

Building a Critical Minerals Platform

Rare Earths + Yttrium | Tungsten | Tin | Gallium

Flagship rare earth platform with strategic exposure to defence and technology metals

Disclaimer

This Presentation (Presentation) has been prepared by Critica Limited (CRI or the Company) and is authorised by the Board of CRI. The information contained in this Presentation is a professional opinion only. Certain information in this Presentation has been derived from third parties and though CRI has no reason to believe that it is not accurate, reliable or complete, it has not been independently audited or verified by CRI.

This Presentation contains general and background information about CRI's current activities as at the date of this Presentation and should not be considered to be comprehensive or to comprise of all the information that an investor should consider when making an investment decision. CRI is not responsible for providing updated information and assumes no responsibility to do so. Recipients should conduct their own investigations and perform their own analysis of the information, statements and opinions contained and this Presentation should be read in conjunction with CRI's other periodic and continuous disclosure announcements lodged with the ASX.

This Presentation is for information purposes only. Neither this nor the information contained in it constitutes an offer, invitation, solicitation or recommendation in relation to the purchase or sale of CRI shares in any jurisdiction. This Presentation is not investment advice or a recommendation to acquire CRI securities and has been prepared without taking into account the recipient's investment objectives, financial circumstances or particular needs. Recipients should seek professional advice before deciding if an investment is appropriate.

All securities transactions involve risks, which include (among others) the risk of adverse or unanticipated market, financial or political developments.

To the fullest extent permitted by law, CRI, its officers, employees, related bodies corporate, agents and advisers expressly disclaim, to the maximum extent permitted by law, all liabilities (however caused, including negligence) in respect of, make no representations regarding, and take no responsibility for, any part of this Presentation and make no representation or warranty as to the currency, accuracy, reliability or completeness of any information, statements, opinions, conclusions or representations contained in this Presentation. No responsibility for any errors or omissions from this arising out of negligence or otherwise is accepted.

Any forward-looking statements and forward-looking information included in this Presentation involve subjective judgment and analysis and are subject to uncertainties, risks and contingencies, many of which are outside the control of, and may be unknown to, CRI. In particular, they speak only as of the date of this Presentation, they assume the success of CRI's strategies, and they are subject to significant regulatory, business, competitive and economic uncertainties and risks. Actual future events may vary materially from the forward-looking statements and forward-looking information and the assumptions on which they are based. Recipients of this Presentation are cautioned to not place undue reliance on such forward-looking statements and forward-looking information.

Basis of Preparation

CRI has not completed a Scoping or Feasibility Study. References to development pathways are aspirational and do not imply economic viability. Inferred Mineral Resources are insufficient to support Ore Reserves and cannot underpin production targets or forecasts. Metallurgical results are preliminary testwork on selected samples; applicability across the deposit and at scale remains to be demonstrated. Future studies, permits and funding (including equity) may be required before any development decision.

Competent Persons Statement

The information in this report that relates to exploration results including geology interpretation, data preparation and data quality is based on work compiled by Dr. Stuart Owen who is a Member of the Australian Institute of Geoscientists. Dr. Owen is a permanent employee of Critica Limited and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC code). Dr. Owen consents to the inclusion in the report of the matters based on his information in the form and context in which they appear.

This Presentation refers to Critica's mineral resource estimate at the Jupiter Project. The information in this Presentation that relates to that mineral resource estimate has been extracted from Critica's previous ASX announcement entitled Jupiter Maiden Resource – Australia's Largest Clay Hosted which Critica announced to the ASX on 11 February 2025 and 13 August 2025 Jupiter Confirmed as Australia's Largest MREO Clay Resource. A copy of the announcements are available at www.asx.com.au (ASXCRI) or at www.critica.limited.

Critica confirms that it is not aware of any new information or data that materially affects the information included in that announcement and, in relation to the estimate of the mineral resource, confirms that all material assumptions and technical parameters underpinning the estimate in that announcement continue to apply and have not materially changed. The Competent Person in relation to the mineral resource estimate in that announcement was Rodney Brown. Critica confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from that announcement.

