

MARCH 2026 QUARTERLY REPORT

All Kopsa 2025 drill assays now reported with significant mineralised extensions confirmed; new higher-grade zone discovered at Kopsa North; drilling re-started in March; metallurgical testing ongoing; NNL remains well-funded; total gold equivalent resource inventory at 1.23Moz AuEq.

HIGHLIGHTS

- **Final assays from 27-hole diamond drill program completed at the Kopsa gold project in Finland in 2025 were reported during the Quarter.**
- **Numerous mineralised extensions outside the Kopsa block model were confirmed:**
 - **New higher-grade 'stockwork' zone intersected at the northern contact¹;**
 - **Significant mineralised extensions drilled along strike to the southeast and southwest and the large southern section of the host intrusive remains open².**
- **Drilling re-commenced at the Company's nearby Kiimala gold project in March and the rig has recently moved back to Kopsa.**
- **Detailed Kopsa metallurgical testing program remains ongoing.**
- **The metallurgical results will be combined with the 2H 2025 and ongoing 1H 2026 drilling results to produce an updated MRE for Kopsa due Q3 2026.**
- **Kopsa and Kiimala are key components of the Company's regional gold strategy in central Finland.**
- **NNL's gold projects in this region host a combined resource inventory of 34.3Mt @ 1.11g/t AuEq for 1.23Moz AuEq^{3,4,5,6} across three deposits:**
 - **1.04Moz contained gold and 38kt contained copper.**
 - **66% of the AuEq resource ozs are in the Measured & Indicated categories.**
 - **All three resources start from surface, potentially amenable to open pit mining⁷.**
 - **Kopsa is the largest deposit with 814,800oz AuEq @ 1.09g/t AuEq and 90% of the resource lying between 0-150m below surface.**
 - **All three projects offer exciting exploration upside potential⁷.**
 - **Two existing mills in the area offer potential near-term production optionality⁷.**

¹ Refer NNL ASX Announcement "New Higher Grade Gold Zone Found at Kopsa", 27 January 2026.

² Refer NNL ASX Announcements "Latest Gold Drilling Results Extend Kopsa to the Southeast", 1 December 2025 and "Substantial Gold Extensions Drilled at Kopsa to the Southwest", 8 December 2025.

³ Kopsa - 23.2Mt @ 0.85g/t Au and 0.17% Cu (1.09g/t AuEq) for 631,100oz Au and 38,360t Cu (814,800oz AuEq) in Total Resources (see also Table 1):

- 7.44Mt @ 0.95g/t Au and 0.16% Cu (1.18g/t AuEq) for 226,800oz Au and 11,780t Cu (283,200oz AuEq) in Measured category.
- 8.96Mt @ 0.73g/t Au and 0.16% Cu (0.97g/t AuEq) for 211,100oz Au and 14,060t Cu (278,400oz AuEq) in Indicated category.
- 6.75Mt @ 0.89g/t Au and 0.19% Cu (1.17g/t AuEq) for 193,200oz Au and 12,520t Cu (253,200oz AuEq) in Inferred category.

AuEq figures for Kopsa calculated using US\$1,500/oz gold price and US\$7,166/t copper price. Recovery factor of 80% is applied for both Au and Cu based on 2013 Kopsa PEA. Resultant formula applied is AuEq (g/t) = Au (g/t) + 1.49*Cu (%). In the Company's opinion, the metals included in the equivalent calculation (Au,Cu) have reasonable potential to be both recovered and sold.

⁴ Kiimala Trend - 3.85Mt @ 1.19g/t Au for 147,000oz Au in Indicated category at the Angesheva deposit (see also Table 1).

⁵ Hirsikangas - 7.29Mt @ 1.13g/t Au for 264,000oz Au (see also Table 1):

- 2.69Mt @ 1.17g/t Au for 101,000oz Au in Indicated category and 4.60Mt @ 1.10g/t Au for 163,00oz Au in Inferred category.

⁶ NNL confirms all material assumptions and technical parameters underpinning the Resource Estimates continue to apply and have not materially changed as per Listing Rule 5.23.2.

⁷ Refer NNL ASX Announcements "Major Finland Gold Transaction", 11 April 2025 and "Kiimala Project Review adds further 147koz Gold in Indicated Resources", 29 May 2025 and "Hirsikangas Increases Gold Resources by 34% to over 1Moz", 14 July 2025.

Company Completes Reporting of Assays from its First Drill Program at Kopsa

Nordic Resources Limited (ASX: **NNL**; **Nordic**, or **the Company**) concluded its first drilling program at the Kopsa gold-copper project in mid-December 2025 and all assay results have been reported by quarter end. The drill program was designed to test potential strike and depth extensions at Kopsa. In total, 27 holes were drilled, consisting of 23 newly collared hole locations and 4 extensions to historical holes, for a total of 5,971m.

Assay results for the final 15 of the 27 holes, consisting of 13 new holes and 2 hole extensions for 3,264m, were reported during the quarter. A final plan map showing all the Company's 2025 drill holes at Kopsa as reported over the past two quarters, with collar locations and drill traces, is provided in Figure 1.

