

March 2026 Quarterly Activities Report

Carnavale Resources Limited ("CAV," "Company" or "Carnavale") is pleased to present its quarterly activities report for the quarter ending 31 March 2026. Activities were concentrated at the high-grade Kookynie Gold Project (KGP) located 60km south of Leonora and 180km north of Kalgoorlie in Western Australia.

During the quarter, Mining Lease M40/362, that hosts all the Kookynie Gold Project (KGP) resources was granted. Carnavale completed a detailed metallurgical and geotechnical diamond drilling program. A further 2 RC rigs completed infill resource drilling across the two proposed open pits at Swiftsure and Tiptoe. Results received from the recent drilling programs provide:

- ✦ **Excellent continuity and confidence in bonanza high grade gold zone.**
- ✦ **Mineralisation is now defined less than 20m from surface.**
- ✦ Potential to add ounces within final BFS open pit shells.
- ✦ Proposed open pits are now drilled out for mining on 10m x 10m basis.
- ✦ Mineral Resource Estimate (MRE) update has commenced with reserves to be defined in BFS.

Swiftsure - Bonanza high-grade results within the previous scoping study proposed pit include:

7m @ 28.3g/t from 71m in L1.FR.005	3m @ 37.2g/t from 74m in L1.FR.003
6m @ 27.7g/t from 97m in L1.FR.015	1.63m @ 53.8g/t from 73.8m in METDD.FR.02
5.4m @ 29.5g/t from 106m in METDD.FR.01	9m @ 9.2g/t from 72m in L1.OX.046
5m @ 24.0g/t from 61m in L1.OX.045	9m @ 8.9g/t from 60m in L1.OX.016
8m @ 15.0g/t from 54m in L1.OX.040	8m @ 10.0g/t from 77m in L1.FR.014

Tiptoe - Significant high-grade results within the previous proposed scoping study pit include:

3m @ 26.1g/t from 25m in L3.OX.029
10m @ 4.0g/t from 54m in L3.OX.021
2m @ 15.9g/t from 32m in L3.OX.001
4m @ 7.6g/t from 71m in L3.FR.007
2m @ 14.3g/t from 78m in L3.FR.009

CEO Humphrey Hale commented:

"We are delighted that the drilling reinforces the continuity of the outstanding gold grades at Swiftsure and Tiptoe. The possibility of adding extra ounces to the resource is strong as these zones continue beneath the proposed pits for underground development potential. The detailed drilling forms the backbone of a revised MRE, that will be used to calculate open pit reserves for the BFS. Carnavale is well funded and is aggressively progressing work programs that keep the BFS on track to be delivered early Q3."

Cube Consulting (Cube) continues to provide resource estimation and mine planning services to Carnavale and is advancing the mining assessment of the KGP BFS. An updated MRE has commenced and is expected to increase the confidence of resources from Indicated to Measured categories.

This improved resource will also enable reserve estimation for both the Swiftsure and Tiptoe open pits and underground extensions at Swiftsure. The infill drilling, on a 10m x10m basis, is essentially grade control spacing and significantly derisks the resource and allows improved scheduling and mining definition coupled with new geotechnical and hydrology drilling and metallurgical sampling programs.

The timing of the various work programs to complete the BFS are outlined in Figure1.

