

## Dec 2025 Quarterly Activities Report

Albion Resources Limited (ASX: ALB) (“Albion” or “the Company”) is pleased to provide the following summary of activities for the quarter ended **31 December 2025**.

During the quarter, Albion focused on consolidating the technical progress achieved at the Yandal West Gold Project (located in WA) through target refinement, geophysical interpretation and heritage processes. These activities were undertaken to responsibly position the Company for the next phase of exploration, while maintaining capital discipline and strategic flexibility.

### Quarterly Key Highlights:

#### Exploration – Yandal West Gold Project (WA)

- Advanced priority targets at Yandal West through geological interpretation, geophysical analysis and geochemical programs, building on results reported in earlier periods.
- Completed Gradient Array Induced Polarisation (GAIP) surveys across priority areas at May Queen and Ives North, identifying coherent anomalies associated with key structural corridors.
- Defined a previously unrecognised, undrilled multi-kilometre gold corridor at Ives North, supported by coincident geological, geochemical and geophysical datasets.
- Completed a heritage study covering priority target areas in late 2025; outcomes are currently pending.

#### Corporate and Capital Structure

- Cash on hand of **A\$3 million** at quarter end, with a tight capital structure of **142 million shares on issue**, providing flexibility to progress exploration and assess strategic opportunities.

#### Message from the CEO - Peter Goh

*“This quarter was about doing the groundwork. We used the period to refine our targets, complete key geophysical programs and progress heritage processes so that the next phase of exploration focuses on our highest priority targets.*

*The heritage study completed late in the year is an important step, and we are now awaiting the outcomes. Once received, we will update the market on the implications for access and the timing of future drilling.*

*In parallel, we continue to review strategic opportunities that align with our value creation objectives, while maintaining a clear focus on high-impact exploration. Albion remains well-funded and flexible as we position the Company for the next stage of growth.”*

#### Outlook for March Quarter:

- High-quality targets continue to emerge at Yandal West, with Ives North representing a compelling, undrilled priority supported by multiple datasets.
- Heritage outcomes are pending; the Company will update the market once results are received and assessed.
- Subject to heritage and access approvals, drilling remains targeted for early 2026 (prior guidance late Jan 2026).
- Applications for additional tenure adjacent to the Yandal West Project have been submitted, with outcomes subject to the relevant ballot and regulatory processes.
- Strategic opportunities continue to be assessed in parallel with exploration activities.

**Yandal West Project (WA):**

On 29 January 2025, the Company completed the acquisition of Yandal West Project after receiving the requisite shareholder approvals at the 22 January 2025 shareholder meeting.

The project lies within the Northeastern Goldfields Province of the Yilgarn Craton, in the northern section of the Yandal Greenstone Belt (Figure 1). The Yandal Greenstone Belt is an elongate, fault-bounded, north-northwest-trending belt of Archean mafic rocks and intercalated banded iron formations and felsic volcanoclastic rocks (Figure 2). The belt contains the multi-million-ounce Jundee and Bronzewing gold deposits owned and operated by Northern Star Resources (ASX: NST), as well as Wiluna Gold Mine to the North West (Figure 1). For more information on the project background see ASX ALB announcement 28 November 2024.

<sup>1</sup> The Millrose deposit was purchased from Strickland Metals Ltd by Northern Star Limited for \$61m, see the ASX Announcement 26 June 2023.

<sup>2</sup> The processing capacity for Jundee and Bronzewing Processing Plants (care and maintenance) were obtained from the Northern Star website, see the company website [Bronzewing Operations | Northern Star](#) and website [Jundee Operations | Northern Star](#) (Accessed 29 April 2025).

<sup>3</sup> The process capacity for Wiluna (owned by Wiluna Mining) includes a 2.1 mtpa CIL processing facility, a modern 750 ktpa gold concentrator, a gas-fired power station and a 300-person camp, see the company website [Projects Overview: Wiluna Mining Corporation](#) (Accessed 29 April 2025).

