

Comet Vale Gold Project, WA

# Key drill permits granted to drive growth, new high-priority targets identified from soil sampling and adjacent tenure secured

## Key POW's granted – unlocking further growth at Comet Vale - current MRE of 860koz @ 3.7 g/t Au

- Drilling of high-priority and previously untested growth targets has commenced following the grant of key POW drilling permits by DEMIRS.
- Drilling on these exciting new target areas was delayed pending processing of these permits.
- Many of these targets are **undrilled historical mines** with **high-grade gold rock chip** samples, exhibiting the **same** geological and geochemical **signatures** as the Company's 2025 **Lakeview, Sovereign North and Cheer** discoveries.

## Soil sampling defines more high-priority 'Lakeview'-style targets

- In 2025, **Gorilla Gold** added **750koz** in new resources at **Comet Vale** by drilling new targets. **[Click this link to view the 3D Comet Vale Project in Canetoad.ai Software Platform.](#)**
- Ongoing soil sampling has defined more of these targets, six of which are scheduled to be drilled now that the POW's have been received.

## Highly prospective new tenure secured along strike to the north of Comet Vale

- Unexplored tenure north of and adjacent to Comet Vale has been secured.
- Although hosting mostly granite lithologies, various structural features that are coincident with mineralisation extend into the new tenure.
- **Three drill rigs are currently operating at Comet Vale undertaking in-fill and new growth drilling following the grant of the new POW's, with results expected in the coming weeks**
- **Two drill rigs are operating at Mulwarrie undertaking resource extension drilling with results expected in the coming weeks**

