

## NORTHERN TERRITORY ASSAY RESULTS

### HIGHLIGHTS

- Ten (10) RC/DD holes drilled at Spectrum for a total of 4,388 metres.
- All assay results have now been received, with intercepts including:
  - 6.42m at 1.45% TREO<sup>1</sup> from 399m (FMD015)
  - 2.74m at 0.34 ppm Au from 400m (FMD015)
  - 2.0m at 0.71 ppm Au from 415m (FMD015)
  - 1.64m at 0.44 ppm Au from 206m (FMD016)
  - 1m at 0.18% Cu from 333m (FMD007)
  - 2m at 0.9% TREO from 333m (FMD007)
- Results from the 2023 and 2025 drilling program have demonstrated that the Fenton Shear Zone has gold and rare earth element potential. But, given these most recent results, the Company will now focus all of its exploration activities on its Siguiiri Basin Projects, located in Guinea, West Africa.
- The Company will consider joint venture and other divesture options to realise value for its Northern Territory Projects.

### Commenting on the results, Managing Director Chris Swallow said:

*“The Spectrum Project is part of the regionally significant Fenton Shear Zone and has seen very little modern-day exploration with the Company testing priority geophysical and structural targets along the Eastern and Westerns flanks of the Fenton system.*

*Drilling intercepted some significant widths of sulphide zones however assay results only returned limited levels of anomalism in Au, Cu, Zn and TREO.*

*The assays have not provided enough encouragement for the Company to continue exploring the Fenton Shear Zone with the Company looking for divestment or joint venture opportunities for its Northern Territory portfolio.”*

<sup>1</sup>TREO (Total Rare Earth Oxide) = La<sub>2</sub>O<sub>3</sub> + CeO<sub>2</sub> + Pr<sub>6</sub>O<sub>11</sub> + Nd<sub>2</sub>O<sub>3</sub> + Sm<sub>2</sub>O<sub>3</sub> + Eu<sub>2</sub>O<sub>3</sub> + Gd<sub>2</sub>O<sub>3</sub> + Tb<sub>4</sub>O<sub>7</sub> + Dy<sub>2</sub>O<sub>3</sub> + Ho<sub>2</sub>O<sub>3</sub> + Er<sub>2</sub>O<sub>3</sub> + Tm<sub>2</sub>O<sub>3</sub> + Yb<sub>2</sub>O<sub>3</sub> + Y<sub>2</sub>O<sub>3</sub> + Lu<sub>2</sub>O<sub>3</sub>.

DeSoto Resources Limited (ASX:DES) (“DES” or the “Company”) is pleased to provide an update from drilling programs at its Spectrum Project (EL31475), located in the Northern Territory Australia (Figures 1-2).