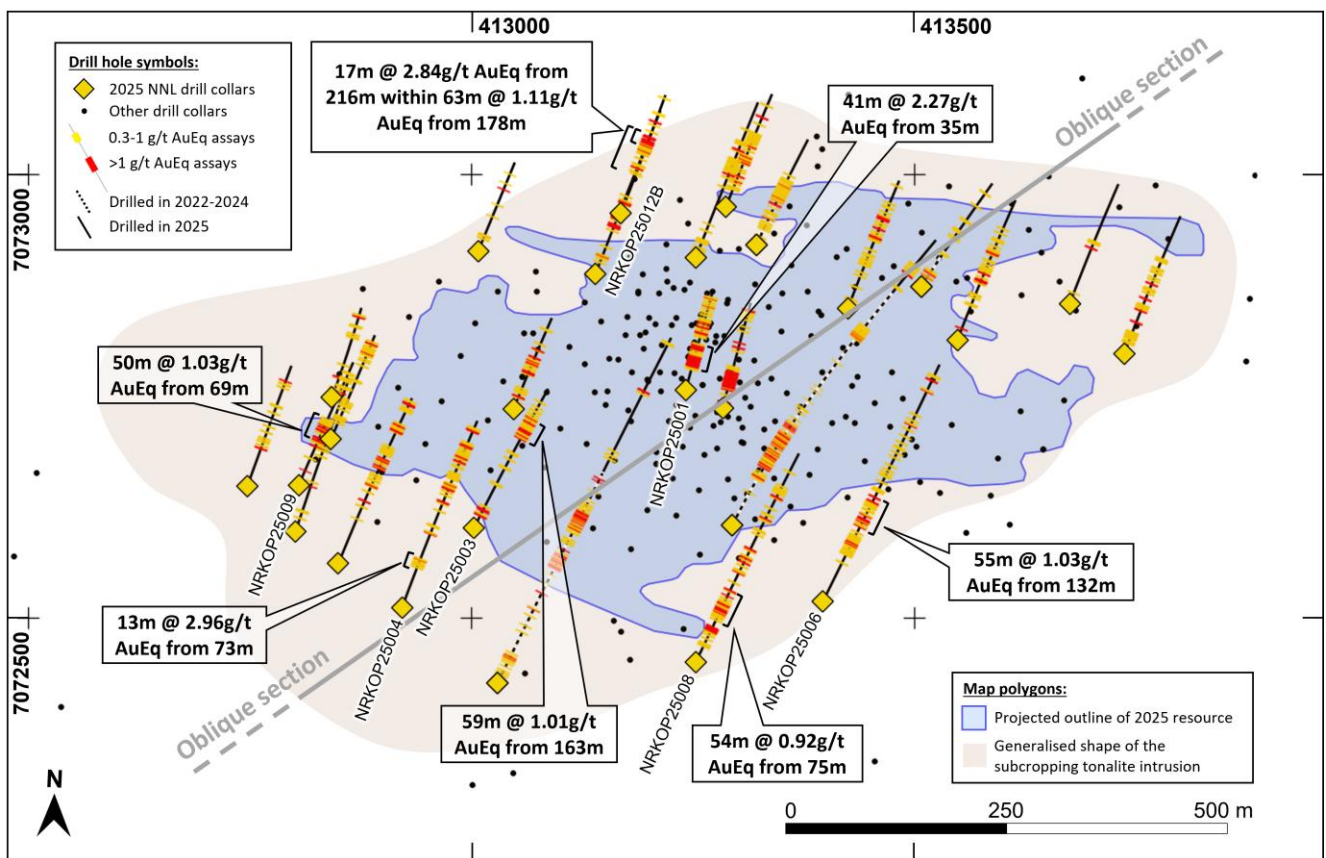

Figure 1: Plan map of Kopsa showing the drill hole collars and traces reported during the past two Quarters, the current MRE outline projected to surface, historical drill collar locations, and certain highlighted intersections. Please refer to the individual results announcements during the Quarter and the previous Quarter, as referred to within this announcement, for drill hole details. Coordinates presented in ETRS-TM35FIN system (EPSG:3067).

Apart from the centrally located intersection of 41m @ 2.27g/t AuEq from 35m in hole NRKOP25001 that was drilled to provide metallurgical sample, all of the highlighted intersections are located outside the current Kopsa MRE, either along strike from, or below, the existing block model.

New Higher Grade 'Stockwork' Zone Discovered at Kopsa

On 27 January 2026, the company announced that it had intersected a new higher-grade zone in hole NRKOP25012B, one of its first five holes drilled into the northern zone at Kopsa⁸. The cross section that includes this hole is shown in Figure 2.

⁸ Refer NNL ASX Announcement "New Higher Grade Gold Zone Found at Kopsa", 27 January 2026.

NRKOP25012B intersected the start of the northern footwall contact at approximately 220m downhole depth (155m vertical depth) with a coincident higher-grade intersection⁹ of:

- **16.9m @ 2.71g/t Au, 0.12% Cu (2.84g/t AuEq)** and 5g/t Ag from 216.1m.

