For Immediate Release

DIMERIX TO PRESENT AT OPPENHEIMER'S 36TH ANNUAL HEALTHCARE LIFE SCIENCES CONFERENCE 2026

MELBOURNE, Australia, 27 February 2026: Dimerix Limited (ASX: DXB), a biopharmaceutical company with a Phase 3 clinical asset in kidney disease, is pleased to advise that CEO and Managing Director, Dr Nina Webster, will be presenting at the Oppenheimer 36th Annual Healthcare Life Sciences Conference, held in New York and virtually on 27 February 2026 (26 February US time).

Dr Webster will present an update on the following:

- Phase 3 global clinical trial in FSGS kidney disease, including updated patient numbers and a breakdown on recruitment by country
- Next steps, including the planned blinded statistical powering review
- Commercial partnering status
- Company growth strategy

A copy of the presentation is attached.

About Dimerix Limited

Dimerix (ASX: DXB) is a clinical-stage biopharmaceutical company working to improve the lives of patients with inflammatory diseases, including kidney diseases. Dimerix is currently focused on developing its proprietary Phase 3 product candidate DMX-200, for Focal Segmental Glomerulosclerosis (FSGS) kidney disease. DMX-200 was identified using Dimerix' proprietary assay, Receptor Heteromer Investigation Technology (Receptor-HIT), which is a scalable and globally applicable technology platform, enabling the understanding of receptor interactions to rapidly screen and identify new drug opportunities. For more information, please visit the company's website at www.dimerix.com and follow on X and LinkedIn.

About DMX-200

DMX-200 is a chemokine receptor (CCR2) antagonist administered to patients already receiving an angiotensin II type I receptor (AT1R) blocker, the standard of care treatment for hypertension and kidney disease. DMX-200 is protected by granted patents in various territories until 2032, with patent applications submitted globally that may extend patent protection to 2045, in addition to Orphan Drug Designation granted in the United States, Europe, UK and Japan[1].

About FSGS

FSGS is a rare, serious kidney disorder characterised by progressive scarring (sclerosis) in parts of the glomeruli—the kidney's filtering units. This scarring leads to proteinuria, progressive loss of kidney function, and often end-stage renal disease. FSGS is increasingly understood to have an inflammatory component, with monocyte and macrophage activation contributing to glomerular injury. In the United States, more than 40,000 people are estimated to be living with FSGS, including both adults and children.[2] There are no therapies specifically approved for FSGS in the U.S., and disease management relies on non-specific immunosuppressive and supportive therapies. In patients with progressive or treatment-resistant FSGS, the average time from diagnosis to end-stage kidney disease can be as short as five years. Even among those who undergo kidney transplantation, disease recurrence occurs in up to 60% of cases,[3] underscoring the urgent need for new, disease-modifying treatments.

About ACTION3 FSGS CLINICAL STUDY **FSGS Phase 3 Study**

The ACTION3 Phase 3 study is a pivotal Phase 3, multi-centre, randomised, double-blind, placebo-controlled study of the efficacy and safety of DMX-200 in patients with FSGS who are receiving a stable dose of a blood pressure medication known as an angiotensin II receptor blocker (ARB). Once the ARB dose is stable, patients are then randomised to receive either DMX-200 (120 mg capsule, twice daily) or placebo for a 2-year treatment period. The single Phase 3 trial in FSGS patients is designed to capture evidence of proteinuria reduction and kidney function (eGFR slope) during the trial, aimed at generating sufficient evidence to support marketing approval.

Further information about the study can be found on ClinicalTrials.gov (Study Identifier: NCT05183646) or Australian New Zealand Clinical Trials Registry (ANZCTR) (Study Identifier ACTRN12622000066785).

Dimerix Forward Looking Statement

This release includes forward-looking statements that are subject to risks and uncertainties. Although management believes that the expectations reflected in the forward-looking statements are reasonable at this time, Dimerix can give no assurance that these expectations will prove to be correct. Readers are cautioned not to place undue reliance on forward-looking statements. Actual results could differ materially from those anticipated. Reasons may include risks associated with drug development and manufacture, risks inherent in the regulatory processes, delays in clinical trials, results of clinical trials, contractual risks, risks associated with patent protection, future capital needs or other general risks or factors, including but not limited to those factors outlined in the most recent Dimerix Limited Annual Report.

ACTION3
FSGS CLINICAL STUDY

Developing new therapies to treat inflammatory causes of kidney disease with unmet clinical needs

Investor Presentation

Oppenheimer 36th Annual Healthcare Life Sciences Conference

New York: 26 February 2026

Authorised for lodgement by the Board of the Company

Forward looking statements

This presentation includes forward-looking statements that are subject to risks and uncertainties. Although we believe that the expectations reflected in the forward looking statements are reasonable at this time, Dimerix can give no assurance that these expectations will prove to be correct. Readers are cautioned not to place undue reliance on forward-looking statements.

Actual results could differ materially from those anticipated. Reasons may include risks associated with drug development and manufacture, risks inherent in the regulatory processes, delays in clinical trials, results of clinical trials, contractual risks, risks associated with patent protection, future capital needs or other general risks or factors, including but not limited to those factors outlined in the most recent Dimerix Limited Annual Report.