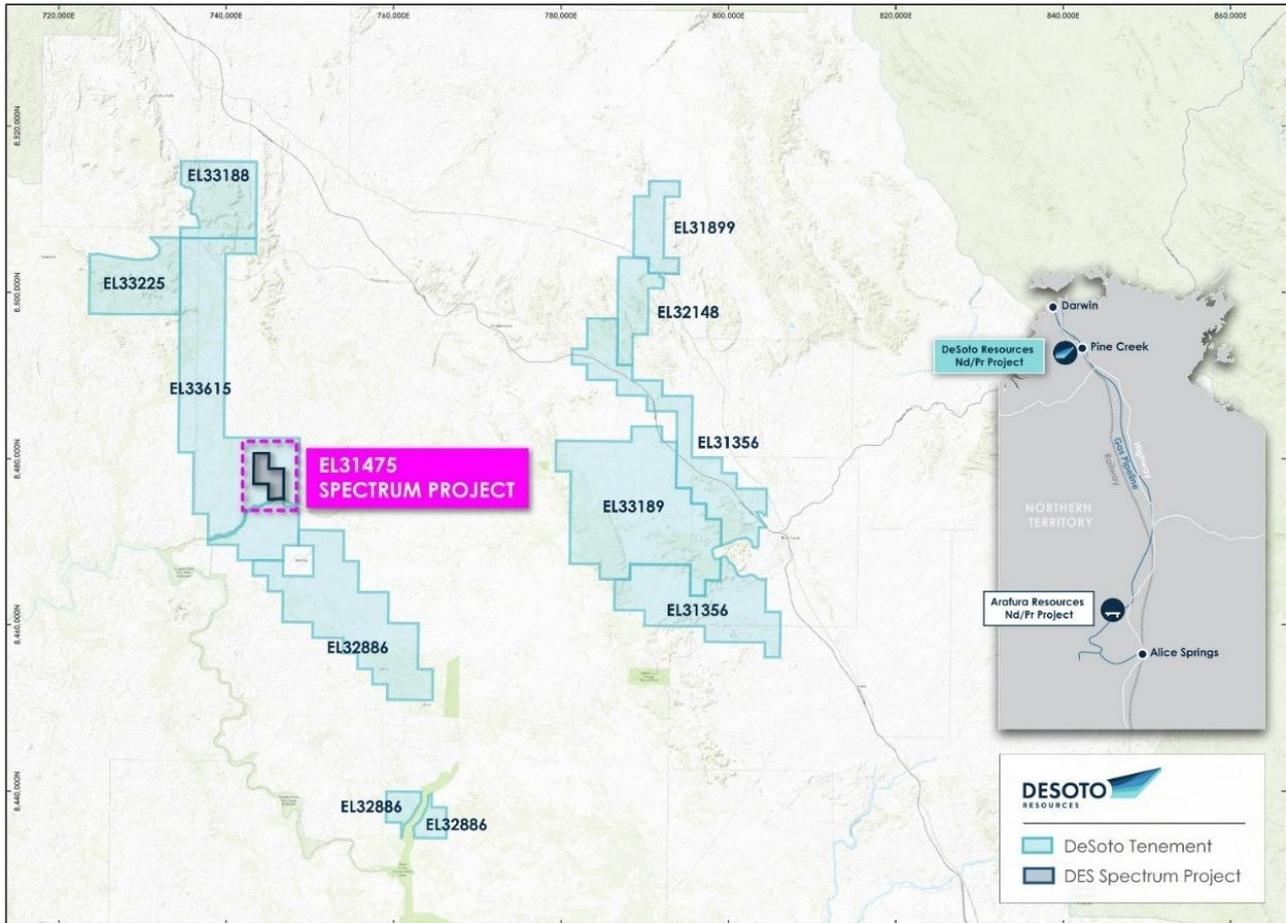

Figure 1 - Spectrum Project located within DeSoto’s 100%-owned Fenton Shear Zone Portfolio.

## TECHNICAL DISCUSSION

The Spectrum Gold Project is an under-cover, structurally complex Palaeoproterozoic hosted gold target zone that extends for over 20km along strike by 4km across strike on the western edge of the Pine Creek inlier. It is covered by 50-200m of Cambrian limestones and mudstones of the Daly Basin.

The Project is strategically located within DeSoto's existing Fenton tenement position, leveraging significant anomalies identified in previous exploration conducted by DeSoto.

Drilling at the Spectrum Project commenced in June 2025<sup>2</sup> and intensified with two (2) rigs on site to complete the program before the on-set of the wet season.

<sup>2</sup>DES ASX Announcement: Northern Territory Drilling Commences (11 May 2025)