Targeting mid-year completion

Study schedule

April 2026

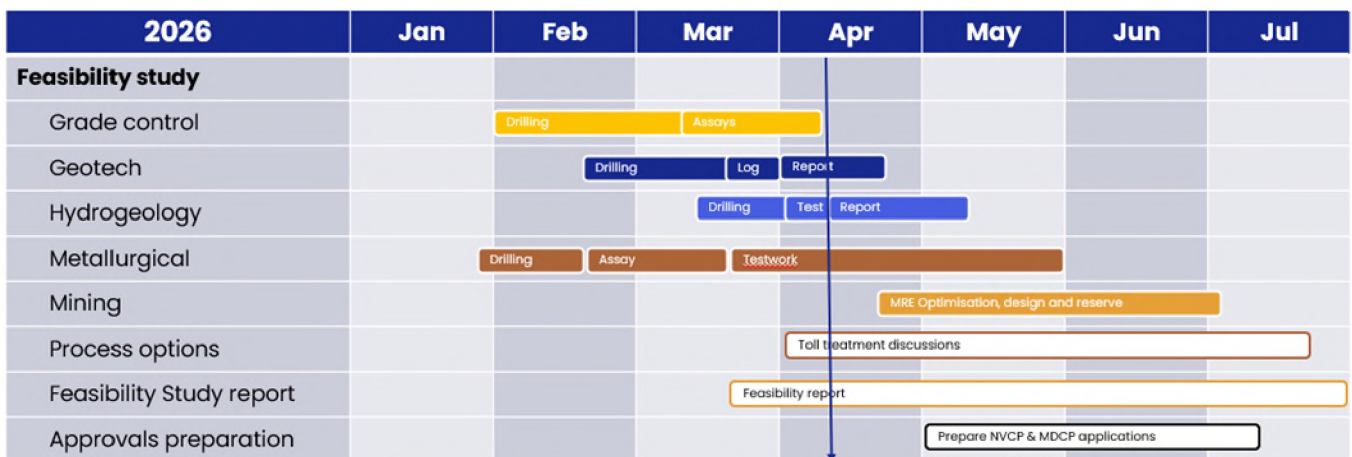

Figure 1, Indicative timetable for BFS study work.

Work programs completed for the BFS include:

- Excellent results from 138 RC holes drilled as infill resource drilling on a 10m x 10m pattern for approximately 8,384m across the Swiftsure and Tiptoe proposed open pit developments.
- These results should upgrade Indicated resources to Measured and support the estimation of Reserves for the BFS. The BFS aims to define a derisked, shovel ready project in Q3 2026. This drilling was designed to provide detailed information on the orebody and reduce operational risks during the payback period of the mine’s operation.
- +600kg of sample material from the RC drill program delivered to laboratory providing 12 discrete samples for metallurgical variability testwork.
- An additional 60 samples have been delivered from the RC drilling program to provide material for waste rock characterization studies.
- 7 large diameter (HQ3) diamond drill holes for 474m recovered +150 kg of core for metallurgical testwork that includes bond work index, abrasive testing, hardness testing and leach testing.
- 6 geotechnical diamond holes have been completed for 785m surrounding the proposed pits to provide detailed geotechnical information to support the BFS assumptions at the Swiftsure and Tiptoe pits.

- ✦ A detailed LIDAR survey was flown over the water catchment area, enabling accurate surface water flow modelling. This work in conjunction with the heritage surveys enables planning of a practical layout for the mine site development that will include waste dumps, soil dumps, road infrastructure, magazines, workshops and office sites.
- ✦ An evaluation of the subsurface water potential and dewatering requirements for the pits has been completed. A production water bore with associated monitoring bores at the KGP has been established as part of the BFS. This drilling is wholly located on the granted mining lease M40/362.
- ✦ A second heritage survey was completed over the remaining areas within mining lease area M40/362, all of the miscellaneous lease L40/53 and the northern part of P40/1480 adjacent to M40/355, allowing the Company to plan final layout designs for the KGP.