Overview | Phase 3 Global Opportunity

Phase 3 trial **recruitment complete** in trial of DMX-200 in focal segmental glomerulosclerosis (FSGS)

FSGS indication is a **rare disease** that causes scarring of the kidney, leading to irreversible damage[1]

No approved treatments specifically for FSGS: damage can lead to **dialysis, transplant or death**[1]

Orphan drug designations regulatory, marketing exclusivity and pricing **benefits** in key territories[2]

4 commercial partners **DMX-200 licensed** in USA, Europe, Canada, Australia, NZ, Japan and GCC[3]

up to $1.4 billion in total development and sales milestone payments **plus** royalties[3]

>$65 million in total upfront **payments received** to date[3]

Dimerix

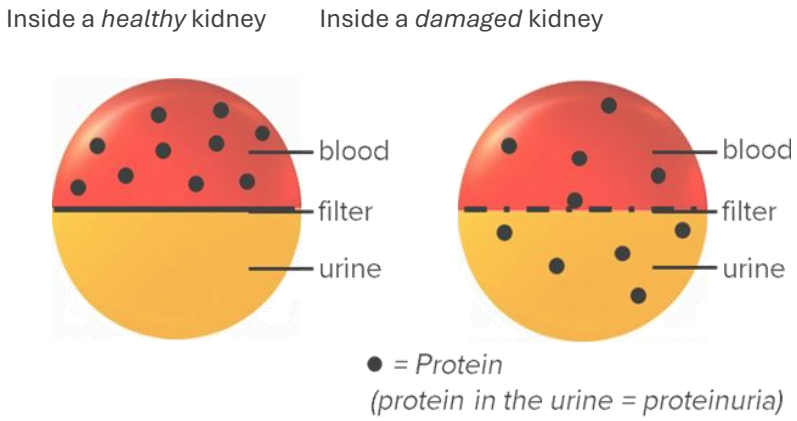
Measuring kidney damage – surrogate endpoints

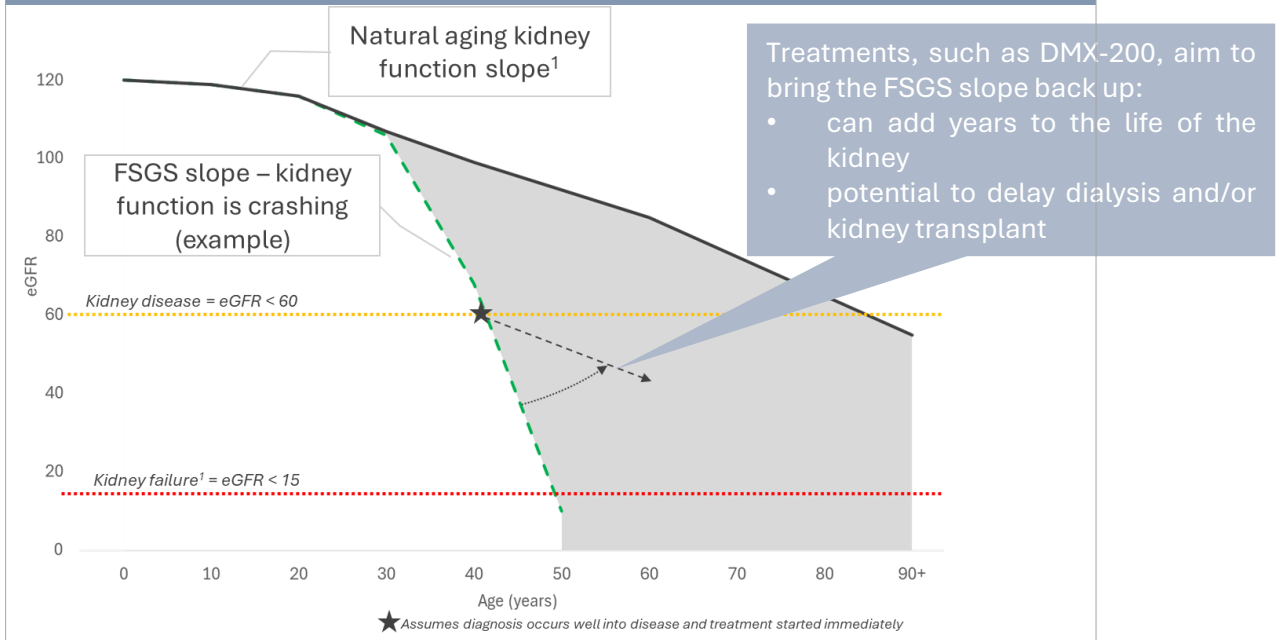
1. Proteinuria

- A healthy kidney is a good filter and allows little to no protein into the urine[2]



- When kidneys are damaged, protein can leak into the urine causing proteinuria
- Proteinuria represents an important early marker of kidney function[3]

2. Estimated glomerular filtration rate (eGFR)



- Kidney function is measured using the estimated rate of blood filtered by the kidney per minute (millilitres per minute)
- eGFR slope naturally declines as we age[1]
- In FSGS patients, kidney function is decreasing rapidly

Dimerix

1. National Kidney Foundation: Estimated Glomerular Filtration Rate (eGFR): https://www.kidney.org/atoz/content/gfr; 2.Guruswamy Sangameswaran KD, Baradhi KM. Focal Segmental Glomerulosclerosis (July 2021), online: https://www.ncbi.nlm.nih.gov/books/NBK532272/; 3. DMX-200 –inflammatory modulator

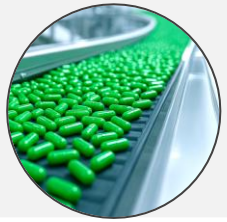
A CCR2 inhibitor working synergistically alongside the current standard of care (AT1R blocker): G protein-coupled receptor (GPCR)

Commercial manufacturing sites established in USA[3]	1 x 120mg capsule BID	Well tolerated with no safety concerns to date (>400 patients dosed)[3]	4 clinical studies completed to date: positive safety and efficacy signals across studies[3]
			


Small molecule	**Easy & convenient dosing**	**No safety concerns noted[3]**	**Positive efficacy signals[3]**