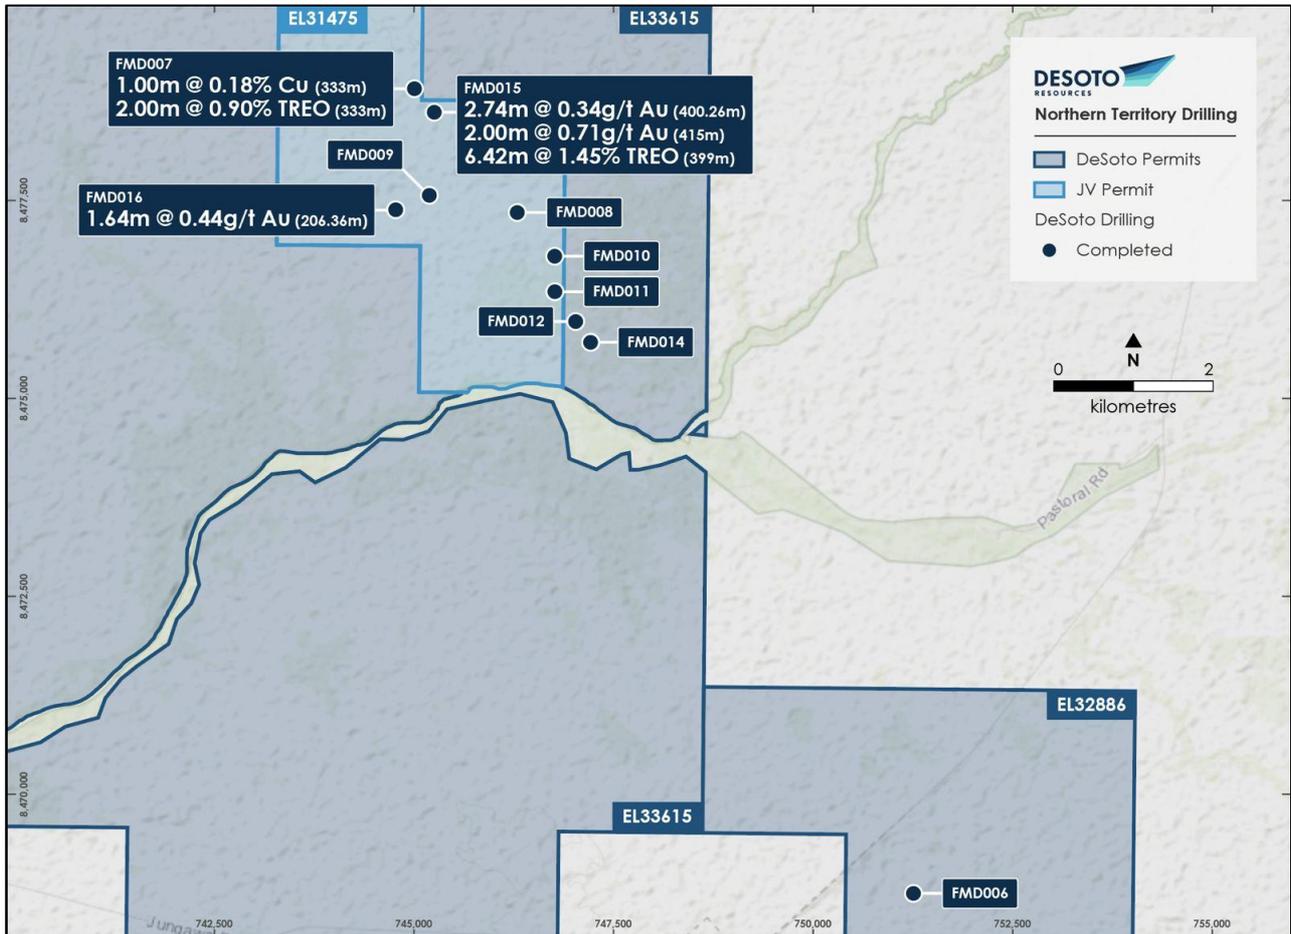

Figure 2 - Spectrum drillhole collar locations drilled in 2025.

The focus has been to test the eastern group of EM and IP geophysical anomalies over Vesper and to test the Quantum REE potential. Results of these six (6) eastern target area holes (FMD07 to FMD015) are provided in this announcement.

A detailed gravity survey carried out in 2024 by the NTGS together with infill grids by DeSoto, identified a 6mGal Bouguer gravity low anomaly along the western edge of the Spectrum Project and beneath much of the Fenton region. This is interpreted as a newly defined granite, termed the Ooloo Granite, a coherent, oblong-shaped body, 3.5 km wide by 15 km long and forms part of the Company's new Western Target Area. One (1) drill hole was completed at this target area (FMD016).

### Eastern Target Area

This has a complex structural configuration of IP and EM responses over the Vesper target area, to the southwest of the subsurface extent of the Fenton granite. Six (holes were drilled in this area (FMD008, 9, 10, 11, 12 and 14). Each intersected sulphidic zones of varying tenor and orientation. The geophysical targets were largely explained by the intersected lithologies. But no significant assay results were returned.