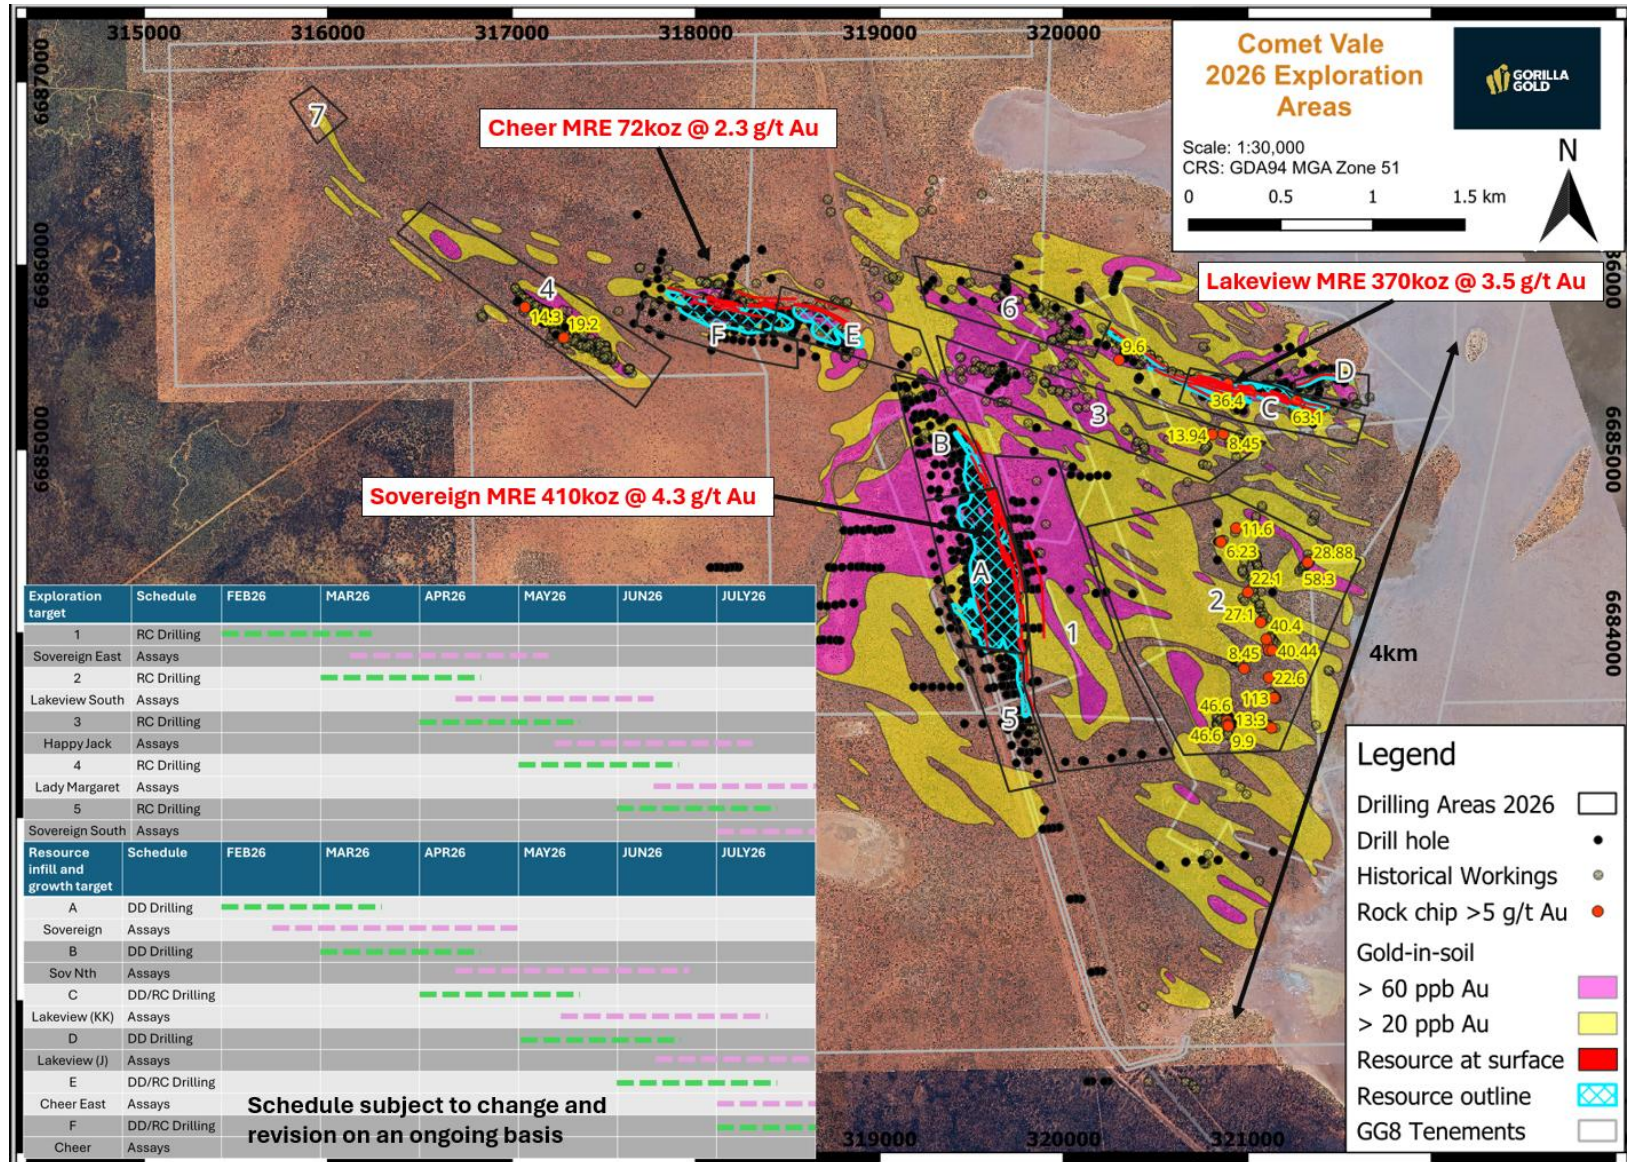

Figure 1. Exploration target areas for 2026 at Comet Vale

Gorilla Gold Mines Ltd ('Gorilla', 'GG8' or 'the Company'), is pleased to announce it has secured new key drill permits at the 100%-owned Comet Vale Gold Project, allowing it to expand its current drilling program to test a number of highly prospective new target areas with the potential to drive the next phase of resource growth at the project.

***Gorilla Chief Executive Officer, Charles Hughes, commented:***

*"We are very excited to have secured the grant of these POW's, clearing the way for us to drill some of the best targets we have yet identified at Comet Vale.*

*"It was principally by testing new areas of the Comet Vale Project that Gorilla Gold was able to deliver a step-change in the project's resource base last year, with discoveries such as Lakeview helping to deliver the 0.75 million ounces of high-grade resources we defined in 2025.*

*"We see similar upside in front of us now, with our exploration team having identified a large number of compelling targets that tick every box from a discovery perspective.*

*"We have been anxiously awaiting drilling permits for these areas, with the grant of these POW's representing a pivotal catalyst for the Company.*

*"We are now cleared to drill prospects that have very similar geological and geochemical characteristics to the Lakeview discovery – but have yet to see a drill hole!*

*"Meanwhile, ongoing soil sampling has delivered and tightened up targeting at Comet Vale and really reaffirmed the significant upside at the project.*

*"The tenure to the north of the project area also has some interesting structures that transect it and represent extensions of the known mineralised structures. Securing this additional ground to the north will unlock the exploration potential up there."*

## Growth and Exploration activities at Comet Vale

The Comet Vale Project has a Mineral Resource Estimate ('MRE') of 860koz @ 3.7 g/t Au, sits on granted mining leases, close to mills and road infrastructure 100km north of Kalgoorlie. The project has seen historical gold production of >200koz @ >20g/t Au, with underground operations occurring as recently as 2020.

Gorilla Gold made multiple new gold discoveries at the Lakeview, Sovereign North and Cheer prospects at the project in 2025 which led to a 900% increase in the MRE. Ongoing exploration work has identified multiple high priority growth targets with very similar characteristics to the Lakeview, Sovereign North and Cheer discoveries. POW's are now granted for these high priority areas and Gorilla has a strategy to significantly grow resource bases again this year.

Figure 2. Location of Comet Vale and Mulwarrie Projects

The project lies within granted Mining Leases, adjacent to the Goldfields Highway, in a region with multiple operational gold mills within a 100km radius. The Company has identified a 10km by 3km zone of interrelated structural deformation and mineralisation within which the Sovereign shear-zone, King Kong shear-zone, and the Silver Back shear-zones are situated.

## Key POW's granted unlocking further growth at Comet Vale

Programs of work drilling permits have been received from DEMIRS for key targets (Targets 1-7 in Figure 1). Exploration drilling has commenced at Target 1 (Sovereign East) with a schedule in place to test the top 5 key targets (detailed below) in the first half of this year.

Exploration target	Schedule	FEB26	MAR26	APR26	MAY26	JUN26	JUL26
1	RC Drilling	█	█				
Sovereign East	Assays		█	█	█		
2	RC Drilling		█	█	█		
Lakeview South	Assays			█	█	█	
3	RC Drilling			█	█	█

**Figure 3.** Exploration and growth drilling schedule for Comet Vale (subject to change)

## Soil sampling defines more high priority 'Lakeview' style targets

Gorilla targeted the Lakeview, Sovereign North and Cheer discoveries in 2025 based upon three simple exploration criteria, this simple strategy culminated in an MRE increase of 750koz in 2025.

1. Strong surface geochemical anomalism, including rock chips, historical workings and soil sampling
2. Clearly identifiable structure
3. Poorly tested historically

Gorilla has prioritised targets based upon meeting the above criteria, the top five targets are detailed below.

### Target 1 – Sovereign East

Strong geochemical anomaly coinciding with the position of footwall lodes when projected to surface. Little drilling has occurred at this target area, most of which was for Ni laterite exploration. Strike of the system is roughly the same as the Sovereign system which has a resource of 410koz and has produced ~200koz historically.

### Target 2 – Lakeview South

This target area has multiple high grade rock chips at surface as high as 111g/t Au, coincident soil geochemistry, significant historical shafts and workings over a large area, and sits on multiple NNE and WNW cross structures similar to both Sovereign and Lakeview. Very little drilling has been undertaken in this prospect area.

### Target 5 – Sovereign South

This target area has shallow drilling and a very shallow resource estimate in place, is simply a continuation of the Sovereign structure to the south that hasn't been well tested. This is an obvious area for direct resource extension.

