The red ocean in small value payments <3% of card volume

Includes all card transactions made via a digital wallet, including tokenized digital wallet. Include: Digital wallet transactions made by using electronic devices, such as smartphone, smart watch, or activity tracker, by "tapping" the device at the point-of-sale (POS) terminal (i.e., Apple Pay, Samsung Pay, Google Pay, Fitbit Pay, Masterpass). Also include tokenized digital wallet transactions made by using customer's payment credentials saved in a virtual account number. These credentials can be stored either on a smartphone or in the cloud. When making a purchase, a substitute account number and a transaction specific code ("token") are used to process payments. This can include purchasing items online with a computer or using a smartphone to make a purchase with a browser or in-app (i.e., Apple Pay, Google Pay, Masterpass, Visa Checkout, Amex Express Checkout). Include digital wallet near-field communication (NFC) transactions, MST (magnetic secure transmission) transactions, quick response (QR) code transactions, barcode transactions, in-app transactions, or browser transactions. Do not include: Card-on-file e-commerce transactions (cardholder-initiated or merchant-initiated) (i.e., installment payment) or transactions made via contactless cards (i.e., "tap and pay").

▲ eBay's buyer protection ... but what about a seller who has been scammed? Photograph: NetPhotos/Alamy

I appear to have been scammed after I sold a £450 pair of trainers on eBay about a month ago to a "buyer" in the US.

They paid straight away, and the delivery address was a business in New York, but there was no contact name and they had zero feedback. This concerned me, but I believed I'd be protected by eBay.

I took pictures of the shoes and the box from every angle, and then I bubble-wrapped and double-boxed them so there was zero chance of any damage, and the buyer couldn't possibly dispute their condition. Which is exactly what happened.