The Information in this presentation relates to previous exploration results extracted from the following ASX announcements:

- 14 April 2026- Jupiter Pilot Plant Recovery Improves to 81% MagREO
- 16 February 2026 – Critica Produces First MREC from Jupiter at ANSTO
- 2 December 2025 – Second High-Grade MREP Shows Strong Magnet REE & Y Grades
- 17 November 2025 – Critica's MREP Flowsheet Achieves 63% Gallium Leach Recovery
- 28 October 2025 – Jupiter Delivers First High Grade 84% TREO MREP
- 29 September 2025 – Consistent Bulk Sample Results Strengthen Jupiter Pathway
- 1 September 2025 - Critica to produce high-grade REE concentrate at pilot plant
- 26 August 2025 - ANSTO & Minutec engaged to produce first MREC from Jupiter
- 13 August 2025 – Jupiter Confirmed as Australia's Largest MREO Clay Resource
- 16 July 2025 – Critica Advances Jupiter – Outstanding Magnet and HREO Grades
- 28 May 2025 – Critica Commences Bulk Metallurgical Testwork
- 5 May 2025 – Drilling Targets Restricted Heavy REE at Satellite Prospects
- 11 February 2025 – Jupiter Maiden Resource – Australia' Largest Clay Hosted
- 23 January 2025 – First Pass Metallurgical Testwork Delivers 830% REE Upgrade

Authorised by the Board of Critica Limited

Critical Mineral Supply Chains Are Now Strategic Assets

China Dominance¹

~98%	Gallium supply
~85%+	Rare earth processing
~80%+	Tungsten & downstream
~35%+	Refined tin supply

Market Shift

- Export restrictions (Nov 2025) tightening control
- Controls extending beyond REEs into technology metals
- Supply chains now driven by policy, not price

Urgency is Real²

- Governments and OEMs moving upstream
- Defence supply chains targeting non-China sourcing by ~2027

What This Means

Western supply chains must be built, not sourced. Critica is positioned across rare earths and critical minerals to support non-China supply chain

"The issue is not access - it is custody of supply"

Critical Minerals Power Strategic End Markets

Critical Minerals Enter Structural Price Re-Rating Phase

Rare Earths (NdPr)

- ~2x increase (2025 to 2026)
- Policy support + tightening supply
- Demand remains price-inelastic

Tungsten (WO₃)

- ~5x rebound from 2023 to 2024 lows
- Export controls + defence demand
- Structural supply constraint emerging

Tin (Sn)

- ~2.5–3x from 2022-2023 lows
- Supply disruption (Myanmar/Indonesia)
- AI & data-center demand accelerating

Critica: A Multi-Asset Minerals Platform

Tier-1 jurisdictions Scale + strategic optionality

Jupiter Rare Earth Project Western Australia

- Australia's largest clay hosted REE resource (~1.8Bt)¹
- Magnet + heavy REE's (Nd,Pr, Dy, Tb) + Yttrium
- Gallium & scandium co-products
- Scale, Simplicity and Speed to product

Mt Lindsay Strategic Optionality Tasmania

Strategic Optionality

- One of the largest undeveloped tin-tungsten systems
- ~81 kt tin & ~3.2Mt mtu WO₃ - (~32kt tungsten)²
- Defence, semiconductors & advanced manufacturing exposure
- Multiple development pathways under review

Aligned to Western defence, AI and electrification supply chain

critica.limited

ASX: CRI

April 2026

1. Refer to Jupiter resource announcements dated 11 Feb, 13 Aug, 10&28 Oct and 2 Dec 2025
 2. Combined resource - Measured, Indicated & Inferred - Refer to ASX release 17 October 2012.

Why Jupiter Wins

TIER 1 WA LOCATION
Proven Mining Jurisdiction

A Rare Earth Project Defined by Scale, Simplicity and Speed

Scale

- ~**1.8Bt** resource
- Australia's largest clay-hosted REE system¹
- Magnet + heavy REE exposure (NdPr, Dy, Tb)

Simplicity

- Clay-hosted — no drilling/blasting
- ~**95%+ mass rejection**
- Lower-cost processing pathway

Speed

- 23 months: discovery to commercial-grade product
- **MREO (86% TREO)**
- **MREC (58% TREO)**

Strategic Relevance

- Gallium (~70kt, ~63% extraction)
- Yttrium (~2.4% in product; >30,000% upgrade)
- Aligned West supply chains