Further to the north, near the Quantum prospect, FMD007 and FMD015 were drilled to test for extensions of historic drill results. FMD007 intersected two intervals with elevated base metals (Zinc,

Lead) and broad low grade TREO intercepts with minor gold and uranium. Along strike to the south, FMD015 returned broad low grade TREO intercepts and minor gold values.

### Western Target Area

In the Western Target area, FMD016 was drilled to test the northern extension of the Fenton prospect where drilling by the company returned encouraging gold results<sup>3</sup>, which followed from earlier drilling by Homestake. The target is a high magnetic and strongly sheared part of the Koolpin Formation, similar to the host rocks at Cosmo Howley to the east. This zone is interpreted as part of the more broadly termed Fenton Shear Zone.

Gravity and AEM data show a significant step in the Cambrian cover thickness suggesting reactivation of the fault structure and possible geochemical leakage along the structure<sup>4,5</sup>.

FMD016 targeted the down-dropped western side of the reactivated basement fault, along the crest of a 3km long aeromagnetic anomaly and above the buried the Ooloo Granite.

- At Fenton, DeSoto's results included FMD0003 – 17m @ 0.62g/t Au from 578m, including 5m @ 1.09g/t Au, extending known mineralisation 350m to the south, and FMD0004 – 72m @ 0.43g/t Au from 528m, including 5m @ 1.02g/t Au<sup>4,6</sup>.
- Homestake's Fenton drilling included FEND14 (7m @ 0.71g/t Au from 610m, with a higher-grade zone of 8m @ 1.27g/t Au from 623m), and FEND18 (55m @ 0.89g/t Au from 418m, including 20m @ 1.74g/t Au from 423m)<sup>4,7</sup>.

FMD016 returned technically encouraging results over two (2) intervals, 20m and 15m thick, of disseminated to semi-massive pyrite with silica and chlorite infill. indicative of a strong hydrothermal system.

The pyrite dominant phase overprints a pyrrhotite-rich sheared metasediment. Historic drilling by Homestake (1997) located approximately 400 m to the south of FMD016 returned encouraging results from a skarn (FEND10, 4m 0.31g/t and 12.8% Zn from 487m), with extensive tourmaline and fluorite<sup>7</sup>. FMD016 assays returned broad intervals of elevated TREO, together with trace silver and uranium. This encouraging result opens up the along strike potential of the virtually untested Western Target Zone.

## COMPETENT PERSONS STATEMENT

The information in this report that relates to exploration results is based on and fairly represents information and supporting documentation prepared by Ms Rebecca Morgan. Ms Morgan, a consultant to the company, is a member of the Australian Institute of Geoscientists and has sufficient experience of relevance to the styles of mineralisation and types of deposits under consideration, and to the activities undertaken to qualify as Competent Persons as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Ms Morgan consents to the inclusion in this report of the matters based on this information in the form and context in which they appear.

This announcement also refers to exploration results reported by the Company on 29 January 2024, 1 August 2024, 21 August 2024, 12 March 2025, 11 May 2025, and 24 September 2025. The Company is not aware of any new information or data that materially affects the information included in these announcements.