The stockwork style gold mineralisation observed in this intersection is similar in nature to that observed in the higher-grade Central Zone at Kopsa, the first time this style of mineralisation has been encountered over such a significant width at Kopsa outside the Central Zone. This higher-grade interval sits within a wider intersection of:

- **63.0m @ 0.94g/t Au, 0.15% Cu (1.11g/t AuEq)** and 3g/t Ag from 178.0m.

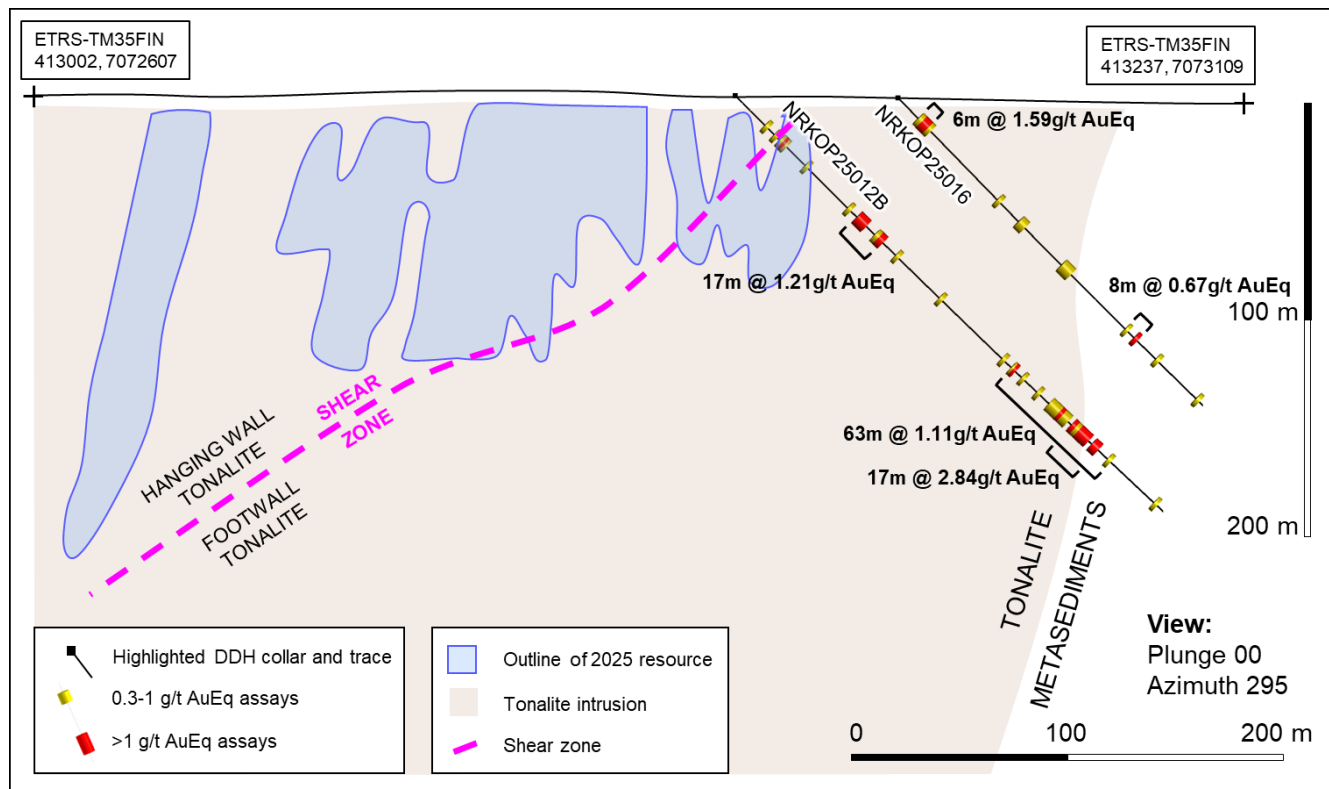

Figure 2: Kopsa cross section showing holes NRKOP25012B and NRKOP25016. The most recent MRE outline and the interpreted extent of the tonalite intrusion are also shown in this 40m thick section view. Drill hole details provided in the original announcement. Coordinates presented in ETRS-TM35FIN system (EPSG:3067).

In addition, the higher-grade zone in NRKOP25012B is coincident with a significant borehole EM conductor plate identified from deeper drilling earlier in the program, refer to ASX release “First Kopsa drilling confirms high grade, near surface gold”, dated 10 November 2025. This conductor plate was generally coincident with the interpreted location of the northern footwall contact of the host tonalite intrusive. If modelled correctly, this plate location suggests the EM anomalism may have depth continuity and provides a strong target for follow up drill testing.

Further Significant Extensions Reported Along Strike at Kopsa

NNL also announced a second batch of assay results from the northern zone and the western zone at Kopsa during the Quarter¹⁰. In both cases, new significant intersections were reported from outside the current resource. This is in addition to the discovery of significant along-strike extensions of the gold-copper mineralisation to the southeast, southwest and west of the current Kopsa resource¹¹ reported in the previous Quarter (the quarter ending December 2025).