1.8Bt

Global Resource
~TREO 1,700ppm

~95%

Mass Reduction

>800%

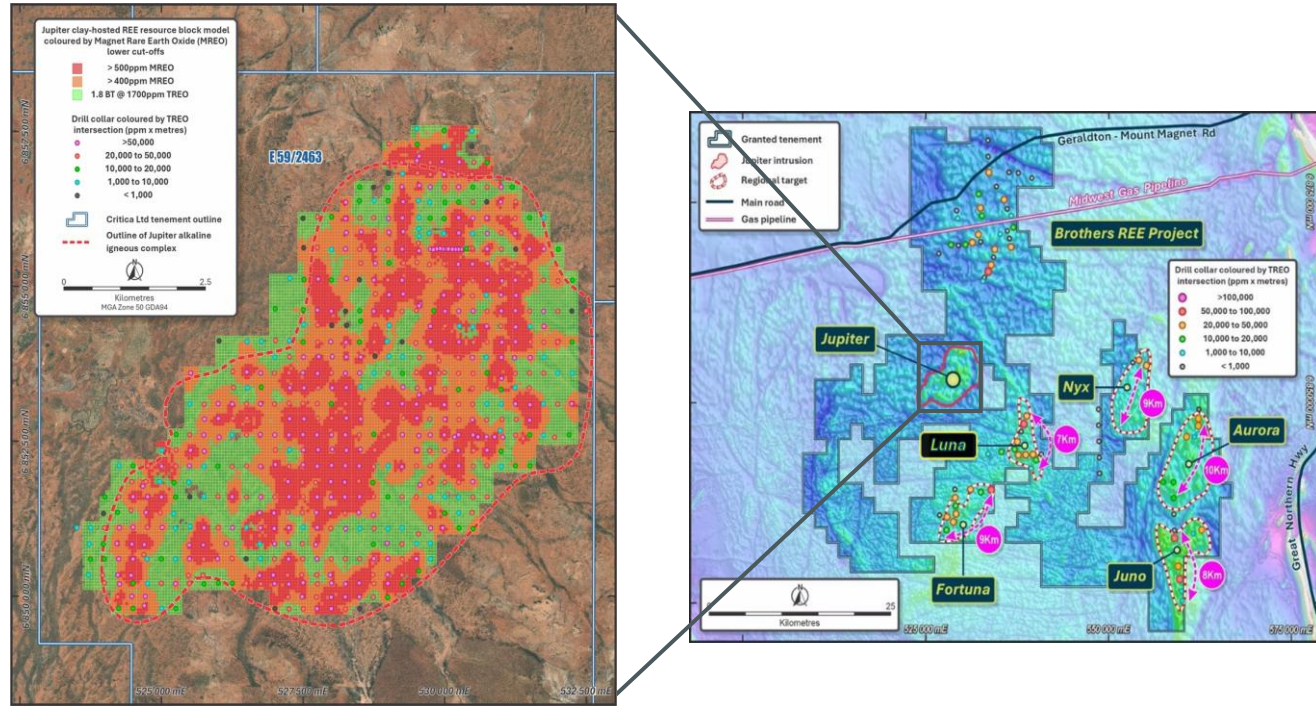

Grade Uplift

MREC

Commercial-grade product

A large-scale, low-cost REE system with demonstrated metallurgy

Jupiter's Scale and Geology

Jupiter ~1.8 Bt Resource Australia's Largest Clay-Hosted Rare Earth System

- ✓ **Scale & Definition:** Over 30,000m drilled
- ✓ **Mineralisation:** Near surface, homogeneous across 40km²
- ✓ **Magnet plus heavy REE rich:**
Nd, Pr, Tb & Dy = 23% of TREO

- Other Critical minerals:**
- ✓ Yttrium
 - ✓ Gallium contained 70kt
 - ✓ Premium Fe concentrate by-product