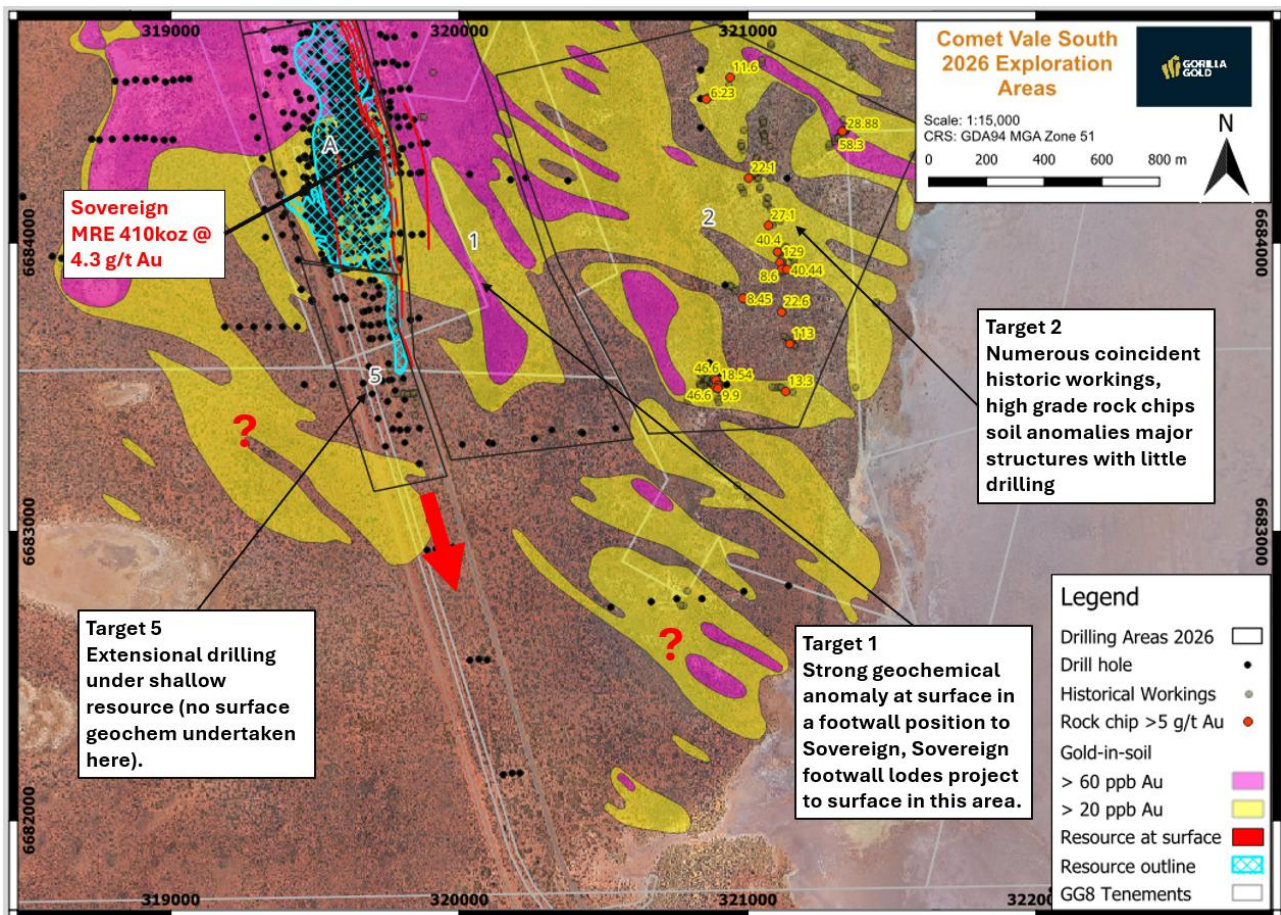

Figure 4. Zoomed image for targets 1,2 & 5

### Target 3 – Happy Jack

The Happy Jack target has a major geochemical anomaly and is the most significant historical producer after the Sovereign trend. The Happy Jack trend is on a parallel structure to the Lakeview Resource and has similar NE and NW cross cutting structures. Drill hole HJEX005 intersected 21m @ 11.6 g/t Au from 24m in August 2025 and has not yet been followed up. Happy Jack was acquired by Gorilla in 2025 from a private holder.