⁹ Intersections are quoted as downhole widths. True thicknesses are estimated to be 70-80% of downhole width. Full table of drillholes and significant intersections is provided in Appendix 1.

¹⁰ Refer NNL ASX Announcements “Further Gold Mineralisation in Northern Step Out Drilling at Kopsa”, 24 February 2026 and “Step Out Drilling Extends Gold Mineralisation in Kopsa Western Zone”, 9 March 2026.

¹¹ Refer NNL ASX Announcements “Latest Gold Drilling Results Extend Kopsa to the Southeast”, 1 December 2025 and “Substantial Gold Extensions Drilled at Kopsa to the Southwest”, 8 December 2025 and “New Drilling Extends Kopsa Gold Mineralisation to the West”, 17 December 2025.

3D Images Convey the Extent of the Mineralised Extensions

Two 3D views of all the holes drilled by the Company in 2025, with drill traces, are provided in Figures 3 and 4 in order to provide a visual understanding of how the results have expanded the mineralised envelope beyond the current resource boundary.

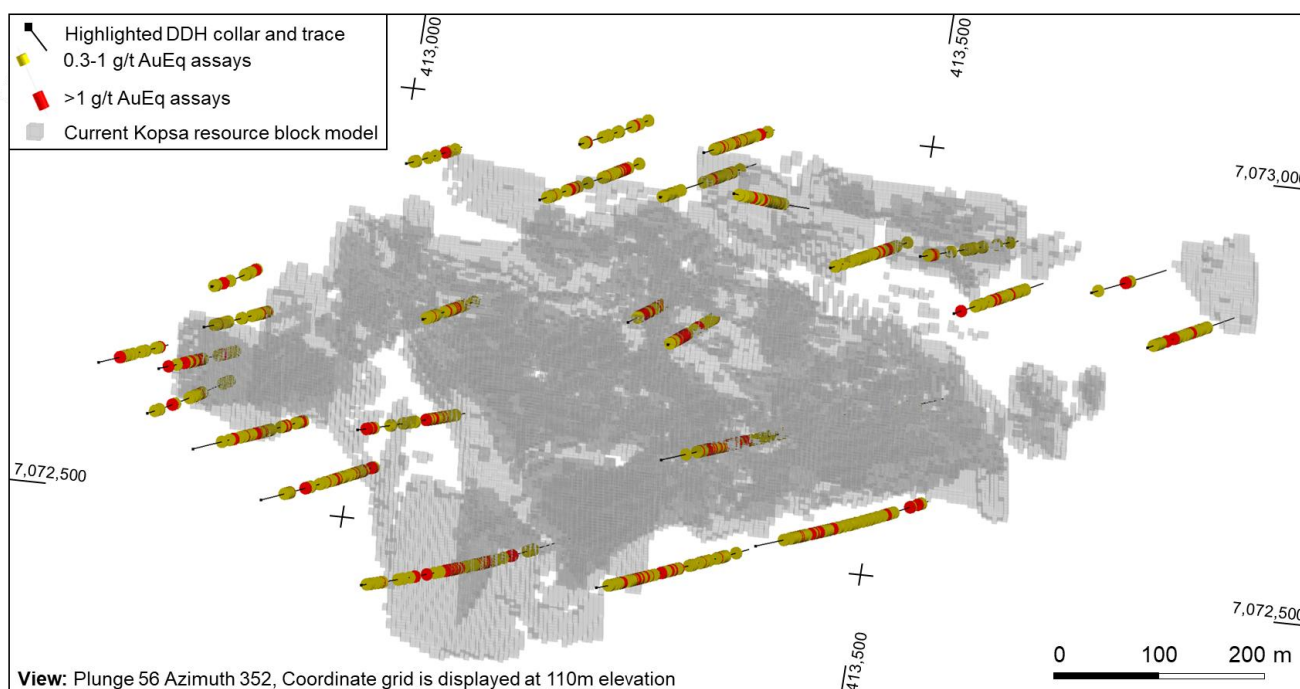

Figure 3: 3D view (elevated) of the Kopsa block model from the Southeast showing the locations of all new holes drilled at Kopsa in 2025. The gold/copper mineralisation intersected is shown in AuEq terms along the drill traces. Drill hole details provided in the original announcements. Coordinates presented in ETRS-TM35FIN system (EPSG:3067).

Figure 3 illustrates how the 2025 drilling successfully undertook step out drilling around the current resource, while also targeting some gaps within the current resource block model.

