TAPC Secures New A\$9M Contract

The Environmental Group Limited (ASX: EGL) (“the Company”) is pleased to announce that Total Air Pollution Control (‘TAPC’) has been awarded a major contract by Ozango Minerais S.A., a subsidiary of Pensana PLC and the owner of the Longonjo Rare Earth Refinery Project in Angola, valued at approximately A\$9 million.

The primary scope of work is the design and supply of an off-gas scrubbing system for the Project’s processing facility. The Longonjo Project is a strategically significant rare earth development that will supply critical materials used in electric vehicles, renewable energy technologies, and advanced manufacturing.

TAPC’s off-gas scrubbing system will control and treat process emissions, ensuring environmental compliance, safe and reliable plant operation, and alignment with the Project’s ESG objectives. The opportunity aligns closely with EGL Clean Air division’s core expertise in emissions control and represents a commercially attractive entry into the growing critical minerals sector.

The system is engineered to capture, neutralise, and remove process emissions generated during mineral processing. The system combines proven gas-handling design with advanced scrubbing technology to ensure compliance with stringent environmental standards while supporting safe, reliable plant operation. By effectively treating particulates and gaseous pollutants, the solution helps customers meet regulatory obligations, reduce environmental impact, and align with broader ESG objectives.

EGL CEO Jason Dixon said, “TAPC continues to build strong momentum, securing high-value, strategically aligned projects with leading global customers. This contract with Ozango Minerais reflects the confidence placed in our technical capability and reinforces the strong growth outlook for EGL’s Clean Air division. We are proud to support such an important critical minerals development.”

Work is expected to commence in April 2026, with an anticipated duration of 12 months.

This announcement has been authorised by the Board.

About EGL

The Environmental Group Limited has four business units, all committed to the protection of the environment by improving air quality, reducing carbon emissions, enhancing waste treatment, and lifting water quality.

EGL Clean Air has a range of technologies which reduce dust, odours, and harmful gasses from the environment.

EGL Baltec produces inlet and exhaust systems for gas turbines, which are used to complement and augment solar and wind energy production.

EGL Energy offers a network of service offices across Australia providing 24/7 service, maintenance and repairs of both proprietary equipment and other OEM equipment. The division also provides an essential link in our strategy to build a bio/waste to energy platform.

EGL Waste Services provides tailored waste recovery solutions, in partnership with Turmec, supplies Kadant Paal Balers for waste management solutions and continues to develop our patented technologies using foam fractionation sustainable methods for treating PFAS from Water, Soil & Biosolids, in collaboration with Victoria University.