- ✓ **Clean basket:** Low Uranium & Thorium

Jupiter currently represents <3% of Critica's Brothers Project landholding

Illustrative only. Jupiter resource is Inferred (ASX: 11 Feb & 13 Aug 2025) and not directly comparable to peers with Indicated/Measured resources or advanced studies. Refer to Appendix C for source data for peer comparisons. Source: . Jupiter resource is Inferred (ASX: 11 Feb & 13 Aug 2025) , Second High-Grade MREP Shows Strong Magnet REE & Y Grades (ASX 2 Dec 2025)

Designed for Simplicity, Cost and Permitting Advantage

Simpler Mining

- Flat, near-surface deposit
 - Low strip ratio
 - Clay hosted - no drilling/blasting required
- Lower mining cost & operational complexity**

Reduced Processing Intensity

- ~95% mass rejection before leaching
 - Beneficiation-first flowsheet
 - Lower reagent, water and energy intensity
 - Low U/Th
- Lower capital & operating cost**

Infrastructure-Rich Location

- Highway through lease
 - Two gas pipelines crossing lease
 - Power lines nearby
 - Rail access within region
- Limited new infrastructure required**

Permitting & Sustainability Advantage

- Proven mining jurisdiction (WA)
 - Flat terrain, Pastoral lease
 - Native title extinguished
 - Lower environmental intensity vs conventional REE processing
- Simpler permitting pathway**