1. ASX release and investor presentation 29Jul20 and ASX release 11Mar24 BID: bis in die/ twice a day

DMX-200: unique pharmacology

- CCR2 activation promotes recruitment of inflammatory monocytes to the kidney

  DMX-200 **inhibits** CCR2[1]

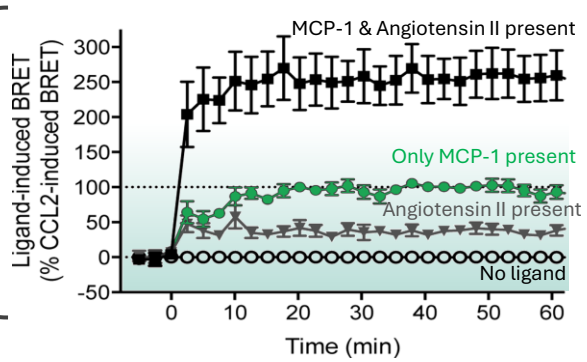
- Monocytes promote sclerosis and fibrosis of the kidney

  DMX-200 **reduces** inflammatory cells[1,2,3]

- Podocytes are the essential filter cells of the kidney

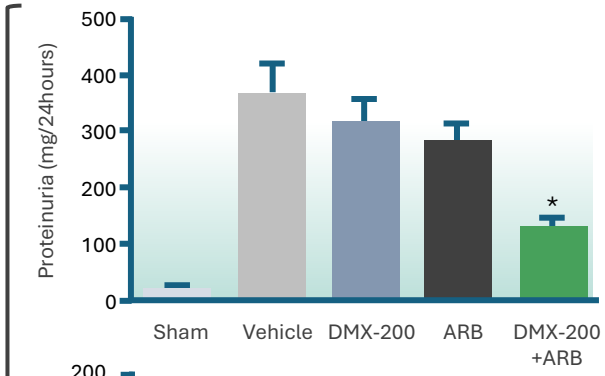
  DMX-200 **preserves** podocytes[1]

in-vitro

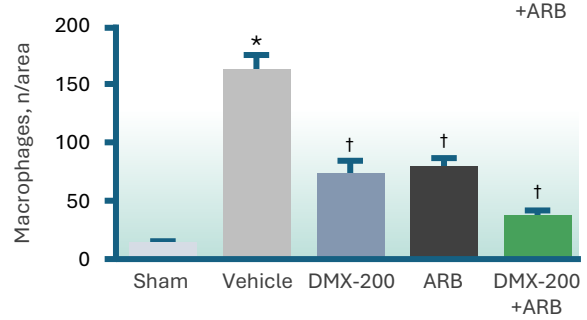


Complex of CCR2 and AT1R increases aberrant signaling when both receptors activated[1]

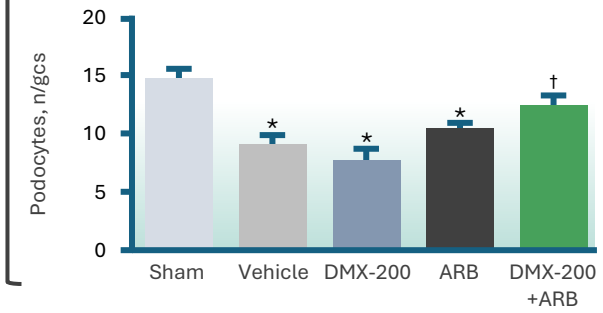
in-vivo[1]



Simultaneous inhibition of CCR2 and AT1R reduces proteinuria an important early marker of kidney function[1]



Simultaneous inhibition of CCR2 and AT1R reduces recruitment of monocytes to the kidney[1]



Simultaneous inhibition of CCR2 and AT1R preserves the number of essential filter cells (podocytes) in the kidney[1]

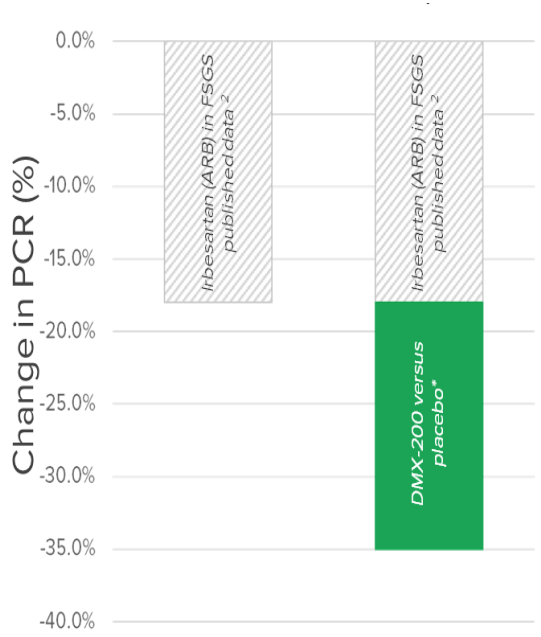
Dimerix

1. Ayoub MA, et al. (2015) PLoS One; doi.org/10:e0119803; 2. ASX presentation 27 October 2020; 3. Liu Y. et al (2024) Role of MCP-1 as an inflammatory biomarker in nephropathy, Front. Immunol., Sec. Inflammation doi.org/10.3389/fimmu.2023.1303076; CCR2: C-C chemokine receptor type 2; AT1R: Angiotensin II type 1 receptor; MCP1: Monocyte chemoattractant protein-1 (also known as CCL2, the ligand for CCR2); BRET: Bioluminescence Resonance Energy Transfer Assay; PCR = protein creatinine ratio; *P<0.05 vs sham STNx rats ; P<0.05 vs vehicle STNx rats;

