# IMPORTANCE OF GEOGRAPHY

## OMANI EMPIRE

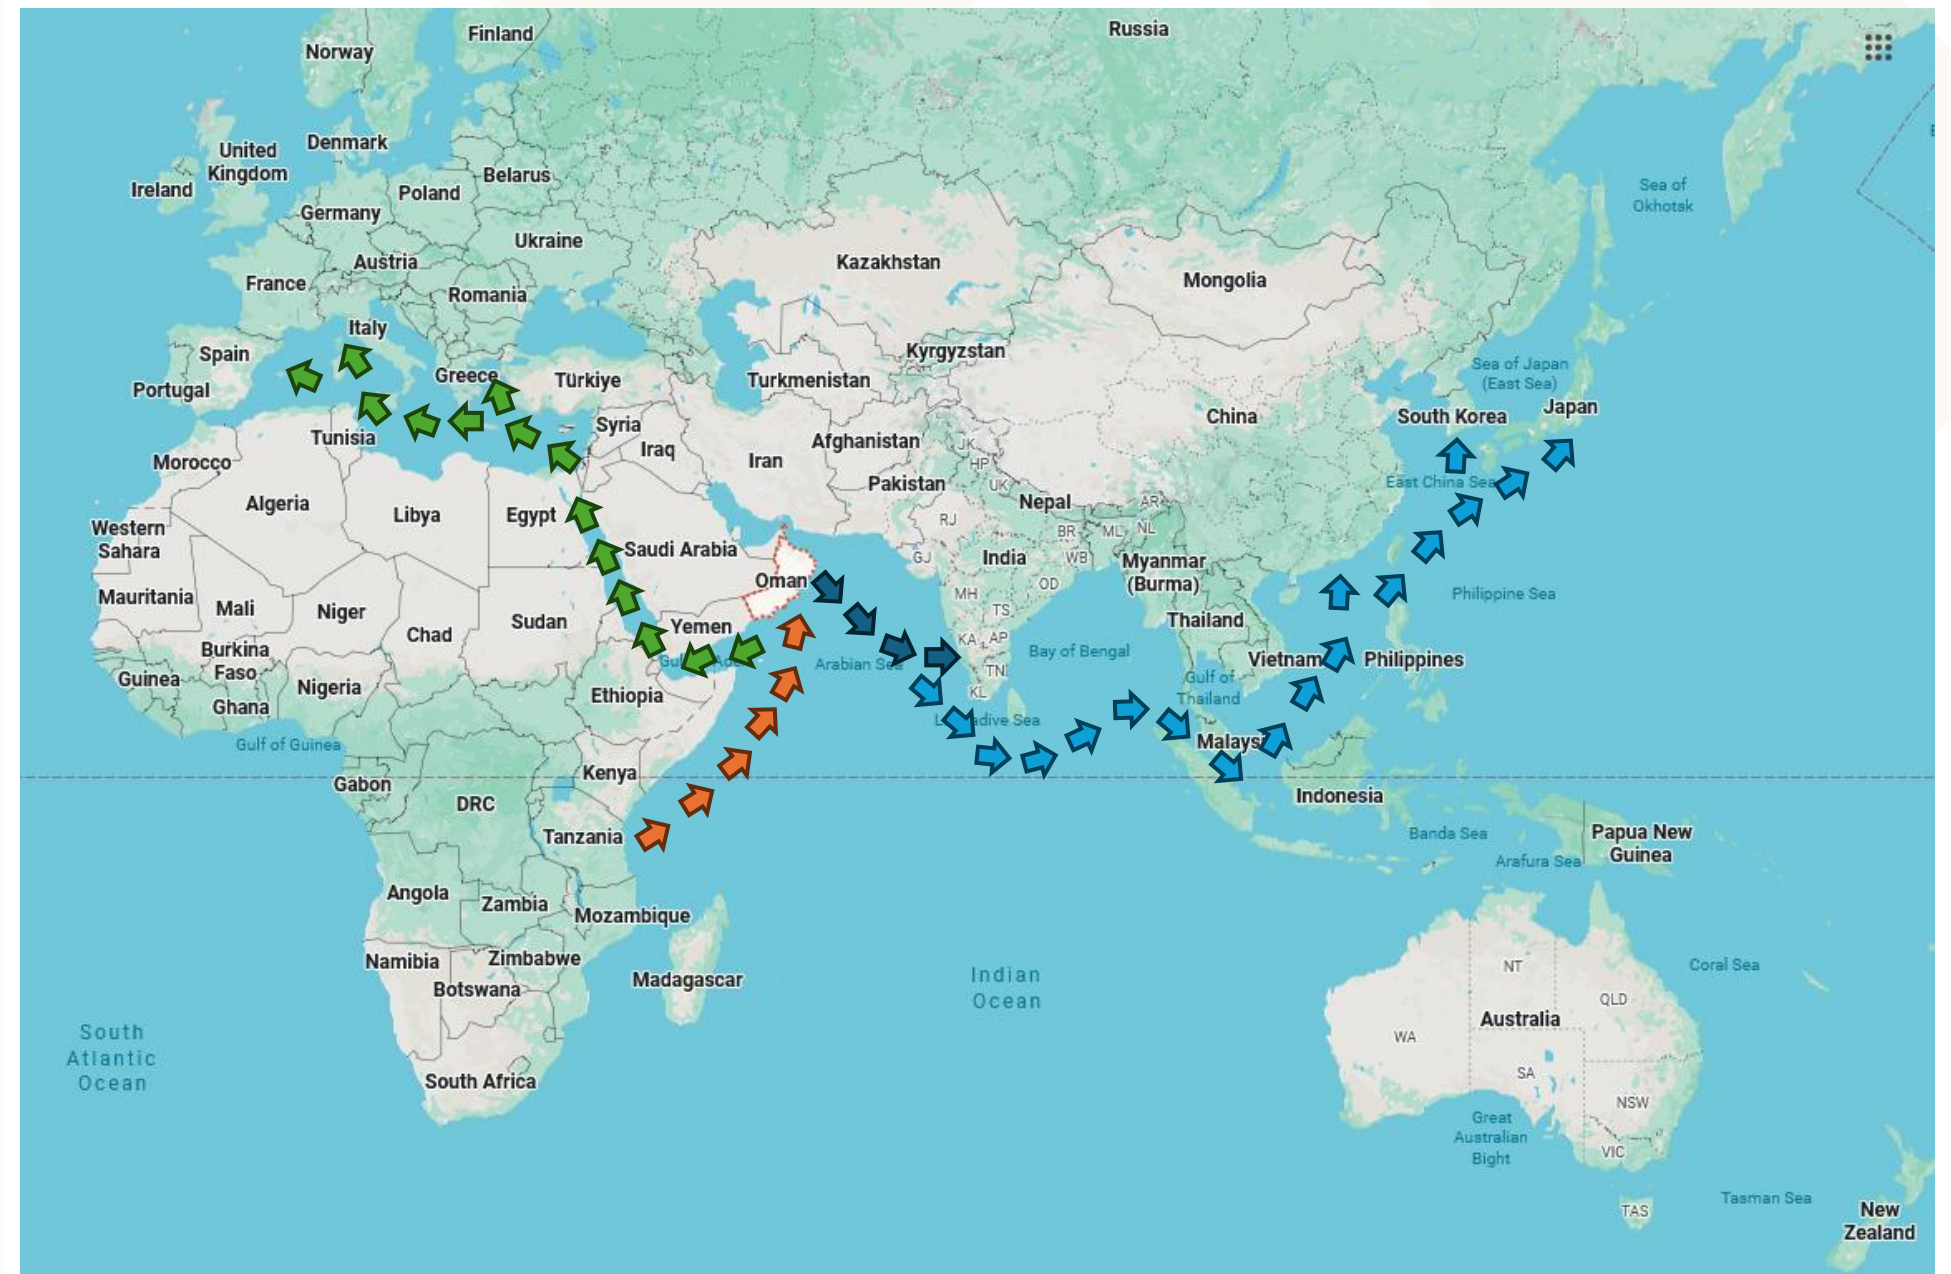

A maritime empire vying with Portugal and Britain for trade and influence in the Arabian Sea, Indian Ocean and Persian Gulf in 18<sup>th</sup> & 19<sup>th</sup> Centuries

### OMAN AND ZANZIBAR

- Oman held significant influence in trade as a regional power in the 18<sup>th</sup> century in both the Gulf area (Oman) and the African trade route (Zanzibar/Tanzania).
- Labour, Spices, Ivory, Gold from Africa made Oman a renowned trading centre, which the Portuguese and British sought control.

