

Update Regarding Cleansing Notices

SRJ Technologies Group PLC (ASX: SRJ) (SRJ or the Company) wishes to advise the market of an update relating to cleansing notices previously lodged by the Company with ASX.

The Company lodged cleansing notices with ASX stated to be made under section 708A(5)(e) of the Corporations Act 2001 (Cth) (Act) on 25 February 2026 and 29 December 2025 respectively (together, the Cleansing Notices) in connection with the issue of securities by the Company for payments regarding consultants' services and to employees and in respect of the conversion of options.

The Company wishes to clarify that the issue of the cleansing notices was an administrative oversight as the Company was not entitled to rely on the disclosure exemption in section 708A(5) of the Act at the time the Cleansing Notices were issued due to its previous suspension from trading in July 2025.

However, following further review, the Company does not consider there to have been any impact to investors as 8,144,023 of the 17,454,023 CDIs referred to in the Cleansing Notices were issued under the Company's Employee Share Scheme (ESS) in accordance with Part 7.12 of the Act and therefore benefit from the on sale exemption under section 1100ZD of the Act, as modified by the ASIC Corporations (Employee Share Schemes) Instrument 2022/1021.

The only securities issued outside the Company's ESS that are the subject of the Cleansing Notices were issued to a director of the Company in consideration for services rendered and to the Company Secretary respectively.

Neither recipient has sold any of the securities issued to them. Both recipients have agreed to voluntarily escrow their respective securities until the earlier of the Company issuing a resale prospectus compliant with Part 6D.2 of the Act or the expiry of 12 months from the date of issue of the relevant securities. Accordingly, those securities are not currently able to be traded on ASX and the administrative oversight in relation to the Cleansing Notices does not give rise to any trading concerns.

Summary

The Company considers this matter to be administrative in nature and does not consider that any corrective action is required beyond the lodgement of this announcement.

– Ends –

This announcement has been authorised for release by the Board.

ABOUT SRJ TECHNOLOGIES

SRJ deliver integrated asset integrity maintenance, engineering and technology-enabled services to the energy, industrial and maritime industries. Asset integrity maintenance involves the provision of embedded site-based maintenance, advanced inspection, predictive monitoring and repair solutions designed to prevent asset failures and extend asset life. The services are focused on maintaining and assuring the integrity of critical mechanical and pressure containment systems, supporting safe, reliable and compliant operations across operating facilities. SRJ's asset integrity and maintenance services support asset owners in the development, implementation and execution of long-term lifecycle integrity strategies, including regulatory compliance requirements applicable to critical mechanical and pressure containment systems.

Remote inspection services are provided utilising advanced robotics and custom technologies. SRJ's range of containment management solutions enable customers to assure the integrity of new and ageing assets subject to ever more demanding regulatory pressures.

By providing advanced robotic systems, ACE (an SRJ Group company) is revolutionising asset inspection in terms of minimising human risk and providing accurate and repeatable inspection data. ACE can inspect the previously un-inspectable, delivering asset integrity assurance and management to the Energy and Marine industries. ACE has achieved accreditation with all the major Marine Class Societies.

SRJ's range of asset integrity products and solutions have gained industry approval across the energy sector and are now in use across the world. SRJ's products are designed to maintain and assure the integrity of pressure containment systems and therefore play an important role in the overall integrity of operating facilities.
