

ASX ANNOUNCEMENT

23 March 2026

TOLL TREATMENT AGREEMENT SIGNED WITH CALIX LIMITED TO COMMERCIALY PRODUCE ECO-CLAY

- Binding Toll Treatment Agreement (Agreement) executed with Calix Limited (ASX:CXL) for the commercial manufacture of Green360's low carbon cement replacement product Eco-Clay
- Provides Green360 with a capital-light pathway to establish Green360 as Australia's first commercial supplier of metakaolin for use in low-carbon cement – sales expected to commence this half
- Under the Agreement, up to 30,000 tonnes p.a. of capacity is made available to Green360¹ to produce Eco-Clay utilising the vertical flash calciner located at Calix's Baccus Marsh facility, located between Green360's Pittong Kaolin Operation and Melbourne
- Commercial quantities of Eco-Clay produced at Calix's facility have previously been successfully delivered to a national concrete supplier demonstrating compliance with the industry's existing supply chains²
- Eco-Clay, a high reactivity metakaolin, is a sought-after partial replacement for traditional Portland cement in concrete mixes, improving strength and durability, and reducing carbon emissions

Green360 Technologies Limited (ASX:GT3) (Green360 or the Company) is pleased to announce that it has entered into a Binding Toll Treatment Agreement (**Agreement**) with environmental technology company Calix Limited (**Calix**) (ASX:CXL), to commercially manufacture Eco-Clay (high reactivity metakaolin) for supply into the Australian concrete market.

Green360 Technologies Executive Chairman Aaron Banks commented: *"This Agreement with Calix is the final step in commercialising Eco-Clay and a major milestone for Green360. We have already proven our ability to successfully deliver commercial volumes of Eco-Clay to a major concrete producer, and with this agreement, we can now rapidly scale production to meet growing demand for low-carbon construction materials with minimal capital outlay. Eco-Clay is a compelling solution for Australia's concrete industry to reduce carbon emissions."*

Green360 is engaged with a range of industry participants including large scale contractors, government infrastructure alliances and several concrete suppliers who have all tested Eco-Clay in

various mix designs. Feedback has been positive on the utilisation of the product in commercial applications and completing this toll treating agreement provides the Company with the ability to enter into commercial sales transactions, the first of which it expects to sign this half. This is a truly exciting time for Green360 and the decarbonisation of Australia's concrete industry"

Calix is a highly successful Australian technology company that solves global challenges in industrial decarbonisation and sustainability. Calix has previously assisted Green360 in the commercial manufacture of Eco-Clay at their facility for use in large scale trials³.

Under this Agreement, Green360 has secured a capital-light pathway for market entry, with first commercial Eco-Clay sales targeted for 1H 2026. The Agreement enables the Company to build out market demand without significant capital expenditure or lead times associated with constructing a dedicated calcination facility. Minimal capital expenditure of approximately \$300k is estimated to enable Calix's facility to comply with large-scale logistics requirements.

Green360 will transport kaolin from its existing Pittong operations near Ballarat to Calix's Bacchus Marsh facility near Melbourne for calcination. The processed material will then be delivered into the established concrete supply chain where the Company has already demonstrated its capability to integrate⁴.

This Agreement is the final step in commercialising Eco-Clay with Green360 having already demonstrated:

- The ability to successfully manufacture commercial quantities of Eco-Clay (~500 tonnes)⁵;
- Successful integration with existing industry supply chain to deliver commercial quantities of Eco-Clay to a National concrete supplier⁶; and
- Independently verified by the University of Melbourne suitability as a Grade 1 pozzolan under AS3582.4:2022⁷.