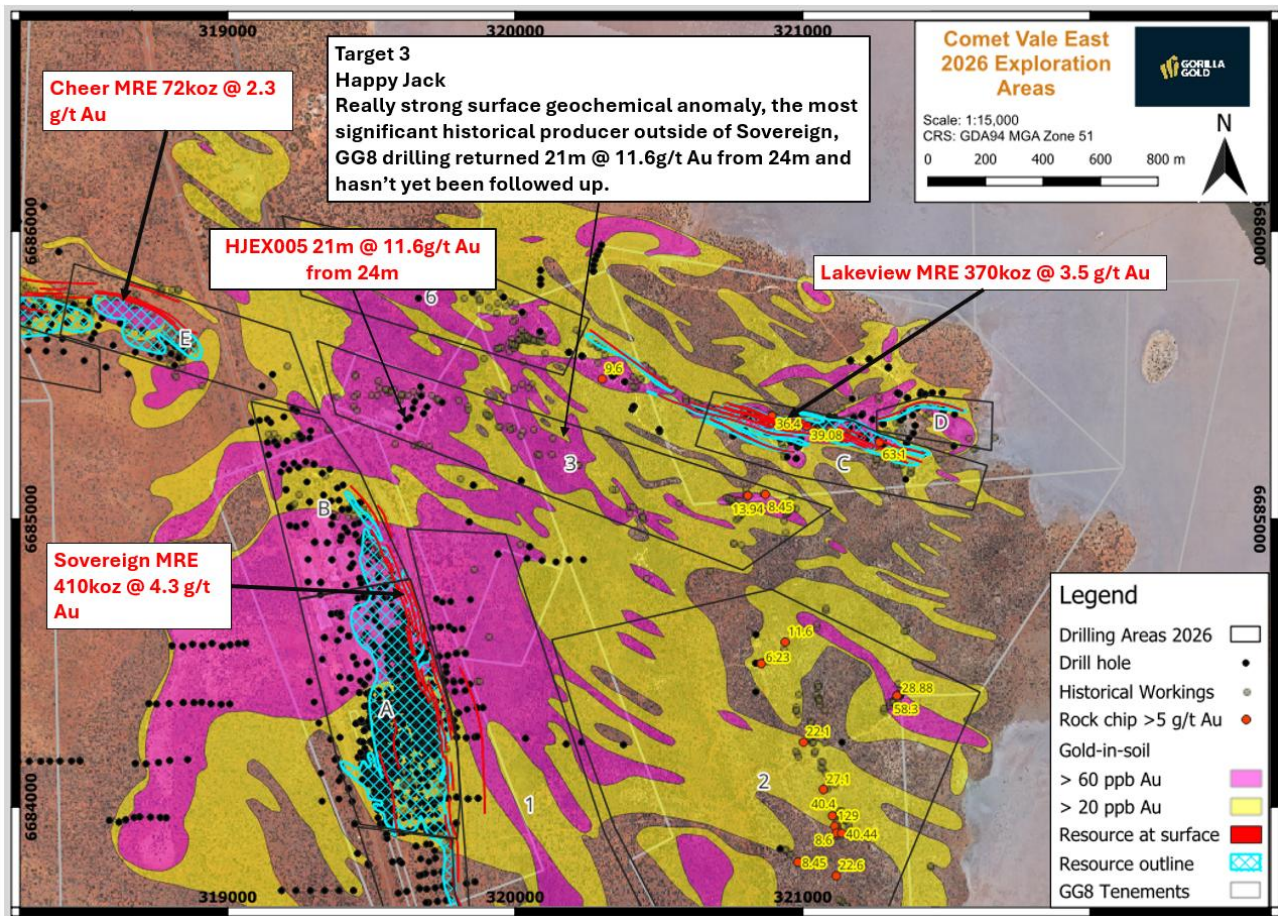

Figure 5. Zoomed image for target 3

### Target 4 – Lady Margaret

The Lady Margaret target has a major geochemical anomaly and is the original historical discovery at the Comet Vale Project, with most reported gold ounces being extracted at a grade of ~20 g/t Au. Lady Margaret is on a NW structure that is dissected by NNE and NNW structures, similar to Cheer and Lakeview. Very little drilling has been undertaken at Lady Margaret.

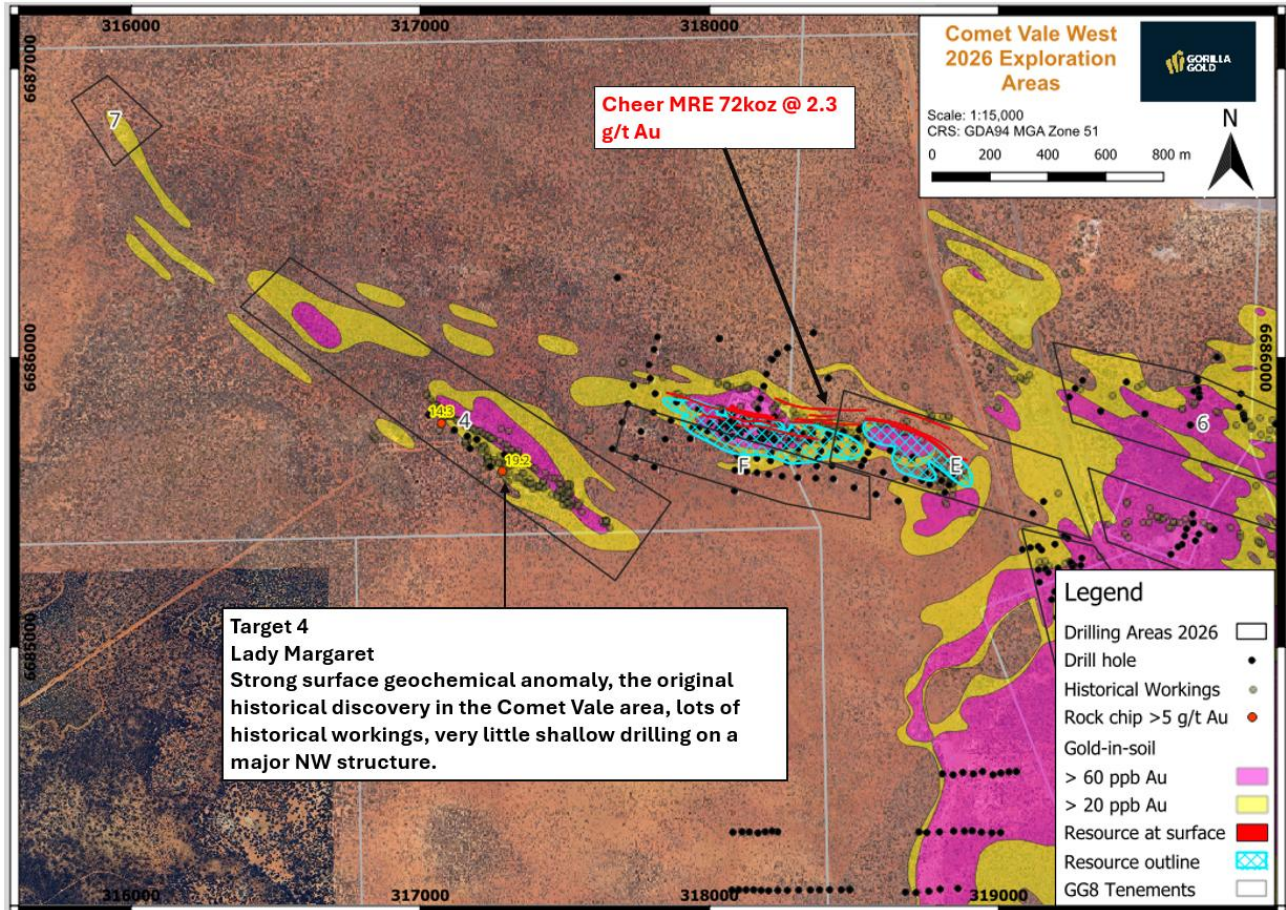

Figure 6. Zoomed image for target 4

## New Tenure secured along strike to the north of Comet Vale

New tenure to the North of the Comet Vale Project has been applied for significantly expanding the footprint of the project. The tenure is unexplored but does contain interpreted extensions of mineralised structures already drilled by GG8. Gorilla plans to undertake geochemical sampling and drilling of any targets once the tenure is fully granted.