## JORC TABLE 1

Section 1: Sampling Techniques and Data		
Criteria	JORC Code Explanation	Commentary
<b>Sampling Technique</b>	<p>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as downhole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. Aspects of the determination of mineralisation that are Material to the Public Report.</p> <p>In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</p>	<p>The drilling program consisted of reverse circulation (RC) pre-collared diamond drill (DD) holes is.</p> <p>DD –all core was metre marked and oriented where applicable prior to logging and sampling activities. Core was cut in half with an automatic core saw. Drillhole sample intervals were assigned based upon lithological contacts, with a minimum sample length of 50cm and a maximum of 120cm sampled and submitted to a commercial assay lab for analysis.</p> <p>RC pre-collar samples were collected directly from the rig cyclone in green PVC bags. No riffle splitting of samples occurred in the Cambrian cover sequence. Composite 4m samples were collected by spear sampling but have not been submitted for analysis.</p> <p>All sampling was supervised by qualified geologists and field technicians.</p>
<b>Drilling</b>	<p>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</p>	<p>The 2025 drilling program consisted of a program of reverse circulation (RC) pre-collared diamond drill (DD) holes. RC pre-collars were generally less than 156m deep. RC chip samples were drilled using a 133 mm (5 ¼) diameter hammer.</p> <p>Samples were collected at 1m intervals and then spear sampled to form 4m composite samples.</p> <p>Diamond drilling was conducted by AMWD utilising 1 track mounted rig and 1 truck- mounted rig. HQ3 core sample intervals were generally 1.0 m in length but varied from 0.2 to 1.2 m depending on sample boundaries as defined by the logging geologist.</p> <p>Core sampled as half core and duplicate samples as quarter core.</p>
<b>Drill Sample Recovery</b>	<p>Method of recording and assessing core and chip sample recoveries and results assessed.</p> <p>Measures taken to maximise sample recovery and ensure representative nature of the samples.</p> <p>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</p>	<p><u>Drill core:</u></p> <p>Sample recoveries were measured by standard industry practices for diamond drill core. Core recoveries were generally good except for the saprolite where some core loss was experienced owing to sandy and clayey core being washed out in the diamond drilling process.</p> <p>Significant sample bias is not expected with cut core.</p> <p><u>RC chips:</u></p> <p>Each 1 metre drill sample was collected and bagged off the rig, no weighing occurred. Sample recoveries were generally good except when samples became very wet and no samples were recovered. Pre-collars were stopped when excess water was encountered and /or hole deviated. No unusual measures were taken to maximise sample recovery.</p> <p>Significant sample bias is not expected with the RC chips. Some contamination may occur in wet samples.</p>

<p><b>Logging</b></p>	<p>Whether core and chip samples have been geologically and geotechnical logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</p> <p>Whether logging is qualitative or quantitative in nature. Core (or costean/Trench, channel, etc) photography.</p> <p>The total length and percentage of the relevant intersections logged.</p>	<p>All drill samples were logged systematically for lithology, weathering, alteration, veining, structure and minor minerals. Minor minerals were estimated quantitatively. A core orientation device was employed enabling orientated structural measurements to be taken.</p> <p>A KT9 magnetic susceptibility meter was utilised to collect readings for each recovered sample metre.</p>
<p><b>Sub-Sampling Technique and Sample Preparation</b></p>	<p>If core, whether cut or sawn and whether quarter, half or all core taken. If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</p> <p>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</p> <p>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</p> <p>Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling. Whether sample sizes are appropriate to the grain size of the material being sampled.</p>	<p>The diamond drill samples were collected by longitudinally splitting core using a core saw. Half of the core was sent to the laboratory for assay. The sampling method is considered adequate for a diamond drilling program of this type.</p> <p>The RC samples were collected by spear sampling from large bags collected directly from the cyclone on the drill rig. Sample condition is dry to moist; however some samples are wet. The sampling method is considered adequate for an RC drilling program of this type where the cover sequence is not expected to be significantly mineralised.</p>
<p><b>Quality of Assay Data and Laboratory Tests</b></p>	<p>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</p> <p>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</p> <p>Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</p>	<p>Samples were assayed by North Australian Laboratories (NAL) or JINNING Testing and Inspection Laboratories.</p> <p>Samples sent to NAL were analysed using technique FA40 for gold with a detection limit of 0.01ppm Au. All Au assays above 1ppm are automatically re-assayed and reported. Base metals were analysed by NAL lab method G400I using a four acid digest and read by ICP-OES. Detection limits are shown in brackets. Au(0.01ppm), Ag(1ppm), As(10ppm), Cu(1ppm), Pb(5ppm), Zn(2ppm), Bi(10ppm), and Sb(5ppm).</p> <p>Samples sent to JINNING were analysed using method FA40A for gold with a detection limit of 0.01 ppm Au. All Au assays above 1ppm are automatically re-assayed and reported. Base metals were analysed by method MADM, MADI, and FUSNM.</p> <p>In method FUSNM, samples are fused in a furnace (~ 650 °C) with Sodium Peroxide in a nickel crucible. The melt is dissolved in dilute Hydrochloric acid and the solution analysed. This process provides complete dissolution of most minerals including silicates. Analyses are performed via ICP-MS.</p> <p>Method MADI is a mixed acid digest that involves the use of nitric, perchloric and hydrofluoric acids in the attack. Dissolution is then achieved using hydrochloric acid. The use of hydrofluoric acid ensures the breakdown of silicate minerals. Although the digest approaches total dissolution of the sample there can be undissolved material encountered. Analyses are performed via ICP-OES.</p> <p>Method MADM is a mixed acid digest that involves the use of nitric, perchloric and hydrofluoric acids in the attack. Dissolution is then achieved using hydrochloric acid. The use of hydrofluoric acid ensures the breakdown of silicate minerals. Although the digest approaches total dissolution of the sample there can be undissolved material encountered. Analyses are performed via ICP-MS.</p> <p>Field duplicates, standards and blank samples were each submitted for approximately every 30 samples on a rotating basis.</p> <p>Diamond core duplicates were obtained by cutting the half core sample into two quarter core samples. As samples are not homogenised some variation is expected.</p>