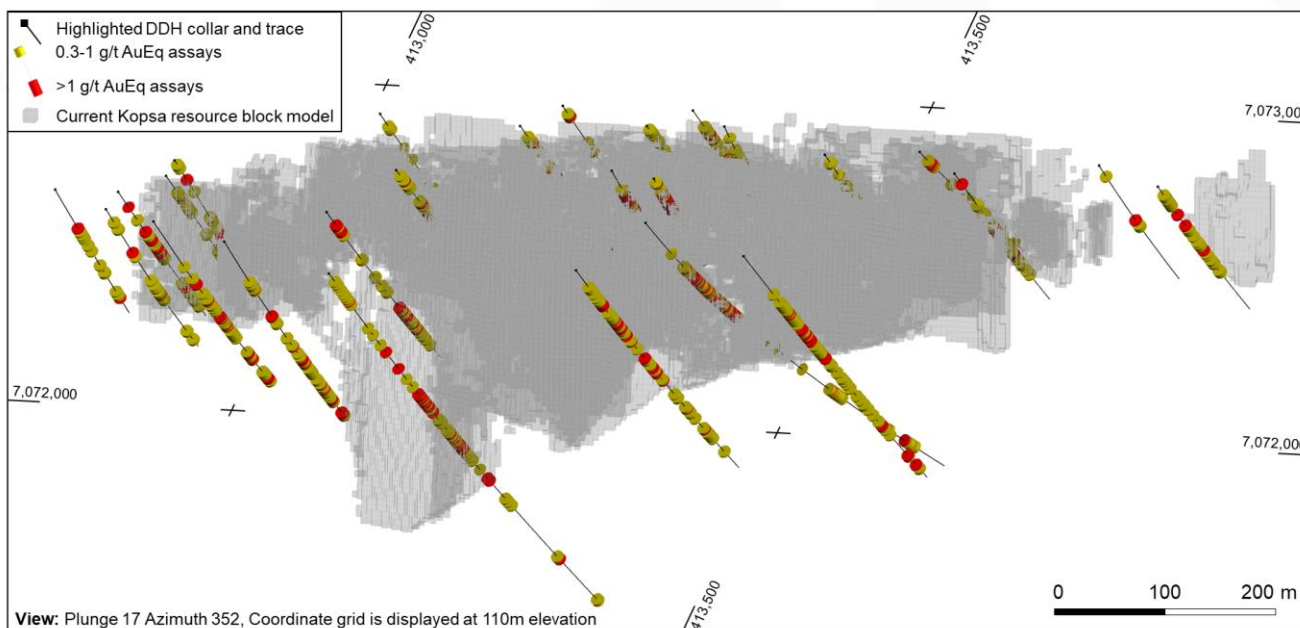

Figure 4: 3D view (ground level) of the Kopsa block model from the Southeast showing the locations of all new holes drilled at Kopsa in 2025. The gold/copper mineralisation intersected is shown in AuEq terms along the drill traces. Drill hole details provided in the original announcements. Coordinates presented in ETRS-TM35FIN system (EPSG:3067).

The potential impact of the SE and SW holes is shown more clearly in Figure 4 (ground level view from the SE direction). The extent of the wide new zones of mineralisation intersected in these holes is evident, noting that almost the entirety of these new significant intersections lies outside of the current resource block model.

Latest Drilling - Progress Update

The Company's 1H 2026 drill program commenced in early March. The rig was initially deployed at the Company's nearby Kiimala Trend gold project area. The focus was to drill approximately 1,500m of in-fill and extension holes at both the Angesneva gold deposit and the Vesipera gold prospect. Angesneva hosts a JORC Code (2012) compliant Indicated Resource of 147,000koz @ 1.19g/t Au (see Table 1 for details), while Vesipera hosts a smaller (non JORC) historical resource. Two other gold prospects at Kiimala were also drill tested. Assays are due in a matter of weeks.

The drilling at Kiimala Trend was completed in early April and the rig has since moved to re-commence drilling at the Kopsa project. Approximately 1,500m of diamond drilling is planned for Kopsa during April-May. The drilling will focus on further exploring the northern part of the intrusive contact at Kopsa and further step out holes into the southern extensions at Kopsa where there is a large volume of undrilled tonalite intrusive to be tested.

The 1H 2026 drill program is scheduled to finish in May and it is intended that the results of all the Company's drilling at Kopsa (2H 2025 and 1H 2026) will be incorporated into an updated Mineral Resource Estimate (MRE) by the end of Q3 2026. A drill rig has also been booked to conduct further drilling at Kopsa from July to December 2026.

Kopsa Metallurgical Test Program Ongoing

A metallurgical test program on the Kopsa mineralisation commenced at the end of December 2025. A great deal is already known about the met properties at Kopsa, but it is intended that this program will optimise the main process flowsheet options and the recoveries associated with these options, depending on the processing routes and plant locations available, along with the associated tailings characterisation.

It is expected that the final results of this metallurgical test work will be available in July 2026, in time to be incorporated into the planned MRE update in Q3 2026.

Overview of the MOGB Gold Projects

The Company's gold projects are located in the Middle Ostrobothnia Gold Belt (MOGB) of Finland (see Figure 5). This region contains a number of gold and base metal deposits, structurally controlled by the Raahe-Ladoga Trend. This Trend is a broad suture zone between the Karelian Craton (Archean, 3.2-2.7Ga) to the northeast and the Svecofennian domain (Paleoproterozoic, 1.92-1.80Ga) to the southwest. The MOGB represents a geological extension to the Gold Line and associated VMS trend seen in neighbouring Sweden.