Key terms of the Agreement:

- **Term:** two-year term with the option to extend for an additional two-year period at the election of Green360 subject to minimum throughputs during the initial two-year term;
- **Termination:** The Agreement may only be terminated for convenience by Green360;
- **Throughput:** Up to 30,000 tonnes p.a. capacity available to Green360;
- **Minimum commitment:** No minimum commitment of tonnes from Green360. There is no minimum monthly cost associated with the contract;
- **Fee Structure:** Cost plus margin;
- **Exclusivity:** Non-exclusive. Green360 has priority access to the Plant for the purpose of processing its ore;
- **Commencement:** The contract is binding on both parties and commences immediately. Capital improvements are required to facilitate large scale commercial deliveries with an expected lead time of approximately 8 weeks and a cost of approximately \$300k. Upon completion production may commence (subject to receipt of commercial sales agreements). The Company intends to conduct several campaigns during this period to facilitate demand for the product.

The Agreement otherwise contains terms and conditions that are considered standard for an agreement of this nature.

Calix will toll treat Kaolin delivered by Green360 with processed product received by Green360's end customers from Calix's Bacchus Marsh site. Title to feedstock and finished product remains with Green360 throughout.

Next steps

Green360 is currently in negotiations with concrete manufacturers and expects to conclude the first commercial agreement to supply Eco-Clay into the Melbourne concrete market this half. Subject to the generation of sufficient demand, Green360 intends to construct and operate a calciner at its Pittong operations to support future scale-up.

About Eco-Clay

Eco-Clay is a high-reactivity calcined kaolinite (metakaolin) material that can replace up to 40% of Portland cement in concrete, significantly reducing carbon emissions while maintaining high performance.

Eco-Clay is produced from Green360's own kaolin by-products – specifically tailings and settlement pond residues generated during the refining of high-purity kaolin. It is then calcined to a temperature of around 750 degrees Celsius where it transforms into metakaolin. The significantly lower energy intensity compared to traditional Portland cement manufacture, which requires heating of up to 1,450

degrees Celsius, enables Eco-Clay to provide a lower carbon solution to concrete manufacturing. This circular economy model transforms what was once an industrial by-product into a valuable low-carbon construction material.

About Green360 Technologies Limited

Green360 Technologies (ASX:GT3) is an Australian-based building materials company leading the development of low-cost, low-carbon cement to address an immediate demand in the market. Traditional cement production is a major industrial polluter; Green360 Technologies is using innovative methods to produce an alternative, delivering improved performance and a reduced emissions profile.

Green360 Technologies is executing a commercialisation plan alongside a reputable market leader, focused on near-term and widespread industry adoption of the Company's low-carbon cement.

FORWARD-LOOKING STATEMENTS

This release may contain certain forward-looking statements with respect to matters including but not limited to the financial condition, results of operations and business of GT3 and certain of the plans and objectives of GT3 with respect to these items.

These forward-looking statements are not historical facts but rather are based on GT3's current expectations, estimates and projections about the industry in which GT3 operates and its beliefs and assumptions.

Words such as "anticipates," "considers," "expects," "intends," "plans," "believes," "seeks," "estimates", "guidance" and similar expressions are intended to identify forward looking statements and should be considered an at-risk statement. Such statements are subject to certain risks and uncertainties, particularly those risks or uncertainties inherent in the industry in which GT3 operates.

These statements are not guarantees of future performance and are subject to known and unknown risks, uncertainties, and other factors, some of which are beyond the control of GT3, are difficult to predict and could cause actual results to differ materially from those expressed or forecasted in the forward-looking statements. Such risks include, but are not limited to resource risk, product price volatility, currency fluctuations, increased production costs and variances in product grade or recovery rates from those assumed in mining plans, as well as political and operational risks in the countries and states in which we sell our product to, and government regulation and judicial outcomes. For more detailed discussion of such risks and other factors, see the Company's Annual Reports, as well as the Company's other filings.

GT3 cautions shareholders and prospective shareholders not to place undue reliance on these forward-looking statements, which reflect the view of GT3 only as of the date of this release.

The forward-looking statements made in this announcement relate only to events as of the date on which the statements are made.

GT3 will not undertake any obligation to release publicly any revisions or updates to these forward-looking statements to reflect events, circumstances or unanticipated events occurring after the date of this announcement except as required by law or by any appropriate regulatory authority.

¹ Investors are cautioned that the throughput figure is a contractual term representing the plant capacity available to Green360 and is not a production target or other form of estimated forecast production