<p><b>Verification of Sampling and Assaying</b></p>	<p>The verification of significant intersections by either independent or alternative company personnel. The use of twinned holes The verification of significant intersections by either independent or alternative company personnel. Discuss any adjustment to assay data</p>	<p>No independent verification of significant intersections was undertaken.</p> <p>All assay results are checked by the company's consultant Geologist.</p> <p>Assay data and certificates in digital format from the laboratory are directly uploaded to the project database.</p> <p>Rare earth oxide is the industry-accepted form for reporting rare earth elements. The following calculations are used for compiling REO into their reporting and evaluation groups:</p> <p>TREO (Total Rare Earth Oxide) = La<sub>2</sub>O<sub>3</sub> + CeO<sub>2</sub> + Pr<sub>6</sub>O<sub>11</sub> + Nd<sub>2</sub>O<sub>3</sub> + Sm<sub>2</sub>O<sub>3</sub> + Eu<sub>2</sub>O<sub>3</sub> + Gd<sub>2</sub>O<sub>3</sub> + Tb<sub>4</sub>O<sub>7</sub> + Dy<sub>2</sub>O<sub>3</sub> + Ho<sub>2</sub>O<sub>3</sub> + Er<sub>2</sub>O<sub>3</sub> + Tm<sub>2</sub>O<sub>3</sub> + Yb<sub>2</sub>O<sub>3</sub> + Y<sub>2</sub>O<sub>3</sub> + Lu<sub>2</sub>O<sub>3</sub></p> <p>Conversion of elemental analysis (REE) to stoichiometric oxide (REO) was undertaken by spreadsheet using defined conversion factors.</p> <table border="1" data-bbox="916 703 1326 1211"> <thead> <tr> <th>Element</th> <th>Factor</th> <th>Oxide</th> </tr> </thead> <tbody> <tr><td>La</td><td>1.1728</td><td>La<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Ce</td><td>1.1713</td><td>Ce<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Pr</td><td>1.2082</td><td>Pr<sub>6</sub>O<sub>11</sub></td></tr> <tr><td>Nd</td><td>1.1664</td><td>Nd<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Sm</td><td>1.1596</td><td>Sm<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Eu</td><td>1.1579</td><td>Eu<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Gd</td><td>1.1526</td><td>Gd<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Tb</td><td>1.1762</td><td>Tb<sub>4</sub>O<sub>7</sub></td></tr> <tr><td>Dy</td><td>1.1477</td><td>Dy<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Ho</td><td>1.1455</td><td>Ho<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Er</td><td>1.1435</td><td>Er<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Tm</td><td>1.1421</td><td>Tm<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Yb</td><td>1.1387</td><td>Yb<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Lu</td><td>1.1371</td><td>Lu<sub>2</sub>O<sub>3</sub></td></tr> <tr><td>Y</td><td>1.2699</td><td>Y<sub>2</sub>O<sub>3</sub></td></tr> </tbody> </table> <p>SOURCE: <a href="https://www.jcu.edu.au/advanced-analytical-centre/resources/element-to-stoichiometric-oxide-conversion-factors">https://www.jcu.edu.au/advanced-analytical-centre/resources/element-to-stoichiometric-oxide-conversion-factors</a></p> <p>All assays received to date (for the 2025 drilling program) are reported in the tables within the Appendices of this announcement (or previously released announcements).</p> <p>No holes have been twinned.</p>	Element	Factor	Oxide	La	1.1728	La <sub>2</sub> O <sub>3</sub>	Ce	1.1713	Ce <sub>2</sub> O <sub>3</sub>	Pr	1.2082	Pr <sub>6</sub> O <sub>11</sub>	Nd	1.1664	Nd <sub>2</sub> O <sub>3</sub>	Sm	1.1596	Sm <sub>2</sub> O <sub>3</sub>	Eu	1.1579	Eu <sub>2</sub> O <sub>3</sub>	Gd	1.1526	Gd <sub>2</sub> O <sub>3</sub>	Tb	1.1762	Tb <sub>4</sub> O <sub>7</sub>	Dy	1.1477	Dy <sub>2</sub> O <sub>3</sub>	Ho	1.1455	Ho <sub>2</sub> O <sub>3</sub>	Er	1.1435	Er <sub>2</sub> O <sub>3</sub>	Tm	1.1421	Tm <sub>2</sub> O <sub>3</sub>	Yb	1.1387	Yb <sub>2</sub> O <sub>3</sub>	Lu	1.1371	Lu <sub>2</sub> O <sub>3</sub>	Y	1.2699	Y <sub>2</sub> O <sub>3</sub>

