CULAR
EVENTS**

Cigarette smoking increases the risk of serious cardiovascular events from combined oral contraceptive (COC) use. This risk increases with age, particularly in females over 35 years of age, and with the number of cigarettes smoked. For this reason, COCs, including NEXTSTELLIS, are contraindicated in females who are over 35 years of age and smoke. [See Contraindications (4) and Warnings and

discount. Maximum savings limits apply; patient out-of-pocket expense will vary. Offer not valid for patients enrolled in Medicare, Medicaid, or other federal or state healthcare programs. Please see Program Terms, Conditions, and Eligibility Criteria [here](#).