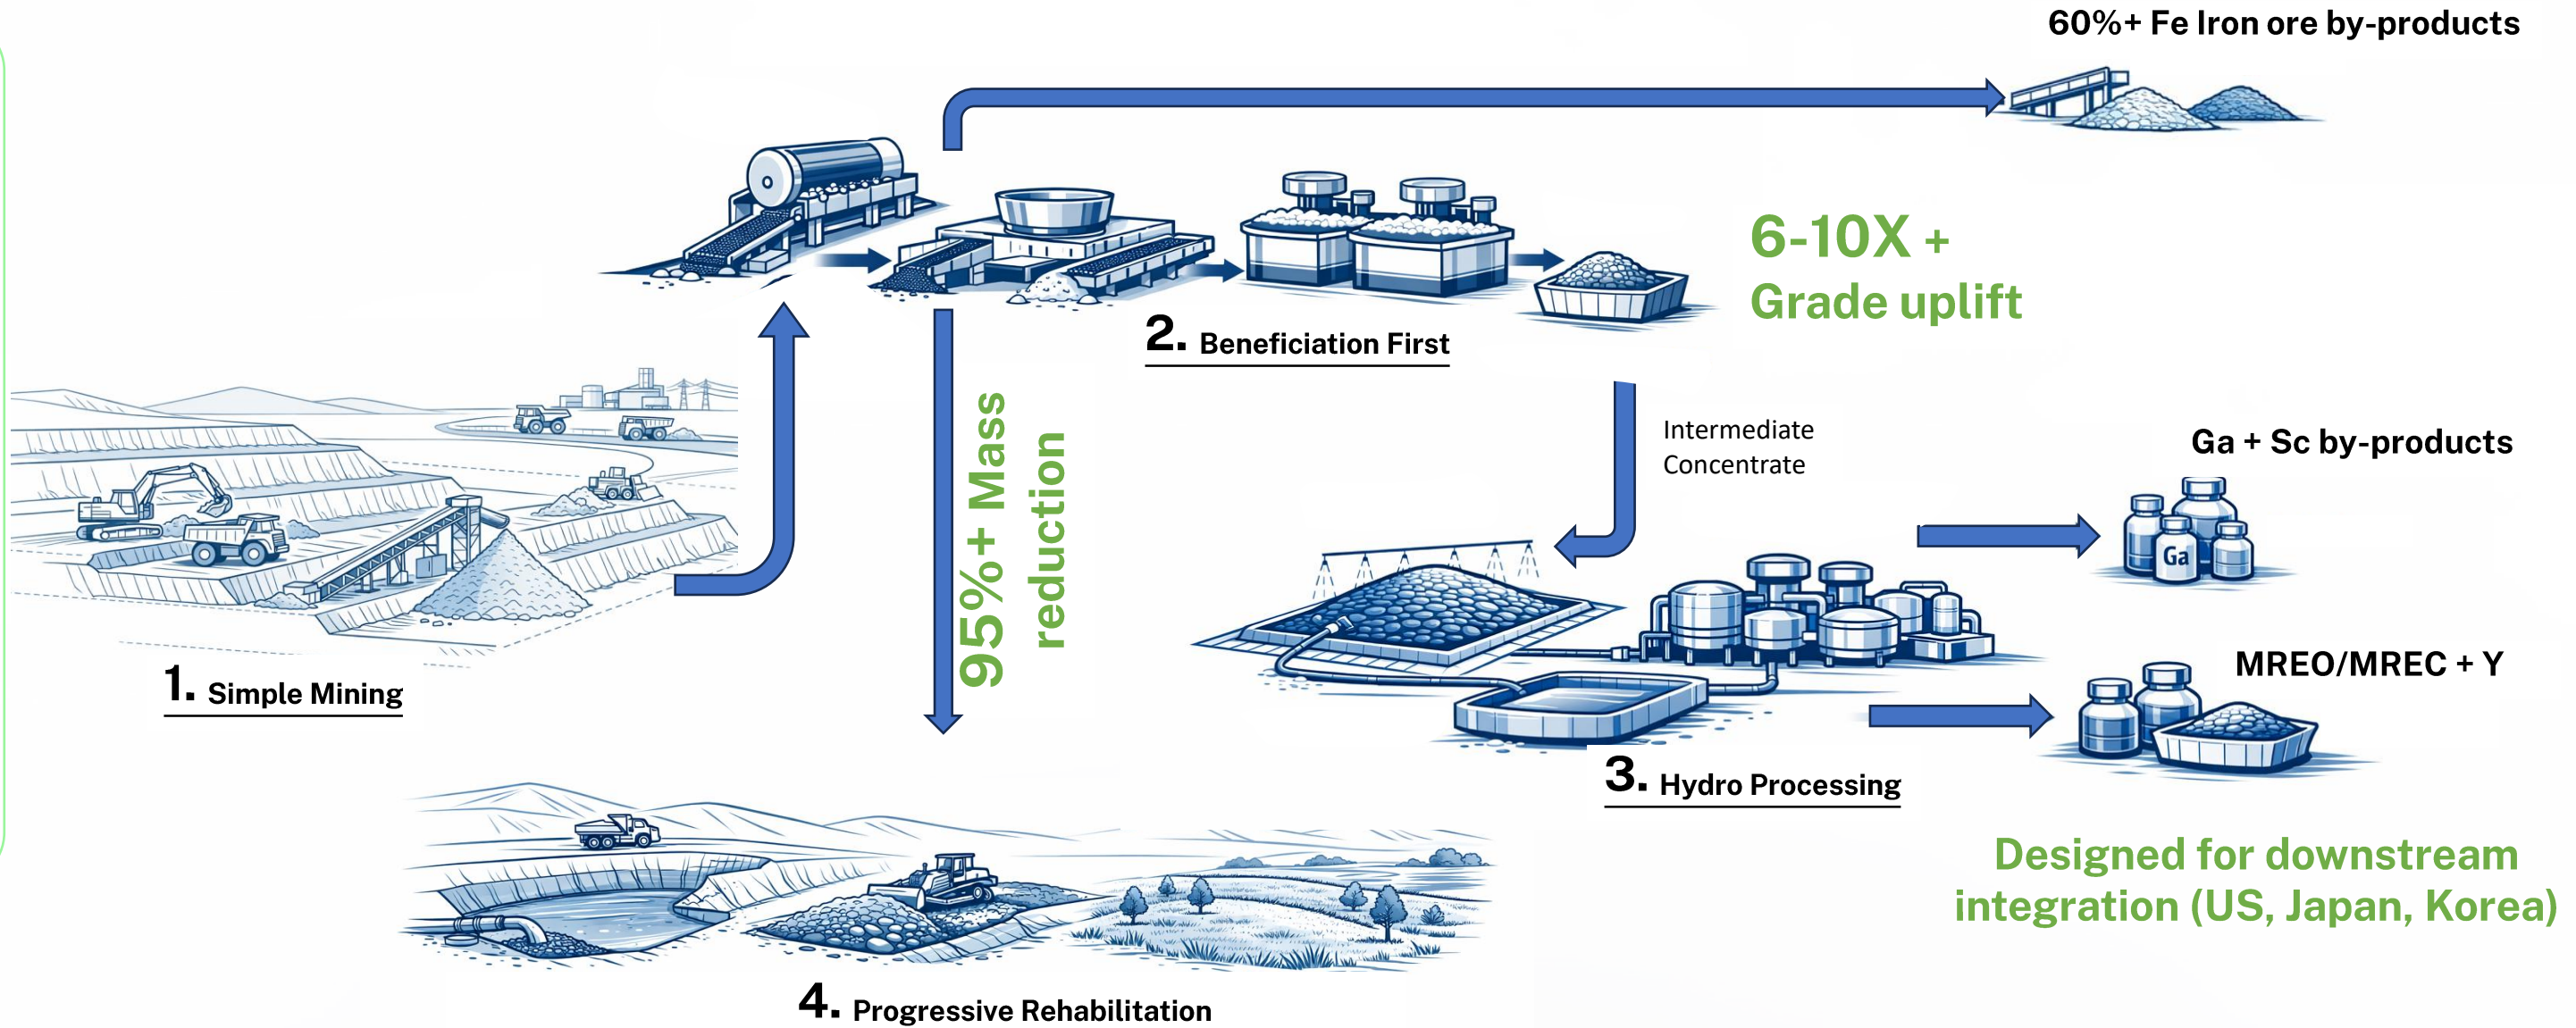

Jupiter Tier 1 WA Location – infrastructure rich

These are aspirational statements and are not intended to be forecasts, as the Company does not yet have reasonable grounds to expect that the matters on this slide will be achieved

Simple Processing, Multiple Revenue Streams

Upgrade early - process less - unlock multiple products

April 2026

Scoping Study Underway

First integrated assessment of mining, processing and economics

Credible Execution

- Sedgman appointed as Lead Engineer
- Industry-recognised EPC with critical minerals experience

Integrated Study Scope

- Mining, beneficiation and processing integrated
- Resource update underway
- Metallurgical optimization ongoing

What This Delivers

- First independent view of project economics
- Defines base-case development pathway
- Supports partner, offtake and funding discussions