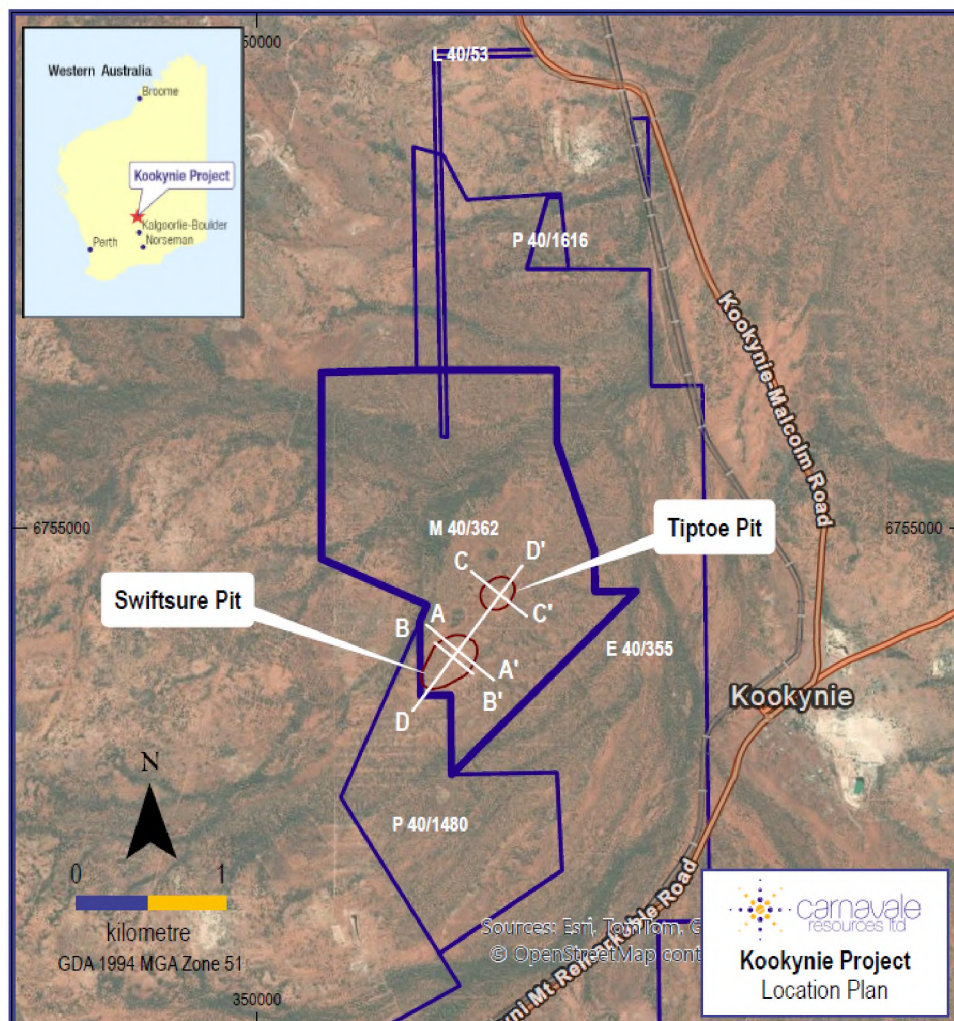

Figure 2, Location plan of Kookynie Gold Project in the Eastern Goldfields, with proposed open pit developments at Swiftsure and Tiptoe.

Swiftsure Mineralisation

The mineralisation at Swiftsure is characterized by quartz, carbonate veining with minor sulphides, scheelite and cobalt (Figure 3). The quartz veining is located within a major structure that strikes northeast southwest and dips steeply southeast through the tenement package. Most of the gold mineralisation is hosted in the quartz veining with additional gold mineralisation in the altered selvage to the vein.

The major structure hosts bonanza grades of an ounce per tonne or more in plunging shoots within the veins themselves with mineralised widths ranging from 0.5m to 15m. Some of the best high-grade gold intercepts from the recent drilling are illustrated in the sections and plans within this report. This major structure hosts Swiftsure, Tiptoe, Champion South and Valiant prospects.

There is exploration upside and further possibilities to increase resources at all these prospects. Exploration drilling to explore these prospects is being planned and is targeting additional resources and new discoveries using geological information from recent infill drilling.

Figure 3. Swiftsure high-grade zone with typical grey quartz, minor sulphides and gold - **2m @ 17.4g/t** from 88m in RC L1.FR.006

The drill plan at the Swiftsure deposit above (Figure 4) shows the collar locations of the infill drilling coloured by grade as gram metres from the downhole intercept. Exceptional results are shown as callouts on the plan with earlier drilling shown as black squares and also the outline of the October 2025 Scoping Study proposed pits (brown linework).