<p><b>Location of Data points</b></p>	<p>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</p> <p>Specification of the grid system used Quality and adequacy of topographic control</p>	<p>Drill hole collar locations were recorded at the completion of each hole by hand-held GPS ±5m.</p> <p>Positional data was recorded in projection MGA1994 Zone 52S.</p>																																																
<p><b>Data Spacing and Distribution</b></p>	<p>Data spacing for reporting of Exploration Results</p> <p>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</p> <p>Whether sample compositing has been applied</p>	<p>The diamond drill holes were designed to test the geophysical targets or REE targets.</p> <p>The drillholes have not been drilled on fence lines or regular spaced grids.</p> <p>Drillhole data spacing is not considered adequate for Mineral Resource estimation as an appropriate understanding of mineralisation continuity has not yet been established.</p> <p>No composite sampling has been applied to drill core.</p>																																																
<p><b>Orientation of Data in Relation to Geological Structure</b></p>	<p>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</p> <p>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</p>	<p>Holes were planned approximately perpendicular to defined geophysical targets</p> <p>Sampling is believed to be unbiased.</p>																																																

<b>Sample Security</b>	The measures taken to ensure sample security	Core trays and RC samples are stored on Middle Creek station while the program is in progress. Core trays are transported to Pine Creek by Desoto staff where they are cut and stored at the Bacchus Resources secure yard. Sampled cut core is bagged and put directly into sample cages that the lab collects and transports to the lab
<b>Section 2 Reporting of Exploration Results</b>		
<b>Mineral Tenement and Land Tenure Status</b>	Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.	<p>The Pine Creek Project comprises nine contiguous exploration licences (EL31356, EL32148, EL31899, 32886, EL33188-33189, EL33225 and EL33615 (amalgamation of EL32885 and EL33450) covering an area of 1,565 km<sup>2</sup>. The licences are held by Mangusta Minerals Pty Ltd, a 100% owned Desoto subsidiary. The Spectrum Project is held by CopperOz Pty Ltd and sits within exploration license EL31475 which is wholly enclosed within DeSoto exploration license EL33615.</p> <p>The Project is located approximately 150 km south of Darwin, and 8 km north of Pine Creek in the Northern Territory. Access to the Pine Creek Project is from the sealed Stuart Highway Hayes Creek via the sealed Dorat Road and Ooloo Roads and then via well maintained gravel roads.</p>
<b>Exploration Done by Other Parties</b>	Acknowledgment and appraisal of exploration by other parties.	<p>The majority of past exploration work within the Project area (including drilling, surface sampling; geophysical surveys, geological mapping) has been largely completed by Homestake Gold of Australia, North Mining, Newmont Australia, St George Mining Pty Ltd, Aztec Mining Ltd, AngloGold Australia, Davos Resources and Thundelarra Exploration</p> <p>The relevant reports are available on the Northern Territory Geological Survey GEMIS open file database library. A summary of previous work completed can be found in the company prospectus at <a href="http://www.desotoresources.com">www.desotoresources.com</a></p> <p>All work completed by the Company has been released to the market in previous ASX releases.</p>