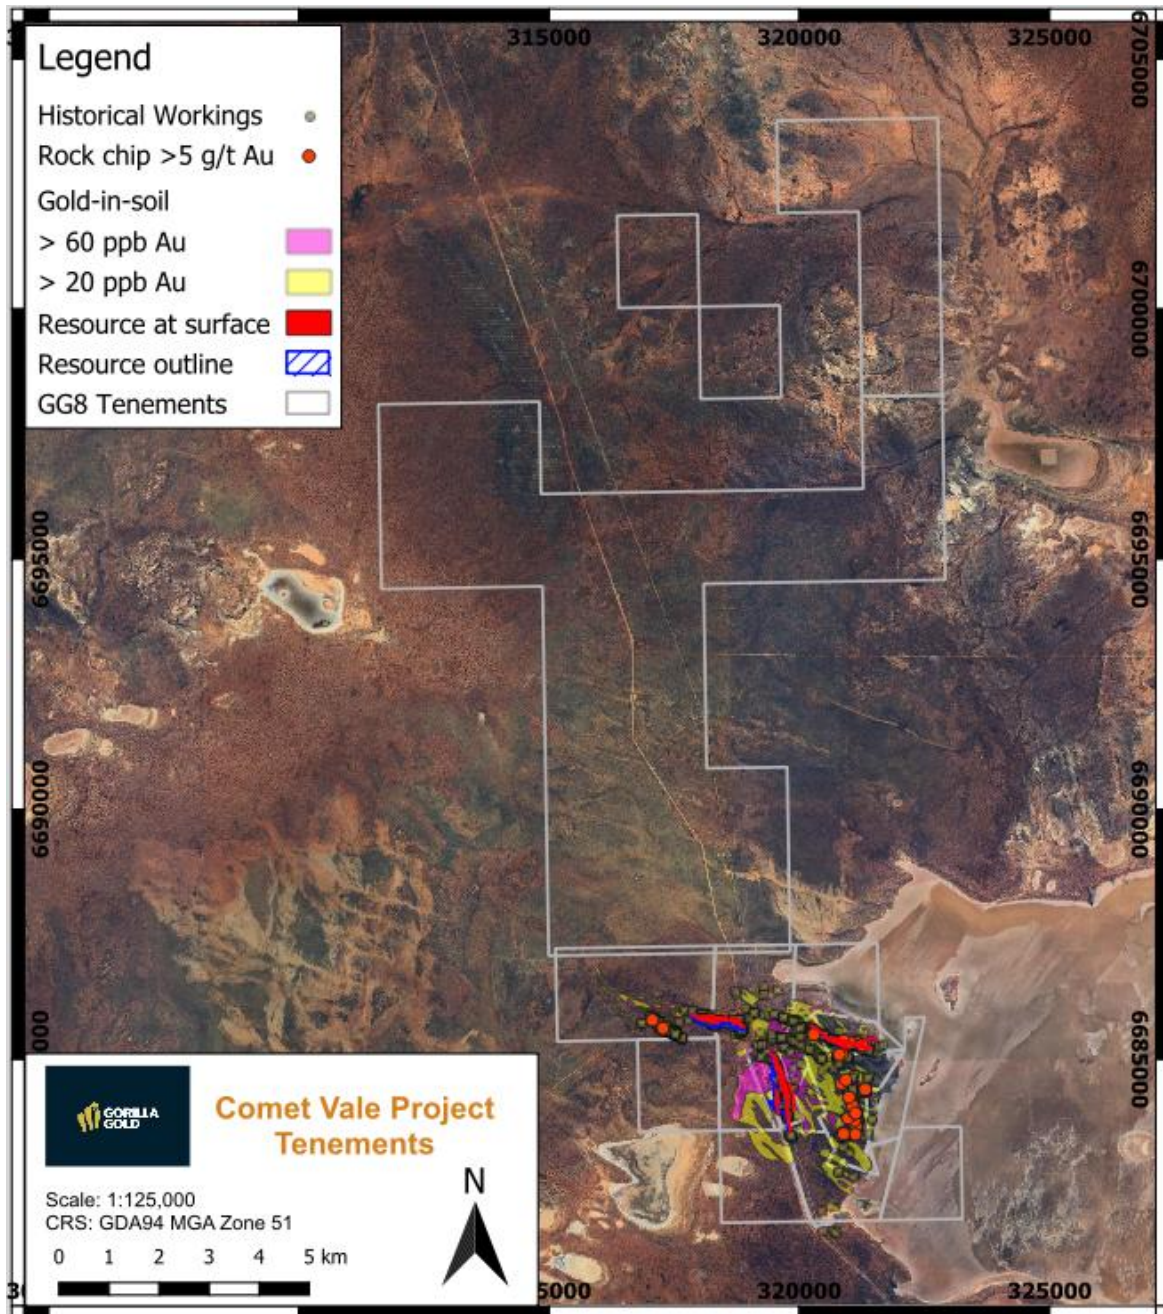

Figure 7. Plan showing Comet Vale Project tenements

## Next Steps at Comet Vale

As well as the new exploration drilling which is described in detail in this release, GG8 are undertaking Resource infill and extension drilling utilising two diamond drill rigs, engineering, metallurgical and geotechnical studies and permitting.

This announcement has been authorised and approved for release by the Board.

### Competent Person's Statement:

The information in this announcement relates to exploration results for the Comet Vale Project which Mr. Charles Hughes has reviewed and approves. Mr. Hughes, who is an employee of Gorilla Gold Mines Ltd, a professional geoscientist and a Member of the Australian Institute of Geoscientists. Mr. Hughes has sufficient experience relevant to the style of mineralisation and type of deposits under consideration, and to the activities which have been undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration results, Mineral Resources and Ore Reserves. Mr. Hughes consents to the inclusion in this announcement of the matters based on this information in the form and context in which it appears.