### In 2026

- Geography of the Strait of Hormuz still of utmost importance
- Oman largely unaffected by regional instability
- Strength in energy feedstocks and derivatives
- Economic diversification priorities: mining, agriculture, fishing and tourism
- Geology holds abundant untapped mineral wealth including: Copper, Gold, Chromite, Limestone, Gypsum, Marble, Iron Ore, Salt
- 'Geological map yet to be written' by astute and responsible resource development companies (viz. Semail Ophiolites)
- Open for business in line with Vision 2040 strategies

# IMPORTANCE OF MINING

## OMAN GROWING MINERAL ECONOMY

Recognised dependence on the hydrocarbon sector led to adoption of economic diversification strategies (VISION 2040)

### In 2016

- Oman's nominal GDP decreased by 5.1%
  - Hydrocarbon sector accounted for 68.2% of Government revenues
  - Oman's crude petroleum price decreased by 28.9% to \$40.14/bbl compared to \$56.45/bbl in 2015
  - Industrial revenue (other than petroleum related) accounted for 20.1% of nominal GDP consisting of:
    - Construction 8.9%
    - Manufacturing 8.5%
    - Electricity/Water Supply 2.2%
    - Mining & Quarrying 0.5%

# COPPER MARKET: DEMAND RISING

According to the International Association of Copper (IAC), there is presently 870 Million tonnes of copper reserves, yet we collectively consume 28 Million tonnes annually. Notwithstanding future demand growth and recycling, this represents approximately 34-40 years of known reserves!

<https://internationalcopper.org/sustainable-copper/about-copper/cu-demand-long-term-availability/>

## Rising Copper Demand

- Electrification and renewable energy systems significantly increase copper consumption.
- Electric vehicles and grid expansion are accelerating long-term demand growth.
- Emerging market urbanisation continues to drive copper usage in infrastructure and construction.
- Energy transition technologies require substantially higher copper intensity.

<https://www.globenewswire.com/news-release/2025/10/15/3166865/0/en/Copper-demand-set-to-surge-24-by-2035-as-four-key-disruptors-reshape-global-markets.html>

# COPPER MARKET: SUPPLY CONSTRAINT

According to [Shanghai Metals Market \(SMM\)](#), the production of copper by **the world's top 20 mining companies** in the fourth quarter of 2025 amounted to 3,526,000 tons, which is 2.1% more in quarterly terms, **but 10.5% less year-on-year.**

## Reduced Copper Supply

- Grasberg (Freeport McMoRan) incident in September 2025, led to a drop by 29.8% on the previous quarter, and over 38.5% as an annualised loss.
- Quellaveco and Collahuasi (Anglo American) suffering lower head grades leading to a decrease of 7.6% on the previous quarter and over 14% in annualised terms.
- Global Copper grades declining, especially in Chile where some of the largest producing companies operate
- Refining T&C's challenging for refined output profitability

# COPPER MARKET: GAPS EMERGING

According to the S&P Global report (2022/2026 Analysis), the copper market in 2035 could see a deficit of up to about 1.5 million Mt in the 'High-Ambition' supply scenario and up to a 9.9 million Mt deficit in the 'Rocky-Road' supply scenario.

## Rising Copper Demand

- Electrification, renewable energy systems significantly increase copper consumption.
- Electric vehicles (EVs), grid expansion are accelerating long-term demand growth.
- Emerging market urbanisation continues to drive copper demand in infrastructure and construction.
- Energy transition technologies require substantially higher copper intensity.

Global Average Copper Ore Head Grades %

## Declining Copper Grades

- Average ore grades across many mature copper mines steadily declining.
- Lower grades require larger volumes of ore to maintain production levels.
- Declining grades increase operating costs and processing requirements.
- Depletion of higher-grade deposits becoming prevalent in established mining regions.

## Constraints on New Copper Supply Pipeline

- Development of new copper mines is slowed by complex permitting and regulatory timelines.
- Rising capital intensity is limiting the pace of large-scale project development.
- Investment in greenfield exploration has remained relatively subdued.
- Long development timelines delay the introduction of new supply.

# COPPER MARKET: OUTLOOK

- Declining grades further compounding profitability in many of the larger operations such as Chilean copper producing assets meaning metal throughput declines and cash costs headwinds.

- Copper market pricing undergoing structural and global instability change