<b>Geology</b>	Deposit type, geological setting and style of mineralisation.	<p>The Fenton Project is located in the western and central sections of the Central Domain of the Pine Creek Orogen and comprises units of the Cosmo Supergroup which include the South Alligator Group, and Finnis River Group. The stratigraphic sequences are dominated by mudstones, siltstones, greywackes, sandstones, tuffs, and limestones. These sedimentary units, as well as basic intrusions, were folded, metamorphosed, and then subsequently intruded by the Cullen Batholith. Pegmatites occur throughout the region in close proximity to the Cullen Granites. The project area is overlain by younger Cambrian basin sedimentary sequences.</p> <p>The Fenton Project is considered prospective for orogenic Pine Creek gold mineralisation and pegmatite hosted lithium (spodumene) mineralisation. The majority of known gold deposits are hosted by the South Alligator Group and the lower parts of the Finnis River Group along anticlines, strike-slip shear zones and thrusts proximal to the Cullen Granite.</p> <p>The REE mineralisation reported here is hosted within sheared dolerite and Banded Iron Formation units with quartz-pyrite-pyrrhotite veining. The origin of the REE mineralisation is not yet understood but is assumed to be related to the intrusion of granites near the Fenton Shear Zone.</p>
<b>Drill Hole Information</b>	<p>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</p> <ul style="list-style-type: none"> <li>• easting and northing of the drill hole collar</li> <li>• elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</li> <li>• dip and azimuth of the hole</li> <li>• down hole length and interception depth</li> <li>• hole length</li> <li>• If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</li> </ul>	Information is presented in tables and plans in the body and appendices of this release or previous ASX announcements.
<b>Data Aggregation Methods</b>	In reporting Exploration Results, weighting averaging techniques, maximum and/or	Downhole length weighted averaging is used to aggregate assay data from multiple samples within a reported intercept.

	<p>minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</p> <p>Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</p> <p>The assumptions used for any reporting of metal equivalent values should be clearly stated.</p>	<p>No grade truncations or cut-off grades were applied.</p> <p>No metal equivalent values are used.</p>
<b>Relationship Between Mineralisation Widths and Intercept Lengths</b>	<p>These relationships are particularly important in the reporting of Exploration Results</p> <p>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the downhole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</p>	<p>The overall orientation of mineralised zones is not yet known or properly understood.</p>
<b>Diagrams</b>	<p>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</p>	<p>See the body of this announcement for relevant figures.</p>
<b>Balanced Reporting</b>	<p>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced avoiding misleading reporting of Exploration Results.</p>	<p>The company believes this announcement is a balanced report, and that all material information has been reported.</p>
<b>Other Substantive Exploration Data</b>	<p>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</p>	<p>Exploration drilling for gold by previous explorers has been conducted by Homestake Gold of Australia (FEND14 and FEND 18 holes in particular), Newmont Australia (KAD0001-3) in the current area. The Company is also aware of regional scale aeromagnetic and AEM surveys, and geological mapping programmes undertaken by past explorers and has access to versions of the data that is available in reports.</p> <p>All relevant exploration undertaken by the Company has been reported in previous announcements.</p>
<b>Further Work</b>	<p>The nature and scale of planned further work (eg tests for lateral extensions or large scale step out drilling).</p> <p>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</p>	<p>No further work is planned at this stage.</p>