Specific exploration results referred to in this announcement were originally reported in the following Company announcements in accordance with ASX Listing Rule 5.7:

Title	Date
Major Resource Upgrade for Comet Vale	15 December 2025
Comet Vale Drill Results and MRE Timing Update	11 November 2025
High Priority Surface Geochem Targets - Comet Vale/Mulwarrie	17 October 2025
Key Leadership Appointments Drive Growth & Comet Vale Update	9 October 2025
Camp Scale Gold System Emerges at Comet Vale	8 September 2025
High-Grade Discovery at Happy Jack	21 August 2025
Bonanza Grades from Sovereign	19 August 2025
Comet Vale Drilling Update	14 August 2025
Results from Initial Metallurgy Testwork at Lakeview	5 August 2025
Lakeview Drilling Update	7 July 2025

Update for Comet Vale and Mulwarrie	2 July 2025
Lakeview Update	6 June 2025
Parallel Structure Discovered at Lakeview	19 May 2025
Lakeview Update	8 May 2025
Lakeview Extended 125m Along Strike	17 April 2025
Further Intercepts from Lakeview Prospect	21 March 2025
Further High-Grade Hits from Lakeview & Sovereign Prospects	17 March 2025
Lakeview High-Grade Intercepts Grow Mineralisation	28 February 2025
Gold Intercepts from New Prospects at Comet Vale and Vivien	24 February 2025
Maiden Gold Drilling Results at Cheer	6 November 2024
LRL Set to Acquire Vivien Project and 100% of Comet Vale	17 July 2024
Comet Vale Mineral Resource Estimate	11 April 2023

The Company confirms that it is not aware of any information or data that materially affects the information included in the said original announcements and the form and context in which the Competent Persons' findings are presented have not materially modified from the original market announcements.

#### Current Mineral Resource Statement for the Comet Vale Project:

Comet Vale Mineral Resource estimate							
	Resource category	Cut-off grade (Au g/t)	Au				
			Tonnes (kt)	Grade (Au g/t)	Au (koz)		
All	OP	0.5	Indicated	1,300	4.3	180	
			Inferred	2,400	2.3	180	
			<b>Sub Total</b>	<b>3,700</b>	<b>3.0</b>	<b>350</b>	
	UG	1.1	Measured				
			Indicated	400	3.7	47	
			Inferred	3,200	4.5	460	
		<b>Sub Total</b>	<b>3,600</b>	<b>4.4</b>	<b>510</b>

				Indicated	1,700	4.1	220
				Inferred	5,600	3.5	640
				<b>Total Resource</b>	<b>7,300</b>	<b>3.7</b>	<b>860</b>

The Company confirms that it is not aware of any new information or data that materially affects the information as previously released on 15 December 2025 and all material assumptions and technical parameters underpinning the estimate continue to apply and have not materially changed.

## APPENDIX 1 NEW COLLAR INFORMATION THIS RELEASE

N/A

## APPENDIX 2 JORC TABLES

### Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Comments
<b>Sampling techniques</b>	<ul style="list-style-type: none"> <li>Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</li> <li>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li> <li>Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay').</li> <li>In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information.</li> </ul>	<ul style="list-style-type: none"> <li>RC drilling - samples collected as 4m composites and in areas where interesting lithology, alteration, mineralisation or veining was encountered, 1m splits were taken. Composite samples are collected from samples piles, 1m splits are taken for every metre from the cyclone with duplicate samples taken at the instruction of the field geologist from the second chut on the cone. DD drilling has samples collected as half core in intervals between 0.3-1m based on lithology.</li> <li>Samples collected by GG8 field crew and submitted to ALS Laboratory in Kalgoorlie, WA. All samples are considered to be representative for the manner in which they are used.</li> <li>The samples were analysed using the photon assay method which uses a 0.5kg sample and requires minimal handling. The samples are riffle split at the lab and crushed to 80% passing 2mm to ensure homogeneity as uniform sample distribution is important to a quality analysis.</li> </ul> <p>SOILS</p> <ul style="list-style-type: none"> <li>Soil samples were collected by Gorilla Gold and contractors (OZEX Exploration Services and Omni GeoX) personnel on a 400x200m across Mulwarrie (Mulline) and 200x40m, 200x20m and 100x20m grid across Comet Vale.</li> <li>Samples were collected by digging a 30x30x10cm pit, homogenising and then sieving and collection of a dry 250g -2mm sample.</li> <li>Samples were submitted to LabWest (Perth) for Ultra Fine Fraction (UFF) separation (&lt;2µm) and analysis by Aqua Regia ICP-MS and ICP-OES for determination of Au and 51 elements.</li> </ul>
<b>Drilling techniques</b>	<ul style="list-style-type: none"> <li>Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</li> </ul>	<ul style="list-style-type: none"> <li>RC drilling was completed by several contractors using multiple modern RC rigs capable of significant drill depths. RC drilling uses a standard 5.5in bit and an auxiliary booster capable of 900psi, sufficient to keep sample dry at most depths. DD drilling was completed by contractors using multiple modern DD rigs. All drill rigs utilised by GG8 are industry best standard.</li> </ul>
<b>Drill sample recovery</b>	<ul style="list-style-type: none"> <li>Method of recording and assessing core and chip sample recoveries and results assessed.</li> </ul>	<ul style="list-style-type: none"> <li>RC sample recovery was qualitatively assessed by the field geologists. Good recoveries were had. DD recovery measured actual core length between drillers blocks to the nearest cm. Sample weights are recorded by the laboratory and average 3kg.</li> </ul>
	<ul style="list-style-type: none"> <li>Measures taken to maximise sample recovery and ensure representative nature of the samples</li> </ul>	<ul style="list-style-type: none"> <li>Sample depths were cross-checked regularly. The cyclone was regularly cleaned to ensure no material build up and sample material was checked for any potential downhole contamination. The drilling sample</li> </ul>

