

ASX ANNOUNCEMENT

20 APRIL 2026

COMMENCEMENT OF COMMERCIAL PRODUCTION OF ECO-CLAY

- **First commercial production of Eco-Clay completed under the previously announced Toll Treatment Agreement¹ with Calix Limited (ASX: CXL)**
- **150 tonnes of Eco-Clay has been produced in this production run for anticipated first commercial sales and ongoing field validation with multiple industry participants**
- **Over 600 tonnes of Eco-Clay has now been produced to date for delivery to concrete suppliers in Victoria for customer-led commercial scale field validation in major infrastructure projects**
- **Green360 expects to conclude negotiations on the first commercial supply agreement of Eco-Clay this quarter**

Green360 Technologies Limited (ASX:GT3) (Green360 or the Company) is pleased to announce the completion of the first commercial production of Eco-Clay to support the previously announced Binding Toll Treatment Agreement² (Agreement) with Calix Limited.

As reported last month, Green360 entered into the Agreement with Calix Limited (ASX:CXL) to manufacture commercial quantities of Green360's low carbon cement replacement product Eco-Clay. Under the Agreement, up to 30,000 tonnes p.a. of Calix's plant capacity has been made available to Green360 to produce Eco-Clay.

150 tonnes of Eco-Clay was produced under the toll treatment arrangement in a single continuous production run. The Company continues to identify efficiencies in the production of Eco-Clay under this toll treating arrangement.

The Company has now manufactured over 600 tonnes of Eco-Clay to date which has been distributed to industry participants for customer-led commercial scale field validation in major infrastructure projects.

The Company expects to commercialise Eco-Clay in Victoria in 1H 2026.

Executive Chairman Aaron Banks commented:

"This production represents an important milestone in the commercialisation of Eco-Clay with the successful completion of the first continuous production run completed over multiple days. Ongoing

identification of efficiencies at increased scale provides confidence in the product's commercial viability.

We remain on track to commercialise Eco-Clay in Victoria in 1H 2026 and look forward to updating the market in due course"

About Eco-Clay

Eco-Clay is a high-reactivity calcined kaolinite (metakaolin) material that can replace up to 40% of Portland cement in concrete, significantly reducing carbon emissions while maintaining high performance.

Eco-Clay is produced from Green360's own kaolin by-products – specifically tailings and settlement pond residues generated during the refining of high-purity kaolin. It is then calcined to a temperature of around 750 degrees Celsius where it transforms into metakaolin. The significantly lower energy intensity compared to traditional Portland cement manufacture, which requires heating of up to 1,450 degrees Celsius, enables Eco-Clay to provide a lower carbon solution to concrete manufacturing. This circular economy model transforms what was once an industrial by-product into a valuable low-carbon construction material.

Approved for release by the Board

About Green360 Technologies Limited

Green360 Technologies (ASX:GT3) is an Australian-based building materials company leading the development of low-cost, low-carbon cement to address an immediate demand in the market. Traditional cement production is a major industrial polluter; Green360 Technologies is using innovative methods to produce an alternative, delivering improved performance and a reduced emissions profile.

Green360 Technologies is executing a commercialisation plan alongside a reputable market leader, focused on near-term and widespread industry adoption of the Company's low-carbon cement.

FORWARD-LOOKING STATEMENTS

This release may contain certain forward-looking statements with respect to matters including but not limited to the financial condition, results of operations and business of GT3 and certain of the plans and objectives of GT3 with respect to these items.

These forward-looking statements are not historical facts but rather are based on GT3's current expectations, estimates and projections about the industry in which GT3 operates and its beliefs and assumptions.

Words such as "anticipates," "considers," "expects," "intends," "plans," "believes," "seeks," "estimates", "guidance" and similar expressions are intended to identify forward looking statements and should be considered an at-risk statement. Such statements are subject to certain risks and uncertainties, particularly those risks or uncertainties inherent in the industry in which GT3 operates.

These statements are not guarantees of future performance and are subject to known and unknown risks, uncertainties, and other factors, some of which are beyond the control of GT3, are difficult to predict and could cause actual results to differ materially from those expressed

or forecasted in the forward-looking statements. Such risks include, but are not limited to resource risk, product price volatility, currency fluctuations, increased production costs and variances in product grade or recovery rates from those assumed in mining plans, as well as political and operational risks in the countries and states in which we sell our product to, and government regulation and judicial outcomes. For more detailed discussion of such risks and other factors, see the Company's Annual Reports, as well as the Company's other filings.

GT3 cautions shareholders and prospective shareholders not to place undue reliance on these forward-looking statements, which reflect the view of GT3 only as of the date of this release.

The forward-looking statements made in this announcement relate only to events as of the date on which the statements are made.

GT3 will not undertake any obligation to release publicly any revisions or updates to these forward-looking statements to reflect events, circumstances or unanticipated events occurring after the date of this announcement except as required by law or by any appropriate regulatory authority.
