

Exploration Commences on St John Gold/Copper/Antimony Project in New Brunswick, Canada

Riversgold Limited (ASX: RGL, RGLO, Riversgold or the Company) is pleased to announce that our earn-in partner for our Saint John Gold/Copper/Silver/Antimony Project (the **Saint John Project**) in New Brunswick in south-eastern Canada, A.I.S Resources Limited, have advised that they plan to start a high-resolution helicopter-borne magnetic survey this week.

Canadian-listed A.I.S. Resources Limited (**AIS**) (TSXV:AIS, OTC Pink: AISSF, FRA:5YH) have engaged Geo Data Solutions GDS Inc. of Laval, Quebec to undertake this survey.

The survey will be deployed across selected polygons within the broader St John Project area and will be conducted using Geometrics G822 sensor technologies, aimed at delivering high-resolution, low-noise magnetic data across varied terrain conditions. A total of 2,125 line kilometres at a line spacing 50 metres.

The goal of the survey is to complete high-confidence magnetic anomaly mapping across the St John Project.

On 15 September 2025¹, Riversgold announced a farm-out agreement with AIS regarding its Saint John Gold/Copper/Silver/Antimony Project located in New Brunswick, south-eastern Canada. Under the agreement, AIS can earn up to 75% of the Saint John Project over a 4-year period by spending C\$4.4 million on the tenements. Riversgold will retain a 25% free-carried interest through to decision to mine.

David Lenigas, Riversgold's Chairman, commented:

"We are pleased to report that AIS are now fully engaged in advancing their exploration efforts at the St John Project. This Project offers considerable potential for numerous high-grade gold, copper, antimony, silver and rare-earth maiden discoveries across its 101 km² area. This airborne survey will be critical in refining drill targets for later this year.

"With recent surface rock chip sampling² showing encouraging results, with grades reaching up to 17.6% copper, 10.8% antimony, 70.4 g/t gold, and an impressive 1,500 g/t silver, we and AIS are very keen to see drilling underway in 2026."

The survey will commence on April 15, 2026, with interpretation of results expected shortly after completing the survey. These results will guide the next phase of exploration, including ground-based geophysics, mapping, and drill targeting.

About the Saint John Project

The Saint John Project is interpreted to be prospective for IOCG-style mineralization based on regional geology. The IOCG exploration targets provide strategic exposure to gold, silver (precious metals), copper (energy transition metal), antimony, and rhenium (critical minerals).