		recoveries/quality are acceptable and are appropriately representative for the style of mineralisation.
	<ul style="list-style-type: none"> <li>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</li> </ul>	<ul style="list-style-type: none"> <li>No obvious sample recovery biases or biases related to loss or gain of fines have been identified.</li> </ul>
<b>Logging</b>	<ul style="list-style-type: none"> <li>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</li> </ul>	<ul style="list-style-type: none"> <li>Logged for geology on the 1m intervals with chips washed and stored in chip trays by the geologist. Logging was inputted directly into the onsite laptops using suitable Company logging.</li> <li>DD core stored in trays with every metre logged.</li> <li>Logging is of a qualitative nature.</li> </ul>
	<ul style="list-style-type: none"> <li>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</li> </ul>	<ul style="list-style-type: none"> <li>RC chips and DD were logged for lithology, colour, weathering, texture and minerals present. Structural measurements and geotechnical data were recorded on DD core</li> </ul>
	<ul style="list-style-type: none"> <li>The total length and percentage of the relevant intersections logged.</li> </ul>	<ul style="list-style-type: none"> <li>N/A</li> </ul>
<b>Sub-sampling techniques and sample preparation</b>	<ul style="list-style-type: none"> <li>If core, whether cut or sawn and whether quarter, half or all cores taken.</li> </ul>	<ul style="list-style-type: none"> <li>Core is sawn with half cores taken for assay</li> </ul>
	<ul style="list-style-type: none"> <li>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</li> </ul>	<ul style="list-style-type: none"> <li>RC drilling single 1 metre splits were automatically taken at the time of drilling by a cone splitter attached to the cyclone. 4m composite samples were taken from sample piles. Samples have been dry. Samples are then riffle split at the lab into 0.5kg samples and crushed to 2mm prior to photon assay with a particle size distribution test to ensure 80% passing the 2mm threshold.</li> </ul> <p>SOILS</p> <ul style="list-style-type: none"> <li>Soil samples were submitted to LabWest in Perth where the -2µm particle size fraction is extracted using the Ultra Fine method developed by CSIRO and LabWest.</li> </ul>
	<ul style="list-style-type: none"> <li>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</li> </ul>	<ul style="list-style-type: none"> <li>The technique was appropriate for the work undertaken. During RC logging samples that showed mineralisation, veining or alteration had 1m split samples collected. 1m split samples are later taken from where 4m composites show &gt;0.2g/t gold anomalism. During DD logging any sulphide veining or alteration were sampled.</li> </ul> <p>SOILS</p> <ul style="list-style-type: none"> <li>The Ultra Fine Fraction sampling and analysis has been proven to be an effective technique for gold exploration across a wide range of regolith types.</li> </ul>
	<ul style="list-style-type: none"> <li>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</li> </ul>	<ul style="list-style-type: none"> <li>QAQC reference samples and duplicates were submitted by GG8. In house standards and blanks were also inserted by ALS.</li> </ul> <p>SOILS</p> <ul style="list-style-type: none"> <li>Sub-sampling is conducted by LabWest using their proprietary UFF method.</li> </ul>
	<ul style="list-style-type: none"> <li>Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling.</li> </ul>	<ul style="list-style-type: none"> <li>1m samples are automatically bagged from the cyclone, field duplicates are taken from a second chute off the splitter. DD duplicates are taken by sampling quarter core over the same interval as the primary sample.</li> </ul> <p>SOILS</p> <ul style="list-style-type: none"> <li>Every 50 samples a field duplicate is collected by digging a second pit within 2-3m of the original sample pit, homogenising and then sieving and collection of a dry 250g -2mm sample.</li> </ul>

	<ul style="list-style-type: none"> <li>Whether sample sizes are appropriate to the grain size of the material being sampled.</li> </ul>	<ul style="list-style-type: none"> <li>All RC samples are collected to approximately 1-5 kg. The sample sizes taken are appropriate relative to the style of mineralisation and analytical methods undertaken. DD sample size is appropriate.</li> </ul> <p>SOILS</p> <ul style="list-style-type: none"> <li>Sample sizes are appropriate for the grain size of the material sampled.</li> </ul>
<b>Quality of assay data and laboratory tests</b>	<ul style="list-style-type: none"> <li>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</li> </ul>	<ul style="list-style-type: none"> <li>All samples were sent to ALS laboratory in Kalgoorlie. Photon Assay method has shown to provide quick turnaround times and high accuracy.</li> </ul> <p>SOILS</p> <ul style="list-style-type: none"> <li>Samples were screened in the field to -2mm. LabWest then takes a sub-sample of &lt;2µm material for analysis.</li> <li>The UFF sample preparation was defined following a Research and Development project conducted under the direction of CSIRO.</li> <li>Field duplicates are submitted and perform to internal GG8 standards.</li> </ul>
	<ul style="list-style-type: none"> <li>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</li> </ul>	<ul style="list-style-type: none"> <li>All analytical results from drilling listed are from an accredited laboratory using photon assay method with fire assay as a check method.</li> </ul>
	<ul style="list-style-type: none"> <li>Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established.</li> </ul>	<ul style="list-style-type: none"> <li>Certified Reference Materials (CRMs) are included in each batch to ensure the reliability of the assay. These CRMs, such as OREAS254C, OREAS230, and OREAS241, are specifically chosen for photon assay to maintain quality standards and were evaluated against published certificates. The standard deviation was minimal for samples. Selected photon assays over a range of grades and from different parts of orebodies are umpire checked with Fire Assays and so far shows no material difference in reported grades.</li> </ul> <p>SOILS</p> <ul style="list-style-type: none"> <li>Field duplicates at a frequency of 1:50 are submitted and performed to GG8 internal standards.</li> </ul>
<b>Verification of sampling and assaying</b>	<ul style="list-style-type: none"> <li>The verification of significant intersections by either independent or alternative company personnel.</li> </ul>	<ul style="list-style-type: none"> <li>External verification has not been carried out, but values were checked against logging and photographs to ensure the intersected Au values are in line with logged alteration, mineralisation or veining. Significant intercepts have been verified by the Exploration Manager, the CEO and Principal consulting geologist.</li> </ul> <p>SOILS</p> <ul style="list-style-type: none"> <li>Significant results are revisited with ground-truthing and follow-up sampling where appropriate.</li> </ul>
	<ul style="list-style-type: none"> <li>The use of twinned holes</li> </ul>	<ul style="list-style-type: none"> <li>No twinned holes at this stage</li> </ul>

