All drill chips were geologically logged on site by geologists following the CAZ logging scheme. With all recorded information loaded to a database and validated. The costean was geologically logged by onsite geologists.	
	Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.	Logging is qualitative with colour, lithology, and regolith noted. Photos were collected during drilling.	
	The total length and percentage of the relevant intersections logged.	All drill holes and costeans were logged in full.	
Sub-sampling techniques and	If core, whether cut or sawn and whether quarter, half or all core taken	NA	
sample preparation	If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.	1 metre AC drill samples fall through a rig mounted cyclone into buckets. The samples are laid out on the ground in 10m lines. A 2-3 kg composite sample is collected in a pre- numbered calico bag by scooping representative material from 1 meter sample piles. Composite samples of either 2m, 3m or 4 metres were collected by this method. An end of	

Criteria	JORC Code explanation	Commentary
		hole Im sample was collected for litho- geochemical determination.
		Costean 1m samples were collected from the face of the excavation using a 1m piece of PVC and geopick.
	For all sample types, the nature, quality, and appropriateness of the sample preparation technique	All drill samples are dried and crushed to less than 3mm and placed into Photon Assay jars. All samples are considered appropriate for this technique. In addition to the above analyses, at the lab the end of hole sample had a split taken for pulverising to 85% passing 75 micron and determination of a multielement suite.
		Costean samples were collected in a conventional industry standard manner.
	Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.	Duplicate samples were collected at the rate of 1 per 50 samples.
	Measures taken to ensure that the sampling is representative of the insitu material collected, including for instance results for field duplicate/second-half sampling.	Appropriate sampling protocols were used during costean sample collection and AC composite sampling. This included scoop collection at various angles through bulk 1 metre sample piles to maximize representivity.
	Whether sample sizes are appropriate to the grain size of the material being sampled.	Sample sizes (2kg to 3kg) are considered to be of sufficient size to accurately represent potential mineralisation present in drill chips.
		Field duplicates have been collected to ensure monitoring of the sub-sampling (composite) quality.
Quality of assay data and laboratory tests	The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.	Samples were sent for analysis to SGS Australia Pty Ltd laboratory in Kalgoorlie WA (a commercial accredited independent laboratory). All samples were analysed for gold by PhotonAssay. The element and analytical technique were selected by the company's geologists as appropriate for the Goongarrie Gold Project after review of historic drill sampling plus recent Cazaly drill results (RC).
	For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations	N/A

Criteria	JORC Code explanation	Commentary	
	factors applied and their derivation, etc.		
	Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established.	Field duplicate samples and standards were submitted with each sample batch as previously stated. The laboratory inserted standards, blanks, and duplicate samples.  Results are within tolerable limits.	
Verification of sampling and assaying	The verification of significant intersections by either independent or alternative company personnel.	All data has been checked internally by senior Cazaly staff	
	Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols  The use of twinned holes.	Field data is collected using logging software with internal validation on a Toughbook computer. Validation checks are also used when loading the data to a company MX Deposit database.  No holes were twinned in this first pass program.	
	Discuss any adjustment to assay data.	No adjustments are made to assay data	
Location of data points	Accuracy and quality of surveys used to locate drill holes (collar and downhole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.	Collar positions and trenches were located with a handheld GPS (±3m).	
	Specification of the grid system used.	All co-ordinates collected are in GDA94 – MGA Zone 51	
	Quality and adequacy of topographic control.	The topographic surface is determined from a digital elevation models and GPS survey data.	
Data spacing and distribution	Data spacing for reporting of Exploration Results.	Holes were drilled at a 40m to 80m spacing on lines from 40m to 240m apart. Holes were inclined at -60° towards the east and designed to drill approximately perpendicular to interpreted mineralisation.	
		Costeans consist of linear trench excavations on a recorded azimuth to between 1-2m vertical depth and varying lengths.	
	Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation	The data spacing and distribution is considered sufficient to demonstrate spatial and grade continuity of mineralisation at the Goongarrie Gold Project.	