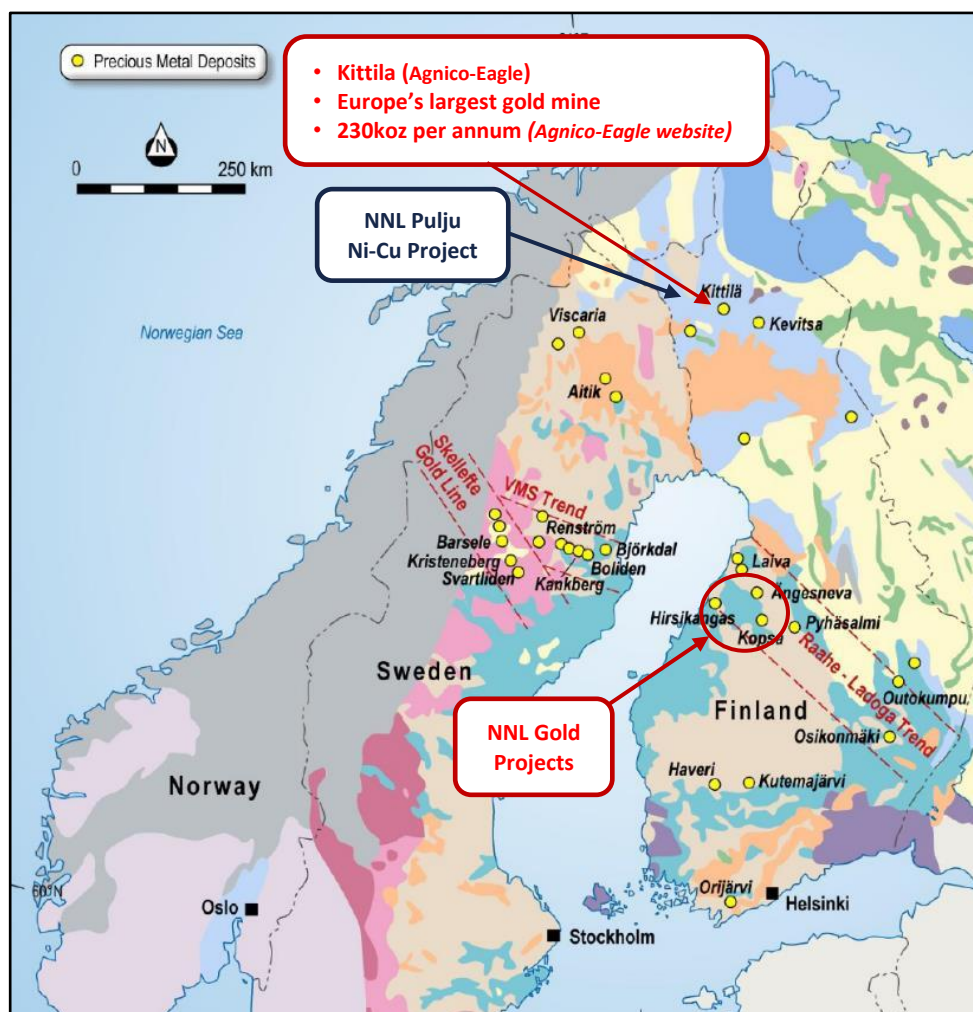

Figure 5: Location of the three gold projects shown over a geological map of Finland.

The Kopsa gold-copper project is the largest and most advanced project and hosts a JORC (2012) compliant resource of 23.2Mt @ 1.09g/t AuEq for 814,800oz AuEq (refer to Table 1). The nearby Kiimala Trend and Hirsikangas projects also host significant JORC (2012) compliant resources (see Table 1). All three projects have significant exploration upside and are located within 70km of each other. All three constitute important elements of the Company's regional gold strategy in Finland.

There are two processing plants in the MOGB region. The 1.4Mtpa Pyhasalmi copper-zinc-pyrite processing plant owned by First Quantum Minerals Ltd (TSX:FM) remains in reduced operation and is located 40km to the east of Kopsa. The formerly operating gold mine and plant at Laiva is located 120km to the northwest (see Figure 6). The Laiva plant is relatively new, but currently on care and maintenance. Completed in 2012 it was designed to process 2.2Mtpa of feed from the Laiva gold deposit. Both existing plants, or a standalone plant at Kopsa, would be potentially accessible by road or road/rail from the Kopsa, Kiimala Trend (Angesneva deposit) and/or Hirsikangas projects.