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<b>Mineral tenement and land tenure status</b>	<ul style="list-style-type: none"> <li>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</li> </ul>	<p>Gorilla Gold Mines Ltd 100% owns the projects through its wholly owned subsidiaries.</p> <p>COMET VALE</p> <p>M29/35, M29/52, M29/85, M29/185, M29/186, M29/197, M29/198, M29/199, M29/200, M29/201, M29/232, M29/233, M29/235, M29/270, M29/321</p> <p>Kakara Part A has been granted Native Title over the project area. The Company does not at present have any agreements with Kakara part A but are in the process of engagement.</p> <p>MULWARRIE</p> <p>M30/119, M30/145, E30/511, E30/512, E30/513, P30/1141, P30/1142, P30/1143.</p> <p>Marlinyu Ghoorlie has a Native Title claim over the project area. The Company has an existing agreement over the majority of the project area and is currently negotiating the inclusion of the additional tenements with Marlinyu Ghoorlie.</p>
	<ul style="list-style-type: none"> <li>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</li> </ul>	<ul style="list-style-type: none"> <li>No known impediments exist with respect to the exploration or development of the tenements.</li> </ul>
<b>Exploration done by other parties</b>	<ul style="list-style-type: none"> <li>Acknowledgment and appraisal of exploration by other parties.</li> </ul>	<ul style="list-style-type: none"> <li>See previous announcements. In particular ASX announcement, 13 September 2024, Review of Historical Vivien and Comet Vale Databases and the Bardoc/Spitfire ASX announcement 19 March 2019, High-grade diamond drilling results at mulwarrie confirm lode structures and pave way for resource upgrade.</li> </ul>
<b>Geology</b>	<ul style="list-style-type: none"> <li>Deposit type, geological setting and style of mineralisation.</li> </ul>	<p>COMET VALE &amp; MULWARRIE</p> <p>Archean orogenic gold mineralisation associated with major structures and mafic-ultramafic stratigraphy with intermediate intrusives adjacent to intracratonic monzogranites, gold mineralisation is associated with quartz veining, pyrrhotite, chalcopyrite, galena, sphalerite, and amphibole-biotite-chlorite alteration.</p>

<b>Drill hole Information</b>	<ul style="list-style-type: none"> <li>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> <li>easting and northing of the drill hole collar</li> <li>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</li> <li>dip and azimuth of the hole</li> <li>down hole length and interception depth</li> <li>hole length.</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>Tables reported in the announcement.</li> </ul>
	<ul style="list-style-type: none"> <li>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</li> </ul>	<ul style="list-style-type: none"> <li>No information material to the understanding of the exploration results has been excluded.</li> </ul>
<b>Data aggregation methods</b>	<ul style="list-style-type: none"> <li>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</li> </ul>	<ul style="list-style-type: none"> <li>Assay results reported here have been length weighted.</li> <li>No metal equivalent calculations were applied.</li> </ul>
	<ul style="list-style-type: none"> <li>Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</li> </ul>	<ul style="list-style-type: none"> <li>All samples were 1m or 4m samples were reported as returned.</li> </ul>
	<ul style="list-style-type: none"> <li>The assumptions used for any reporting of metal equivalent values should be clearly stated.</li> </ul>	<ul style="list-style-type: none"> <li>No weighting used.</li> </ul>
<b>Relationships between mineralisation widths and intercept lengths</b>	<ul style="list-style-type: none"> <li>These relationships are particularly important in the reporting of Exploration Results.</li> </ul>	<ul style="list-style-type: none"> <li>All samples reported are downhole width.</li> </ul>
	<ul style="list-style-type: none"> <li>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</li> </ul>	<ul style="list-style-type: none"> <li>Mineralization is generally perpendicular to drilling orientation.</li> </ul>
	<ul style="list-style-type: none"> <li>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</li> </ul>	<ul style="list-style-type: none"> <li>All intercepts are down hole lengths, true widths not yet determined.</li> </ul>

<b>Diagrams</b>	<ul style="list-style-type: none"> <li>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</li> </ul>	<ul style="list-style-type: none"> <li>Plans and sections are located in the body of the announcement.</li> </ul>
<b>Balanced reporting</b>	<ul style="list-style-type: none"> <li>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</li> </ul>	<ul style="list-style-type: none"> <li>All samples were reported for Au and their context discussed.</li> </ul> <p><b>SOILS</b></p> <ul style="list-style-type: none"> <li>The accompanying document is a balanced report with a suitable cautionary note.</li> <li>Statistics for UFF soil samples (Au) within the Comet Vale project to date (n: 2,377) are:  Minimum: 0.8 ppb  Maximum: 24,049 ppb  Median: 22 ppb  Mean: 77 ppb  S.D: 687 ppb  90%: 89 ppb  95%: 152 ppb  98%: 329 ppb</li> <li>Statistics for UFF soil samples (Au) within the Mulwarrie (Mulline) project to date (n: 472) are:  Minimum: 0.6 ppb  Maximum: 63.1 ppb  Median: 5.7 ppb  Mean: 7.4 ppb  S.D: 7 ppb  90%: 12.9 ppb  95%: 17.6 ppb  98%: 33.5 ppb</li> </ul>
<b>Other substantive exploration data</b>	<ul style="list-style-type: none"> <li>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</li> </ul>	<ul style="list-style-type: none"> <li>All other relevant data has been included within this report.</li> </ul>
<b>Further work</b>	<ul style="list-style-type: none"> <li>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</li> </ul>	<p><b>COMET VALE</b>  Additional soil sampling across the Comet Vale project is planned. Drilling is ongoing, refer to end of text for more comprehensive update.</p> <p><b>MULWARRIE</b>  Additional soil sampling across the Mulwarrie project is planned and drilling is scheduled to recommence in Q4 2025.</p>

	<ul style="list-style-type: none"><li>▪ Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</li></ul>	<ul style="list-style-type: none"><li>▪ Supporting diagrams are all found in the body of the text.</li></ul>