Criteria	JORC Code explanation	Commentary	
	procedure(s) and classifications applied.		
	Whether sample compositing has been applied.	All samples were collected over 2-4m intervals. Samples are composited via scooping of 1m sample piles at the direction of geologists. Costeans were sampled over 1m intervals	
Orientation of data in relation to geological structure	Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.	Drilling is orientated to best suit the mineralisation and to be closely perpendicular to both the strike and dip of mineralisation.  Intercepts are considered close to true width.  Costeans were considered to be closely perpendicular to mineralisation.	
Sample security	The measures taken to ensure sample security.	Samples were stored on site, until delivery to SGS in Kalgoorlie WA. Chain of custody consignment notes and sample submission forms are sent with the samples. Sample submission forms are also emailed to the laboratory and are used to keep track of the sample batches.	
Audits or reviews	The results of any audits or reviews of sampling techniques and data.	No external audits on sampling techniques and data have been completed. A review of QAQC data was completed by company geologists	

## Section 2 Reporting of Exploration Results

Criteria	JORC Code explanation	Commentar	y 			
Mineral tenement and land tenure status	tenement name/number, and land location and ownership including agreements or		The Goongarrie Gold Project is located in the northeastern goldfields, 90km north of Kalgoorlie, and is easily accessible via the Goldfields Highway that runs along the western boundary of the project area. Cazaly has signed an Agreement with Brightstar Resources to earn an interest in the Project covering 15 tenements listed below:

Criteria	JORC Code	Commentary
Exploration done by other parties	explanation  Acknowledgment and appraisal of exploration by other parties.	The Goongarrie Project was acquired by Kingwest Resources Ltd (ASX: KWR) in 2019. In May 2023 KWR merged with Brightstar Resources Limited whose focus has now shifted away from the Goongarrie project following their recent merger with Alto Metals Ltd (ASX: AME).
		Historic work at Goongarrie includes soil sampling, trenching, auger drilling, shallow air core drilling, and RC drilling. This work targeted oxide gold mineralisation at surface associated with the Bardoc Tectonic Zone-Boulder Lefroy Shear Zone (BTZ). Two gold deposits along the BTZ were initially mined in the late 1980s at Jennys Reward, and Goongarrie Lady which was recently re-commissioned by a private group.
Geology	Deposit type, geological setting, and style of mineralisation.	The Goongarrie Project consists of 70km² of greenstone sequence within the Kalgoorlie Terrain. The Project covers twelve kilometers of the Bardoc Tectonic Zone (BTZ), which is the northern extension of the Boulder-Lefroy Shear Zone (BLSZ) to the south, one of the richest gold mineralised structures in the Yilgarn Craton. Subsequent exploration activities have identified two additional subparallel N-S structures. The belt forms a tight NNW-trending, easterly-overturned, SE-plunging syncline bounded to the west by younger granites of the Goongarrie-Mount Pleasant dome and to the east by those of the Scotia dome. The western limb of the syncline is composed of Ora Banda domain mafic and ultramafic volcanics and related intrusive rocks, and the eastern limb is composed of Boorara domain mafic and ultramafic volcanics, related intrusives, and metasediments. The eastern limb is underlain in the northeast by a highly-deformed, granitised greenstone paragneiss. The core of the syncline consists of Black Flag Group clastic metasediments and felsic volcanics, with occasional slivers of mafic and ultramafic rock. The synclinal axis is dissected by the strike-parallel shears of the Bardoc Tectonic Zone and the syncline has been intruded at its northern end by the Comet Vale monzogranite.
Drill hole Information	A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:  o easting and northing of the drill hole collar o elevation or RL (Reduced Level – elevation above sea level in metres) of	Refer to Appendix 1.

Criteria	JORC Code explanation	Commentary
	the drill hole collar o dip and azimuth of the hole o down hole length and interception depth o hole length.	
Data aggregation methods	In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high grades) and cut-off grades are usually Material and should be stated.	NA
	Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.	
	The assumptions used for any reporting of metal equivalent values should be clearly stated.	
Relationship between mineralisation widths and intercept lengths	These relationships are particularly important in the reporting of Exploration Results.  If the geometry of the mineralisation with respect to the drill	The geometry of mineralisation in relation to drilling and costeans is interpreted to be close to orthogonal.

Criteria	JORC Code explanation	Commentary
	hole angle is known, its nature should be reported.	
	If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g. 'down hole length, true width not known').	
Diagrams	Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.	Refer to the body of this report.
Balanced reporting	Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.	NA
Other substantive exploration data	Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and	All meaningful substantive material has been reported by the company in its announcements on the project to date.

Criteria	JORC Code explanation	Commentary
	method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.	
Further work	The nature and scale of planned further work (e.g. tests for lateral extensions or depth extensions or large-scale step-out drilling).	Ongoing assessment and prioritisation of targets will result in further exploration drill programs at the Goongarrie Gold Project.
	Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.