DMX-200: Phase 2 met primary and secondary endpoints

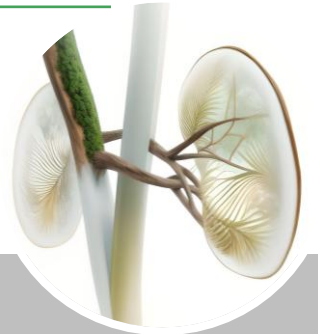
Clinically encouraging outcomes achieved for patients,[1,2] with no safety concerns noted[3]

Average reduction of **17%** in proteinuria after 16 weeks treatment on DMX-200 versus placebo[3]



"Any reduction in proteinuria could yield years of preserved native kidney function and delay the onset of kidney failure and its attendant morbidity and mortality"

Kidney survival study – Troost et al, August 2020[2]



EFFICACY

- **86%** of patients demonstrated reduced proteinuria
- DMX-200 reduced inflammatory biomarker by **39%** vs placebo

SAFETY

- No safety concerns – reduced development risk

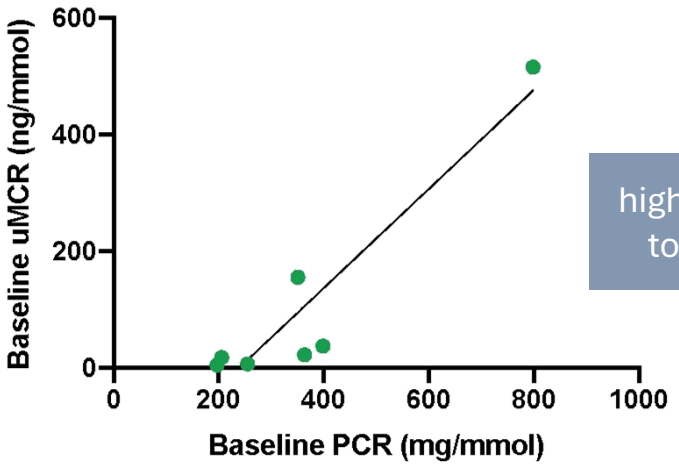
Dimerix

PCR = protein creatinine ratio; ARB = angiotensin receptor blocker; 1. Trachtman, et al., 2018. J Amer Soc Nephrology 29(11):2745-2754; 2. Troost JP et al (August 2020); doi.org/10.1053/j.ajkd.2020.04.014; 3. Repeated measures mixed model analysis per protocol; top line data was reported as grouped analysis on 29 July 2020, study not designed for statistical significance;

DMX-200 Phase 2 effect on inflammatory biomarker[1]

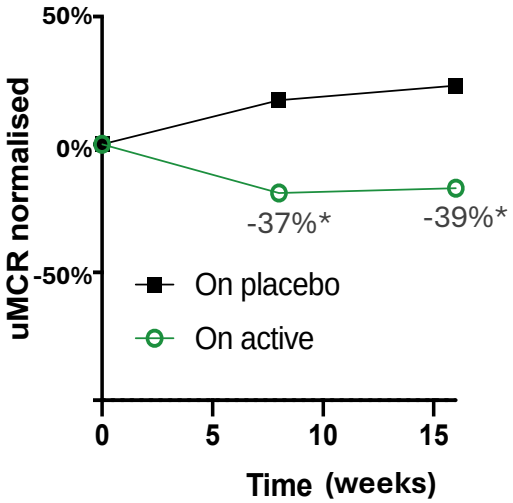
Unlike other CCR2 antagonists investigated to date, treatment with DMX-200 reduces the urine concentration of the pro-inflammatory ligand of CCR2 called MCP-1[2]

Average baseline MCP-1 versus average baseline proteinuria



high MCP-1 correlates to high proteinuria

Change in MCP-1 over time on DMX-200 versus placebo



MCP-1 levels reduced when on DMX- 200 treatment

- **16 weeks treatment with DMX-200 vs placebo reduced inflammatory biomarker by 39%:**
  - DMX-200 blocks receptor responsible for inflammation
  - Translates to reduced inflammation and subsequent fibrosis (scarring) in the kidney[2]

Dimerix

*uMCR = Urinary MCP-1 creatine ratio; PCR = protein creatinine ratio; *placebo adjusted difference*

1. ASX presentation 27 October 2020; 2. Liu Y. et al (2024) Role of MCP-1 as an inflammatory biomarker in nephropathy, Front. Immunol., Sec. Inflammation doi.org/10.3389/fimmu.2023.1303076

