Successful Completion of MOSAIC customer BETA program

HIGHLIGHTS

- **Successful completion** of the MOSAIC Customer BETA Program involving a select group of Australian freight forwarders and customs brokers.
- **Concept validation** of Platform Robustness and Deployment of Agentic AI Roadmap
- **Real World operational validation** achieved with no major defects or structural areas of concern identified during real-world testing.
- **Strategic Evolution of "Tess"**: Beta engagement has identified prioritized pathways for Agentic AI to move beyond document ingestion into automated data cleansing and proactive exception management.
- **On Track for Commercial Release**: Results confirm readiness for commercial launch in H2 FY26.

Yojee Limited (ASX: YOJ) ("Yojee" or "the Company") is pleased to announce the successful completion of the Customer BETA Program for its flagship MOSAIC platform. The program was designed to validate platform robustness in real-world operating environments while gathering structured user feedback ahead of commercial release.

Operational Validation & Performance Insights

The BETA program involved operators performing real-world use-case testing across Export Airfreight workflows. Key milestones successfully achieved include:

- **Workflow Execution**: Operators successfully entered a minimum of 10 real-world jobs into their respective databases.
- **Regulatory Integration**: Successful bi-directional messaging with Australian Customs (ICS), including sending Export Declarations (EDNs) and receiving responses.
- **Industry Messaging**: Full validation of Air Waybill (AWB) messaging and Airline response cycles.

Direct observation of these operators provided meaningful insights into workflow efficiency. The platform satisfied all core requirements to complete jobs within the BETA scope without material defect.

Continuous UX Refinement

While the core infrastructure proved robust, the Company has identified targeted user experience (UX) refinements to further streamline the interface. Further iteration is currently underway to optimize these workflows, ensuring that the platform is not only fast but intuitive for experienced operators transitioning from legacy systems.

The Evolution of "Tess" and Agentic AI

A primary objective of the BETA was to monitor operator engagement to identify friction points where manual oversight still dominates. This feedback is now driving the development of "Tess" the platform's AI assistant.

The Company's vision for Tess is intended to move beyond simple document ingestion into **Agentic AI** capabilities, including:

- **Automated Data Cleansing:** Utilising AI to identify and correct inconsistencies during job creation to reduce manual verification.
- **Exception Management:** Developing intelligent guidance to flag potential supply chain blocks before they impact operations.
- **Decision Support:** Empowering operators with intelligent data assistance to improve revenue capture and cost control.

Commercial Roadmap

Yojee remains on track for the **commercial release of MOSAIC in H2 FY26**. Several **#BePartOfSomething** program participants have expressed interest in progressing to commercial engagement, with discussions ongoing. While no material revenue has been recognized from the BETA program, the high engagement levels provide encouraging indicators ahead of the commercial rollout.

Mark Connell, CEO of Yojee:

“The completion of our MOSAIC BETA program is an important milestone. Importantly, the platform has been validated under real-world operating conditions without material defect.

The insights gained from watching experienced operators process real jobs have allowed us to refine workflows in ways that directly improve productivity. We believe these improvements position MOSAIC to deliver measurable efficiency gains to forwarders and customs brokers.

Importantly, the insights gained from watching operators process real jobs have allowed us to prioritize our AI roadmap. We believe that by integrating Agentic AI for data cleansing and exception management, we can move the industry away from manual data entry toward a more proactive, decision-first model.

Our vision is to deliver a global, disruptive, AI-enabled freight and customs platform that challenges legacy systems and thinking. The successful BETA program brings us materially closer to that objective.”