Mt Lindsay: Strategic Tin & Tungsten

Leverage to defence, semiconductors and critical mineral supply chains

World-Class Tin–Tungsten Province
>\$12bn historical production

1. Strategic Exposure

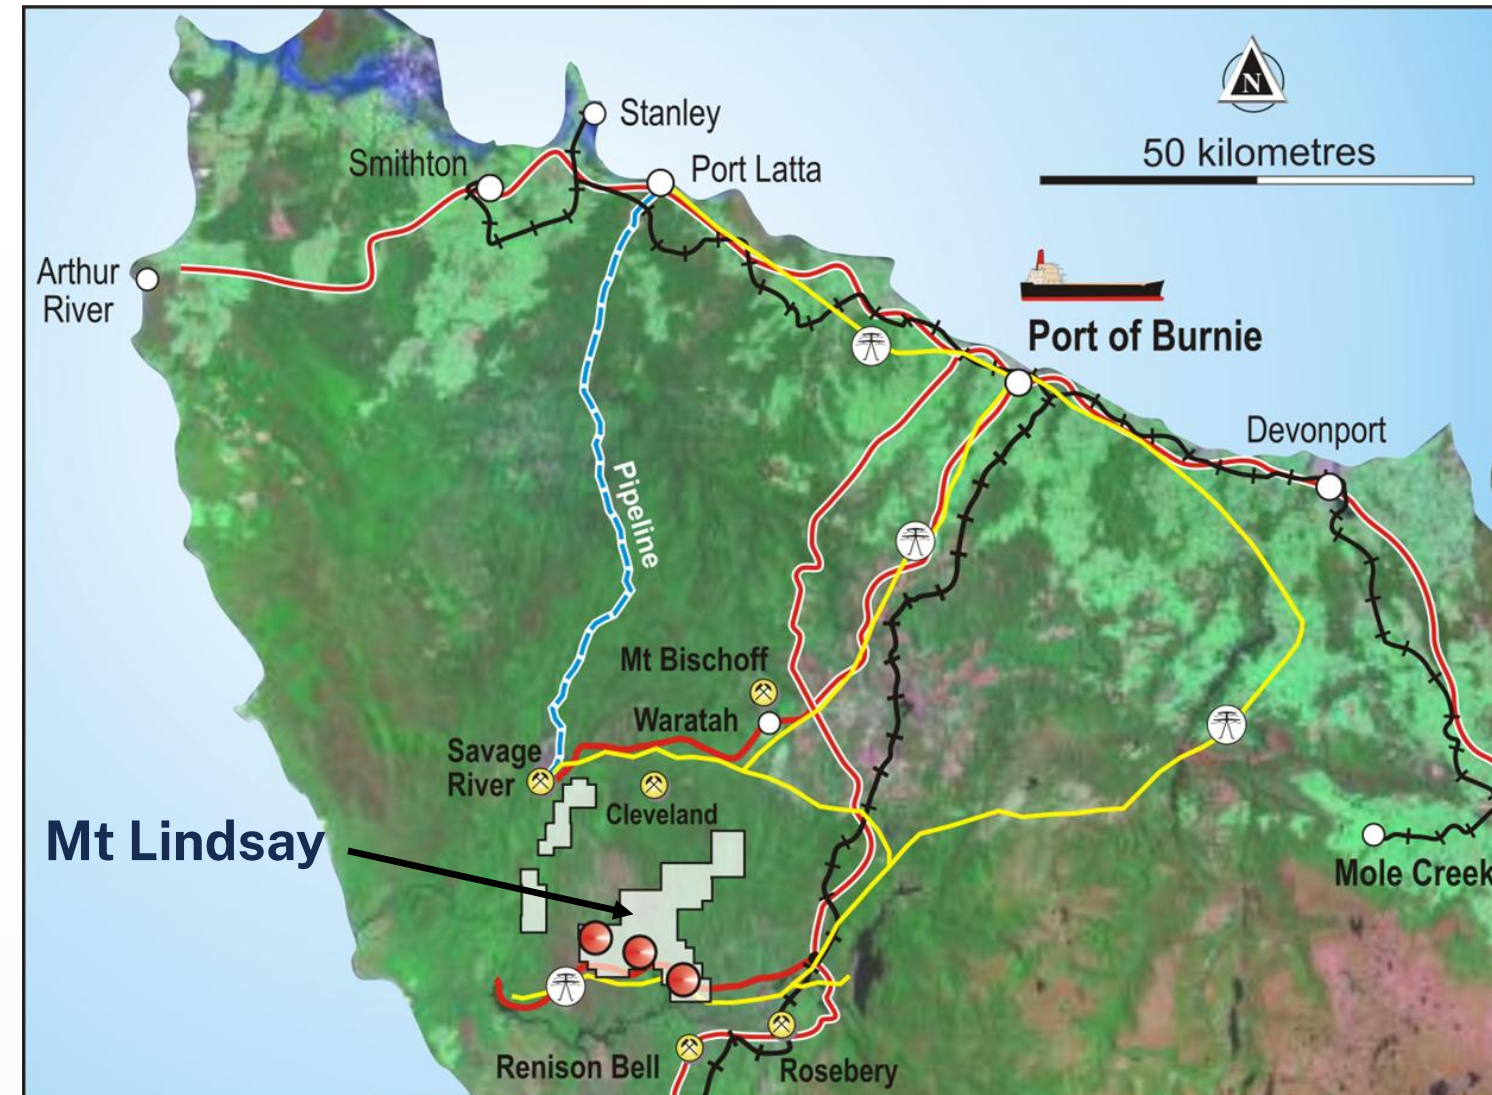

- **Tin** - semiconductors, electronics, AI infrastructure
- **Tungsten** - defence, advanced manufacturing
- Structural supply constraints emerging¹
- Policy-driven demand dynamics

2. Asset Positioning

- One of the largest undeveloped tin–tungsten projects
- Two magnetic rich skarn systems)
- 83,000m diamond drilled completed
- Resource:
 - **81kt tin**
 - **3.2Mt mtu WO₃ (~32kt tungsten)**
- Open at depth

3. Development Pathway

- Strategic review underway
- Partnership and offtake discussions progressing
- Development pathway being defined