ACTION3 phase 3 clinical trial

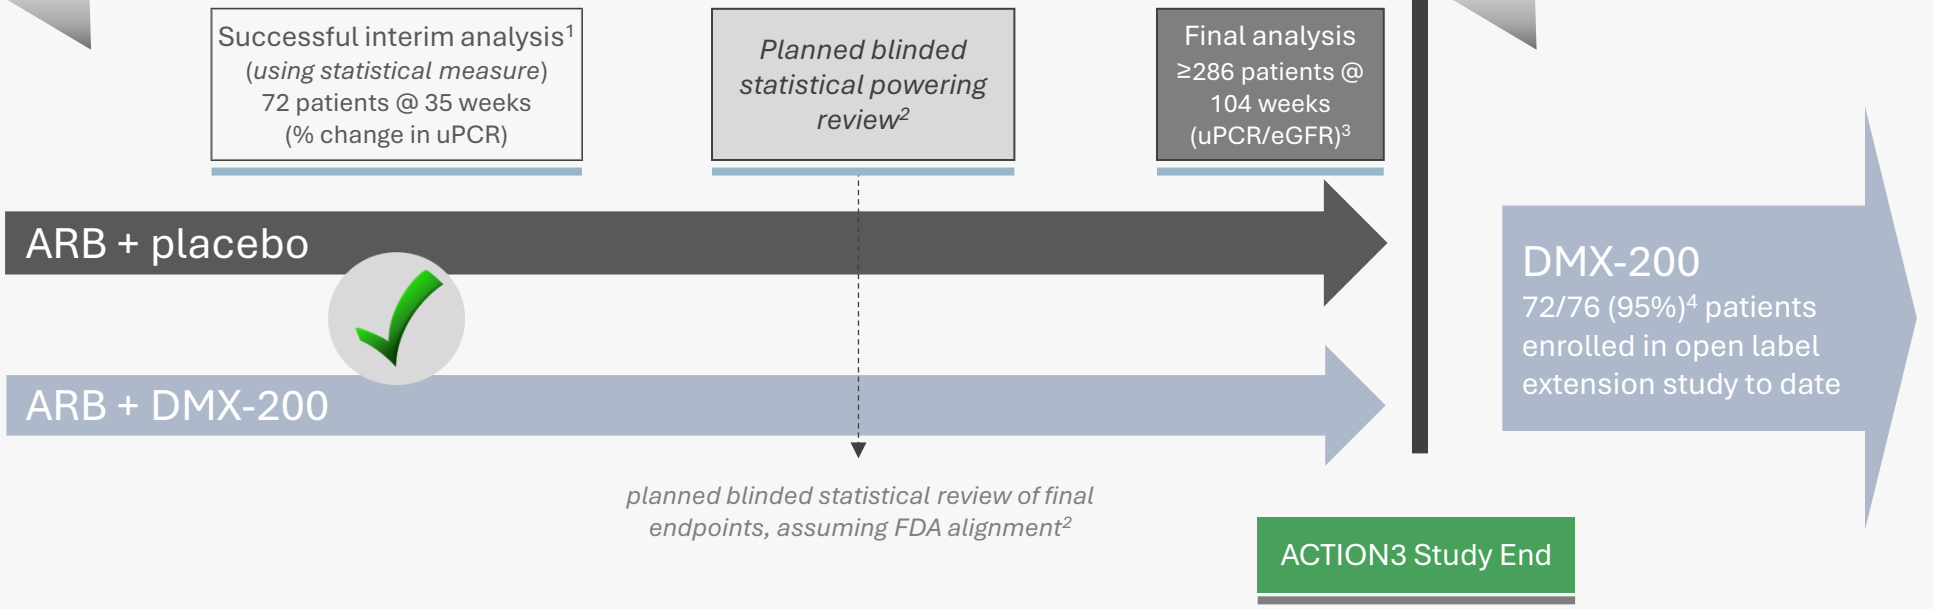
FSGS CLINICAL STUDY

A randomised, double-blind, multi-centre, placebo-controlled study of renal outcomes of DMX-200 in patients with FSGS receiving an ARB (n=≥286)

Background

- Patients recruited, then screened and stabilised on background medications
- Patients randomised to receive drug or placebo
- DXB remains blinded at all times during study