*Recent Activities During and Subsequent to the Quarter End*

Albion advanced its understanding of the Yandal West Gold Project through geological interpretation, geophysical analysis and geochemical programs, building on results reported in earlier periods. Activities during the period were focused on defining scale, structure and priority ahead of future drilling.

- **Gradient Array IP (GAIP) surveys completed:**

Gradient Array Induced Polarisation surveys were completed across priority areas at May Queen and Ives North. The surveys outlined coherent chargeability and resistivity anomalies interpreted to reflect sulphide-bearing systems along key structural corridors and granite–greenstone contacts.

- **Bronzewing-style corridor defined at May Queen:**

Integration of gravity, IP and geochemical datasets defined a ~5 km gold-bearing corridor at May Queen, interpreted as a Bronzewing-style structural corridor. The corridor is coincident with pathfinder geochemical anomalies.

- Undrilled multi-kilometre gold corridor identified at Ives North:**  
 Albion identified a previously unrecognised multi-kilometre structural–hydrothermal gold corridor along the northern margin of the Ives Granite. Rock-chip sampling returned high-grade gold results (up to 42.1 g/t Au), supported by a coherent gold-in-soil anomaly and elevated intrusion-related pathfinder elements. Ives North has not been drilled.
- Heritage studies progressed:**  
 A heritage study covering priority target areas, including Ives North and parts of May Queen, was completed in late 2025. The Company is currently awaiting the outcomes of this work, which will inform access and the timing of future drilling activities.
- Corporate and investor activities:**  
 During the quarter, Albion completed its Annual General Meeting, issued equity incentive securities following shareholder approval, and undertook investor engagement activities, including an investor webinar outlining the Company’s exploration strategy and priorities.
- No drilling undertaken:**  
 No drilling was undertaken during the quarter, as the Company prioritised heritage processes, geophysical surveys and target refinement to ensure future drilling programs are appropriately sequenced and technically robust.

**Leinster Project – E36/1005, E36/1099**

The Leinster Project, located 30 km southeast of Leinster, covers an area of **60 km<sup>2</sup>** and is **prospective for nickel-copper**, being located adjacent to BHP’s Nickel West Weebo Ni deposit.

*Recent Activities*

No field activities were undertaken during the quarter.

**Management and Board:**

No material changes were made during the quarter.

**Corporate:**

**Cash on hand at the end of the quarter was \$3.0M**, the Company is fully funded to progress exploration activities at Yandal West and to assess strategic opportunities.

**Related Party Payments**

Pursuant to item 6 in the Company’s Appendix 5B – Quarterly Cash Flow Report for the Quarter ended 31 Dec 2025, the Company made payments of \$41k to related parties which relate to existing remuneration arrangements (director fees and superannuation).

**Exploration**

ASX Listing Rule 5.3.1: Exploration and Evaluation Expenditure during the Quarter was \$552k. Full details of activity during the Quarter are set out above.

ASX Listing Rule 5.3.2: There were no mining production and development activities during the Quarter.

In line with obligations under ASX Listing Rule 5.3.3, Albion provides the following information with respect to its Mining Tenement holdings as at **31 December 2025**.

**Competent Persons Statement**

*The information in this announcement that relates to Exploration Results, including geological observations, geochemical assays, and geophysical datasets, is based on and fairly represents information and supporting documentation prepared by Mr Leo Horn. Mr Horn is a member of the Australian Institute of Geoscientists. Mr Horn has sufficient experience relevant to the styles of mineralisation and types of deposits which are covered in this announcement and to the activity which they are undertaking to qualify as a Competent Person as defined in the 2012 edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves' ("JORC Code"). Mr Horn consents to the inclusion in this announcement of the matters based on his information in the form and context in which it appears.*

**Forward Looking Statement**

*This announcement may contain forward-looking statements. Such statements are subject to risks and uncertainties that could cause actual results to differ materially. The Company cautions that the potential economic significance of the exploration results has not yet been established, and further work is required before any conclusions regarding resources or development can be drawn.*