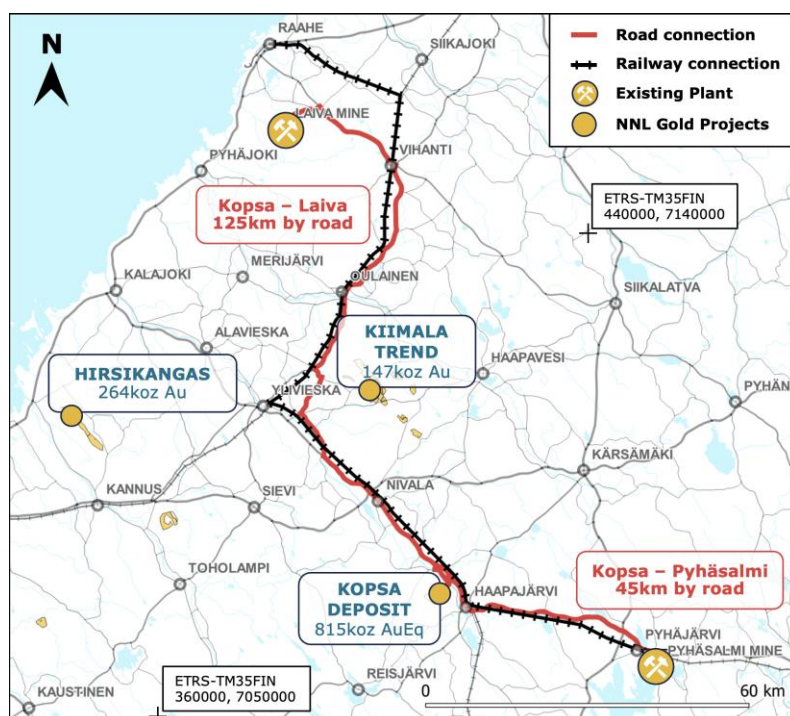

Figure 6: Location of NNL’s recently acquired gold projects shown over a map of Central Ostrobothnia showing existing plant locations with road/rail routes in the region. Coordinates presented in ETRS-TM35FIN system (EPSG:3067).

The overall resource inventory across all the three MOGB gold projects now stands at **34.3Mt @ 1.11g/t AuEq for 1.23Mt AuEq, consisting 1.04Moz of contained gold and 38kt of contained copper** across all resource categories, with 66% in Measured and Indicated categories.

MOBG Gold Project Resources¹²

Mineral Resources	Tonnes (Mt)	Au (g/t)	Cu (%)	AuEq (g/t)	Au (Moz)	Cu (kt)	AuEq (Moz)
Kopsa							
Measured Resources	7.44	0.95	0.16	1.18	0.23	12	0.28
Indicated Resources	8.96	0.73	0.16	0.97	0.21	14	0.28
Inferred Resources	6.75	0.89	0.19	1.17	0.19	13	0.25
Kopsa Total	23.2	0.85	0.17	1.09	0.63	38	0.81
Angesneva							
Indicated Resources	3.85	1.19	-	1.19	0.15	-	0.15
Angesneva Total	3.85	1.19	-	1.19	0.15	-	0.15
Hirsikangas							
Indicated Resources	2.69	1.17	-	1.17	0.10	-	0.10
Inferred Resources	4.60	1.10	-	1.10	0.16	-	0.16

Combined Project Resources	34.3	0.95	0.11	1.11	1.04	38	1.23

Table 1: Combined MOBG Gold Project JORC (2012) resources.

- Notes:
1. The resources should be considered in situ in accordance with JORC (2012) reporting guidelines.
 2. Cutoff grade of 0.5g/t AuEq was applied for Kopsa and 0.5g/t Au was applied for the Angesneva and Hirsikangas resource estimates, for the mineralisation deemed potentially mineable by open pit methods.
 3. AuEq figures were calculated for Kopsa using US\$1,500/oz gold price and US\$7,166/t copper price. Recovery factor of 80% applied for both Au and Cu based on 2013 Kopsa PEA metallurgical results and inputs. Resultant formula applied is $AuEq (g/t) = Au (g/t) + 1.49 * Cu (%)$. In the Company’s opinion, the metals included in the Kopsa equivalent calculation (Au,Cu) have reasonable potential to be both recovered and sold.
 4. Discrepancies in the totals, products or percentages in the table are due to rounding effects.

Pulju Nickel-Copper-Cobalt Project: Overview and Resources

NNL's 100%-owned Pulju Project is located in the **Central Lapland Greenstone Belt (CLGB)** 50km north of Kittilä in Finland, with access to world-class infrastructure, grid power, a national highway and an international airport. Finland is also home to Europe's only nickel smelters.

The Pulju Project is a district scale nickel-copper-cobalt exploration and development opportunity within a progressive mining jurisdiction in Europe. The known nickel mineralisation in the CLGB is typically associated with ultramafic cumulate and komatiitic rocks such as those at Pulju, with high-grade, massive sulphide lenses often associated lower grade disseminated sulphides. The disseminated nickel-cobalt at Pulju is widespread both laterally and at significant depths at Hotinvaara, indicating the presence of a vast nickel-rich system.

To date, Pulju has been shown to host predominantly shallow, disseminated lower-grade nickel sulphides, such as those forming the majority of the current Hotinvaara deposit, but also some minor, but extremely high-grade massive/remobilised sulphides. Regarding the latter, these thin zones of concentrated, remobilised iron-nickel sulphides so far intersected at Hotinvaara have attained grades of up to 9.6% Ni¹³, demonstrating that Pulju has the potential for a style of extremely high-grade nickel sulphide mineralisation that has yet to be properly targeted.