Phase 3 Trial Timeline



Open Label Extension

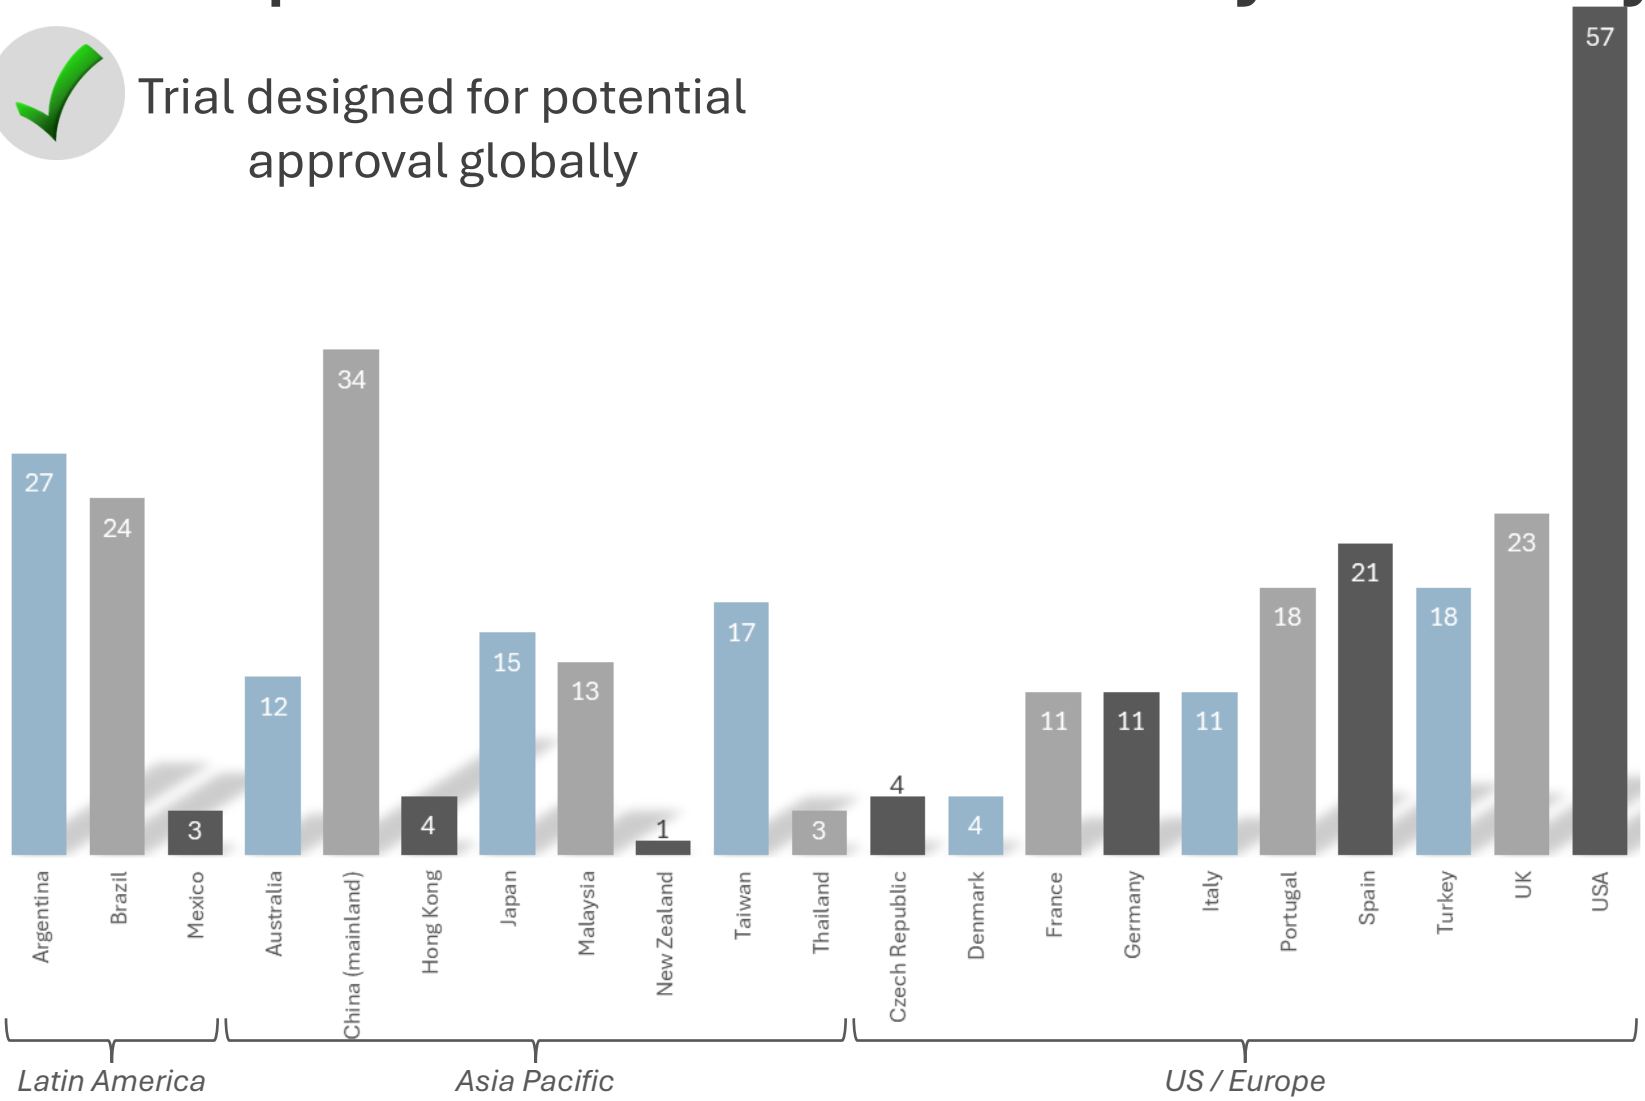
DMX-200
72/76 (95%)[4] patients enrolled in open label extension study to date

Dimerix

1. Blinded interim Phase 3 analysis data does not guarantee a statistically significant outcome at the end of the trial, ASX release 11 March 2024; 2. The potential for accelerated (or conditional) approval submissions, following the second blinded interim review and any required unblinding, will be assessed based on discussions with the appropriate regulatory authorities such as the FDA in the US and blinded statistical powering outcomes; 3. Regardless of any accelerated (conditional) approval potential, ACTION3 study will complete full 2 year analysis and regulatory submission for potential traditional (full) approval; 4. number and % of eligible patients who have completed 2 years treatment as at 04 February 2026; ARB = angiotensin receptor blocker; uPCR = urinary proteinuria; eGFR = estimated glomerular filtration rate (kidney function);

Adult patient recruitment by territory

Trial designed for potential approval globally



Recruitment completed

(adult population)[1]

331

Adult patients recruited, randomised and dosed (target ≥286)[2]

5

Paediatric patients recruited, randomised and dosed[2]

1. ASX release 15 December 2025; 2. As at 26 February 2026, allowing for those recruited to complete stabilisation and second screening; paediatric patients will continue to recruit, and will not impact final analysis timelines

Dimerix

PARASOL: proteinuria as an endpoint for full FDA approval

1

PARASOL FSGS Working Group 2024

➢ PARASOL was formed in Dec-23 to address the need to **validate alternative surrogate endpoints** for FSGS, and is a coalition of nonprofit organizations, academia, registries, trials and Sponsors to share data to support analysis[1]

- PARASOL confirmed that eGFR slope is a valid endpoint for predicting progression of kidney disease
- It is recognised FSGS patients see higher proteinuria, even in remission, due to residual scaring of the glomeruli
- PARASOL data demonstrated the strong relationship between a reduction in proteinuria and a reduction in the progression of kidney disease in FSGS patients

- Reduction in proteinuria is now a validated endpoint for full FDA approval

2

Biological Plausibility

➢ The FDA has emphasised the need for programs wishing to use proteinuria endpoints to be able to justify the biological plausibility (scientific rationale of why or how the drug candidate is having the desired effect) of the drug on the endpoint chosen

- Dimerix has existing preclinical evidence on the preservation effect of DMX-200 on the specialist cells on the kidney – the podocytes
- Dimerix has existing clinical and preclinical evidence of reduced recruitment of monocytes to the kidney and reduced MCP-1 levels

- PARASOL has increased the range of potential endpoints that may best show the treatment effect of DMX-200

3

ACTION3 capturing all proposed endpoint data: eGFR and proteinuria

Proteinuria

- Randomised, double blind PCR values over 24 months
- PCR captured across 4-week washout
- PCR measured over additional 24 month open-label period

eGFR slope

- Randomised, double blind eGFR values captured over 24 months, including raw values and total eGFR slope