Near-Term Milestones

Progression Jupiter through disciplined technical and commercial execution

Next Steps

- Offtake & strategic partner engagement
- Progression to Prefeasibility Study (PFS) Demonstration Plant
- Mt Lindsay strategic refresh

- Achieved
- Active
- Next steps

Experienced Operators, Not Just Developers

Proven Track Record in Critical Minerals Project Delivery

Jacob Deysel – CEO

25+ years in global mining and critical minerals
Experience from Goldfields – Rio Tinto - Kenmare - UEC
Discovery – development – operating exposure

Jamie Byrde – CFO

20+ years in ASX-listed companies
Strong focus on capital discipline, governance and funding

Dr. Stuart Owen – Exploration Manager

25+ years global exploration experience
Led discovery of Paulsens gold and Jupiter REE

Dr. Natalee Bonnici Senior Exploration Geologist

15+ years in geology and geometallurgy
Part of team that discovered Triumph VHMS; resource delivery at Northern Star

Dr. Thi Thu Hien Dinh - Chief Metallurgist

23+ years in rare earths and battery metals
Led REE, lithium and nickel processing teams

Tim Lindley - Non-Executive Chairman

25+ years in global investment banking
Experience across equity raising, project finance and M&A

Nick Cernotta - Non-Executive Director

40+ years global mining leadership
Experience with Fortescue, Barrick, Macmahon

A team combining discovery, metallurgy, development and capital markets expertise — aligned to deliver

- Proven track record in critical minerals project delivery
- Experience from exploration through to production
- Board and management aligned on disciplined execution
- Deep WA industry, OEM and investor relationships

Management

Board

Why Own Critica Now?

Not a single-asset story — a scalable critical minerals platform

1. Tier-1 critical minerals platform

- Rare earths (Jupiter ~1.8Bt resource)
- Tin & tungsten (Mt Lindsay)
- Gallium & scandium co-products
- Exposure across multiple strategic commodities

2. Demonstrated and scalable processing platform

- Beneficiation-first flowsheet validated (mass rejection + product achieved)
- Multiple product pathways (MREO, MREC, by-products)
- Applicable across broader mineral system

3. Defined pathway across multiple assets

- Jupiter: Scoping Study - PFS pathway
- Mt Lindsay: strategic review + development optionality
- Parallel advancement of multiple value streams

4. Leverage to structural supply chain reconfiguration

- Exposure to REE, tungsten, tin, gallium
- Aligned to defence, AI, electrification
- Positioned across multiple constrained supply chains

Market Timing

- Supply chains fragmenting
- Export controls expanding
- Governments moving upstream
- Pricing reset underway

Jupiter: Sustainability Advantage

Built-In, Not Bolted-On

Critica's Jupiter project is being advanced with a focus on sustainability principles, leveraging geological and processing characteristics that have the potential to reduce environmental impact and align with global decarbonization objectives

95%

Mass rejection before leaching

Clean Geology

Preliminary testwork indicates exceptionally low uranium and thorium content, significantly below regulatory thresholds — a favourable characteristic for handling and export

Smaller Footprint

Pilot-scale beneficiation results from a 400 kg bulk sample show ~95% mass rejection across multiple ore types, meaning substantially less material requires downstream processing and storage compared to untreated feed

Resource Efficiency

Flowsheet design under evaluation suggests lower water and energy intensity than direct-leach approaches, reflecting potential processing efficiencies

Heritage Assessment

Standard heritage assessment undertaken – low risk area

Appendix A: Glossary

Key Terms and Definitions

- 1** **TREO/MREO**
 Total Rare Earth Oxides / Magnet Rare Earth Oxides - MREO refers specifically to those rare earth elements used in permanent magnets (primarily Nd, Pr, Dy, Tb)
- 2** **NdPr**
 Neodymium and Praseodymium - The two most common rare earth elements used in permanent magnets, typically accounting for ~90% of magnet composition
- 3** **Dy, Tb**
 Dysprosium and Terbium - Heavy rare earth elements added to magnets to improve performance at high temperatures, critical for EV traction motors and wind turbines
- 4** **MREP**
 Mixed Rare Earth Product - An intermediate product in rare earth processing, typically containing 30–90% TREO. MREP can be produced as a carbonate (MREC) or oxide (MREO) and is the preferred feedstock for downstream separation facilities