Following the 2023 drilling campaign, NNL reported an updated *in situ* Mineral Resource Estimate for the Hotinvaara disseminated nickel sulphide deposit within the Pulju Project area which comprises **418 million tonnes grading 0.21% Ni, 0.01% Co and 53ppm Cu for 862,800 tonnes of contained Ni, 40,000t of contained Co and 22,100t of contained Cu**¹⁴, making Hotinvaara already one of Europe's largest undeveloped nickel-cobalt resources. Metallurgical results demonstrated that an 18% nickel concentrate with payable cobalt can be produced from the Hotinvaara mineralisation, with 62% recovery achieved in a first pass test program.¹⁵

Figure 7. Location of Pulju Nickel Project and Western Europe's entire nickel sulphide smelting and refining capacity.

¹³ ASX release "Company Prospectus", 30th May 2022.

¹⁴ ASX release "Substantial Increase in Hotinvaara Resource Establishes Pulju as Globally Significant Nickel Sulphide District", 11th March 2024;

- Indicated Resource of 42Mt @ 0.22% Ni, 0.01% Co, 56ppm Cu;
- Inferred Resource of 376Mt @ 0.20% Ni, 0.01% Co, 52ppm Cu.

NNL confirms all material assumptions and technical parameters underpinning the Resource Estimate continue to apply and have not materially changed as per Listing Rule 5.23.2.

¹⁵ ASX release "Excellent Metallurgical Results at Hotinvaara Enhance Entire Pulju Project", 23rd October 2024.

Pulju is located 195km from Boliden's Kevitsa Ni-Cu-Au-PGE mine and processing plant in Sodankylä, Finland. Kevitsa provides feed for the Harjavalta smelter, which is located approximately 950km to the south and processes concentrate from Kevitsa's disseminated nickel sulphide ore. Finland's other nickel operation is Terrafame's Sotkamo nickel chemicals plant, located 560km south-east of Pulju which processes ore from the nearby Talvivaara nickel-zinc mine.

Financial Commentary

The Quarterly Cashflow Report for the period ending 31 March 2026 provides an overview of the Company's financial activities.

The Company's cash position as at quarter end was A\$10.6m.

Expenditure on exploration during the reporting period amounted to A\$1,221k and included drilling and assaying costs and technical consulting fees. Payments for administration and corporate costs amounted to A\$208k and related to costs for and associated with compliance costs and consulting and fees. The aggregate amount of payments to related parties and their associates included in the current Quarter cash flows from operating activities was \$107k.

ASX Listing Rule 5.3.2: Mining production and development activity expenditure for the quarter was nil and there were no substantive mining exploration activities for the quarter.

Tenement Schedule

ASX Listing Rule 5.3.3: The details of the mining tenements, the location and the Company's beneficial percentage interest held at the end of the Quarter is included in Table 2 below.

Project	Tenement Name	Area Code	Tenement Type	Status	Registered Holder	Application Date	Grant Date	Expiry or Renew Date	Area (km ²)
Kopsa (100% interest)	Kopsankangas	7405/1	Claim (old law)	Valid	Fennia Gold Oy	11/02/2002	07/05/2002		0.97

No New Exploration Information

This announcement contains references to prior exploration results, which have been cross-referenced to previous market announcements made by the Company. There is no new Exploration information in this announcement. The Company confirms that it is not aware of any new information or data that materially affects the information included in the relevant market announcements.

Competent Persons' Statement

The information in this announcement that relates to Exploration Results, Metallurgical Results and Mineral Resources has been extracted from various Company ASX announcements and are available to view on the Company's website at www.nordicresources.com or through the ASX website at www.asx.com.au (using ticker code "NNL"). The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements, and in the case of estimates of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the original market announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Forward Looking Statements

This announcement contains forward-looking statements that involve a number of risks and uncertainties. These forward-looking statements are expressed in good faith and believed to have a reasonable basis. These statements reflect current expectations, intentions or strategies regarding the future and assumptions based on currently available information. Should one or more of the risks or uncertainties materialise, or should underlying assumptions prove incorrect, actual results may vary from the expectations, intentions and strategies described in this announcement. No obligation is assumed to update forward looking statements if these beliefs, opinions and estimates should change or to reflect other future developments.

8.4 Cash and cash equivalents at quarter end (item 4.6)	10,647
8.5 Unused finance facilities available at quarter end (item 7.5)	-
8.6 Total available funding (item 8.4 + item 8.5)	10,647
8.7 Estimated quarters of funding available (item 8.6 divided by item 8.3)	8.2
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: N/A	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: N/A	
8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?	
Answer: N/A	
<i>Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.</i>	

Compliance statement

- This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- This statement gives a true and fair view of the matters disclosed.

Date: **27 April 2026**

Authorised by: **The Board of Nordic Resources Limited**
(Name of body or officer authorising release – see note 4)

Notes

- This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
- If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
- Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
- If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
- If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's Corporate Governance Principles and Recommendations, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