Other endpoints

- Classical definitions of complete and partial remission
- PARASOL-informed response endpoints
- Hard-renal endpoints (where available)

1. Coalition made up of: NephCure, ISGD, NKF, KHI are co-sponsors of the project, FDA and EMA involvement, University of Michigan is data coordinating center, Industry invited as participants

ACTION3 next steps

FSGS CLINICAL STUDY

PARASOL working group conducted “ACTION3-like” population analysis of larger PARASOL observation dataset[1,2]

- Results of this analysis are generally consistent with the broader PARASOL analysis conducted in 2024
- Potential relationship between proteinuria at 12 months and subsequent risk of kidney failure observed that may support proteinuria as an endpoint for marketing approval

Step 1

PARASOL FSGS working group 12-month data analysis received[1]

Step 2

Seek FDA alignment on endpoints and process for blinded review[2]

Assumes FDA aligned with endpoints and review process

Step 3

Blinded review to assess endpoint power; ACTION3 clinical study protocol updates[2,3]

Timing of analysis based on protocol update in each territory

Step 4

Final decision timeline for traditional and/or accelerated approval submission[2,3]

~CY Q1 2026[2]

Regardless of outcome, ACTION3 study will complete full 2 year analysis for regulatory submission for potential traditional (full) approval

Dimerix

1. ASX release 08 October 2025; 2. ASX release 28 April 2025 and 24 December 2025; 3. The potential for unblinding and accelerated (or conditional) approval submissions will be assessed based on further discussion and agreement with the appropriate regulatory authorities such as the FDA in the US and the outcomes of the planned blinded statistical review

Competitive landscape in FSGS

- Low competition in inflammatory treatment options, large unmet medical need
- DMX-200 is the only inflammatory modulator in development

	Phase 1	Phase 2	Phase 3	Company
DMX-200	*Inflammatory modulator*			Dimerix
Sparsentan	*AT1R/ETAR dual antagonist – Failed Phase 3 eGFR endpoint: resubmitted to FDA on proteinuria endpoints*			Travere Therapeutics
VX-147	*APOL1 inhibitor – targeting a specific type of genetic FSGS*			Vertex Pharmaceuticals
BI-764198	*TRPC6 inhibitor*			Boehringer Ingelheim
Atrasentan	*ETAR antagonist*			Chinook
Frexalimab, Brivekimig, Rilzabrutinib (basket)	*CD40L antagonist, TNF-α/OX40L antagonist, TKI*			Sanofi
R3R01	*Lipid modifying*			River 3 Renal

Sources: Company Documents, Statutory and Regulatory Filings

Rare kidney disease – a potential growth market

Biopsy

FSGS diagnosis driven by rates of biopsy - growth potential as biopsy rates increase

7 per 1,000,000

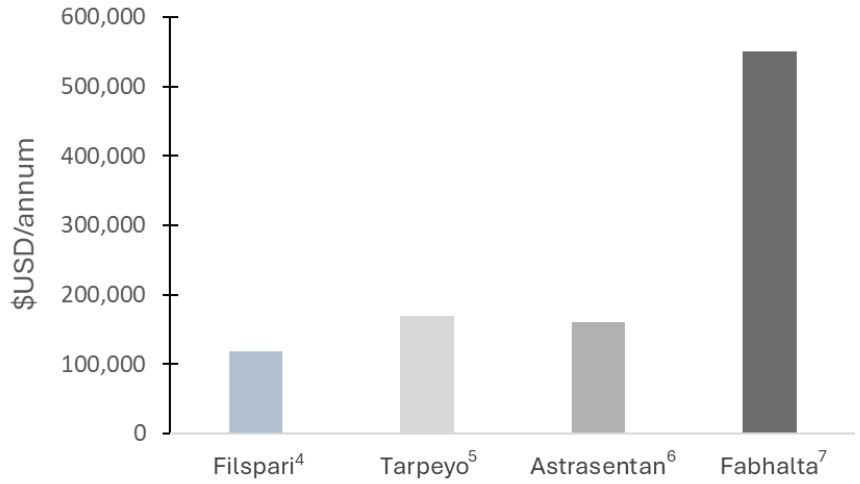
Global incidence rate of FSGS per capita, per year[1]

FSGS is the most frequent primary glomerular disease that reaches end-stage renal failure in the US[2]

DMX-200

Commercial manufacturing sites established in USA[3]

Example pricing: USA retail price for IgA Nephropathy products



Example price for other rare kidney disease drugs per patient:

- *in the US (i.e. Kinpeygo/Tarpeyo in IgAN)[8]:* ***US$15,123 per month***
- *in the UK (Kinpeygo/Tarpeyo in IgAN)[9]:* ***US$8,797 per month***

Other key territories, including Middle East and China, use US and/or Europe as pricing reference[10]

DMX-200 de-risked Phase 3 renal asset

- ACTION3 primary endpoint: proteinuria has potential for stronger statistical power to resolve DMX-200 effect[1]
- Proteinuria endpoint de-risked: passed blinded interim (futility) assessment (March 2024)[2]
- Commercial validation: 4 commercial partner across key territories[3]
- Study fully recruited: fixed timelines to full study completion in Q1 2028[4]
- Passed 7 safety data monitoring meetings with no protocol changes requested[5]
- Strong uptake into open label extension study: indicates patient willingness to continue treatment
- Indication extension: DMX-200 proposed mechanism of action potentially suited to other inflammatory renal indications

1. ASX release 24 Dec 2025; 2. ASX release ASX release 11 March 2024 ; 3. ASX release 01 May 2025; 4. ASX release 15 Dec 2025; 5. ASX release 1 Nov 2025

Growth strategy

Deliver ACTION3 Phase 3 clinical trial

- Ensure drug supply continuity and patient visits for recruited patients
- Complete recruitment of paediatric patients
- Maintain regulatory engagement (FDA, EMA, PMDA, NMPA + others)
- With partners, prepare for potential market approval and launch readiness

Expand global commercial partnerships

- Build on existing licensing agreements and relationships
- Secure additional partnerships to expand and accelerate market access

Advance pipeline development

- Identify and progress new assets in renal and/or rare disease indications
- Leverage DMX-200 platform for additional indications

Grow sustainable shareholder value through clinical success, global partnerships, and pipeline diversification

PhD

Professor of Clinical Trials and Personalized Medicine: University Medical Center Groningen, the Netherlands. He specializes in the research of novel treatment approaches to slow the onset of diabetic cardiovascular and renal disease. Hiddo has been instrumental in interactions between industry, researchers and regulatory agencies in the validation of surrogate endpoints for renal trials.

Professor
Alessia Fornoni
MD, PhD, FASN

Professor of Medicine & Molecular & Cellular Pharmacology: University of Miami. Chief of the Katz Family Division of Nephrology and Hypertension. She has an extensive history of translational excellence for patients with renal disease and has uncovered novel pathogenetic mechanisms and therapeutic approaches for glomerular disorders.

Professor
Jonathan Barratt
MD, PhD, FRCP

Mayer Professor of Renal Medicine: Department of Cardiovascular Sciences; University of Leicester and Nephrologist. Jonathan is the IgA nephropathy Rare Disease Group lead for the UK National Registry of Rare Kidney Diseases (RaDaR) and a member of the steering committee for the International IgA Nephropathy Network.

Associate Professor
Lesley Inker
MD, MS, FRCPC

An attending physician and Director of the Kidney and Blood Pressure Center in the Division of Nephrology at Tufts Medical Center. Lesley's major research interest is in the estimation and measurement of glomerular filtration rate (GFR) and in defining alternative endpoints for CKD progression trials based on GFR decline and changes in albuminuria.

Dr Muh Geot Wong
MBBS, PhD, FRCP

Renal Physician and Head of the Renal Clinical trials at the Royal North Shore hospital, Sydney, Australia. Muh Geot's main areas of research are in understanding the mechanisms of kidney fibrosis, biomarkers research, and identifying strategies in delaying progressive kidney disease including glomerular diseases.

Professor
Howard Trachtman
MD, FASN

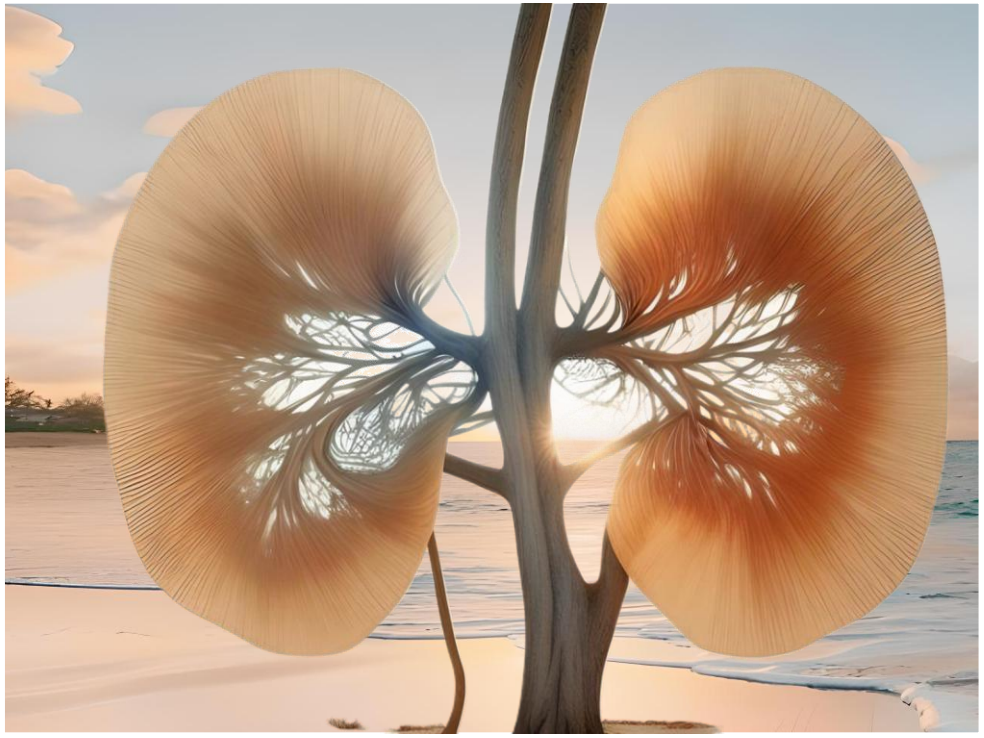
Graduated from Haverford College and the University of Pennsylvania School of Medicine. He has been a practicing pediatric nephrologist for 35 years. Has been the PI of NIDDK and industry sponsored clinical trials in glomerular disease and am a Co-Investigator in the NEPTUNE and CureGN observational cohort studies.

Associate Professor
Laura Mariani
MD, MSCE

Assistant Professor in the Division of Nephrology at the University of Michigan. Interest in observational studies in glomerular disease, including NEPTUNE and CureGN. Lead on PARASOL program to define FSGS endpoints with by applying statistical methods for clinical outcome definition and prediction of kidney disease progression.

Dimerix

(ASX:DXB)



A biopharmaceutical company developing innovative new therapies in areas with unmet medical needs, with a core focus on inflammatory disease treatments such as kidney and respiratory diseases.