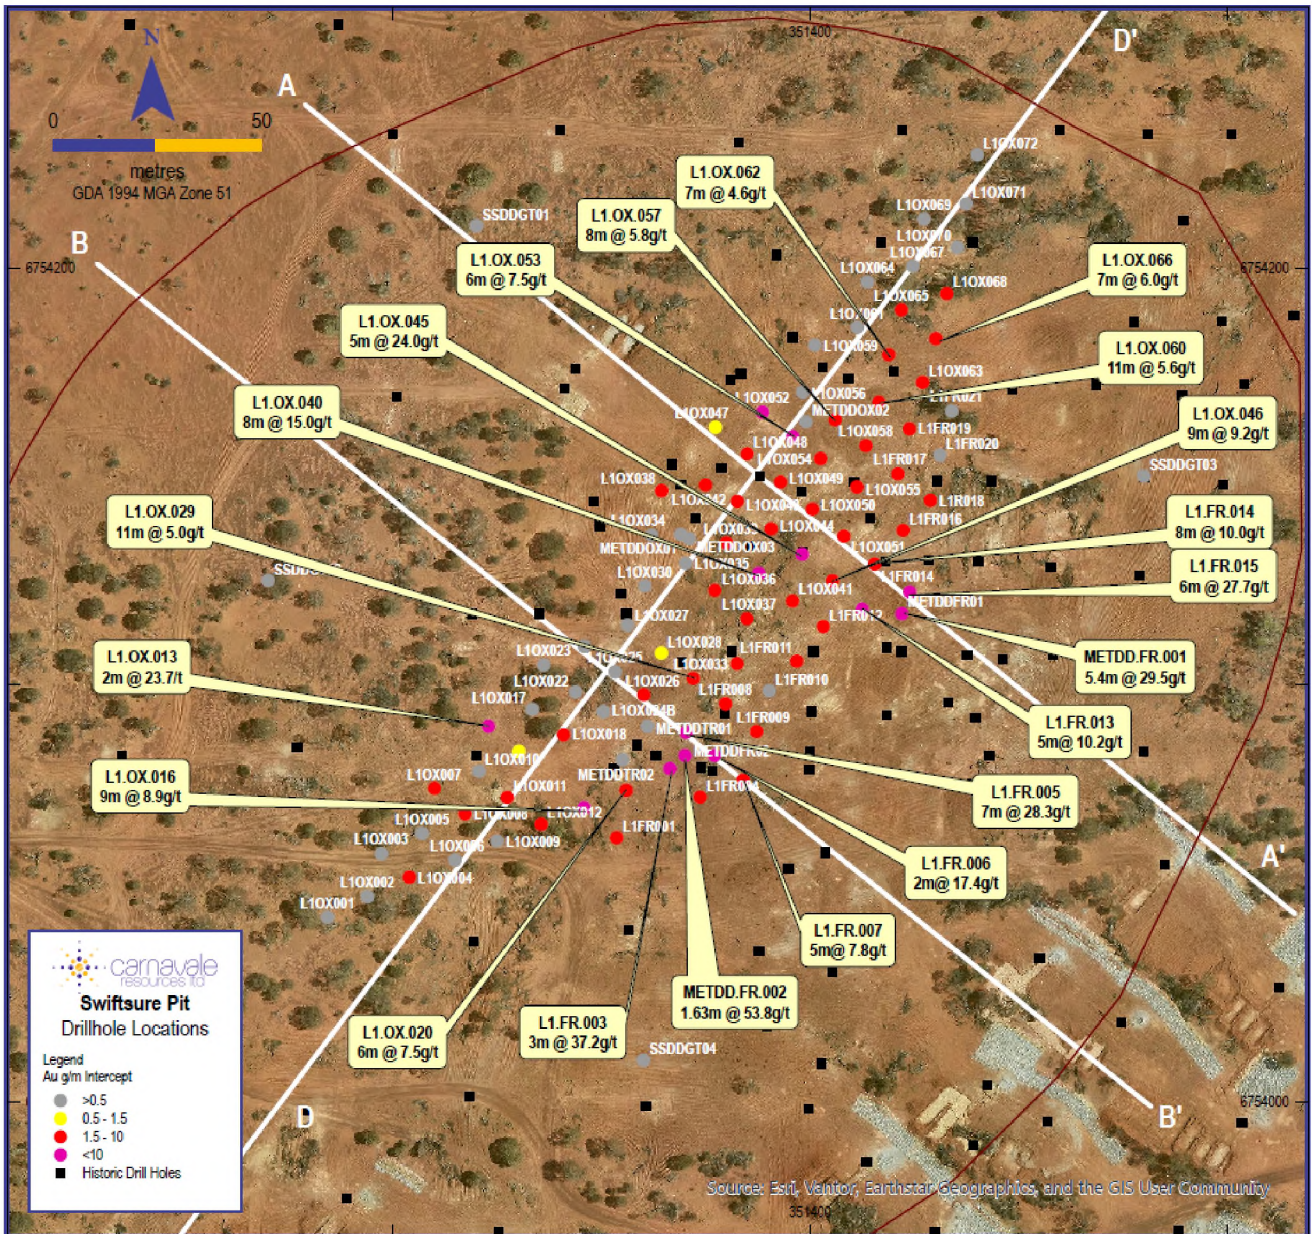

Figure 4, Plan view of infill drilling at **Swiftsure** showing the highest-grade intercepts. Further details of significant intercepts for each hole are listed in the Appendix.

In section A - A' below (Figure 5) high grade mineralisation **6m @ 2.4g/t** starts from within 20m of surface and is continuous to the base of the proposed pit and beyond. The highest-grade mineralisation **6m @ 27.7g/t** is within the fresh rock at the base of the pit and extends underground beneath the pit. The infill grade control at Swiftsure was designed to drill to 100m below surface. The depth of the proposed pit on this section is 120m from surface.

Geotech drilling completed is shown as green either side of the proposed pit development as SSDD.GT01 and SSDD.GT.03. Four large diameter HQ3 cored geotechnical holes were drilled into the proposed pit wall areas at Swiftsure and two geotechnical holes were completed at Tiptoe. This drilling provided detailed geotechnical information on pit wall strength that allows design of the final walls of the proposed pits at Swiftsure and Tiptoe. No assays were taken from this drilling as the holes were drilled in waste rock domains.

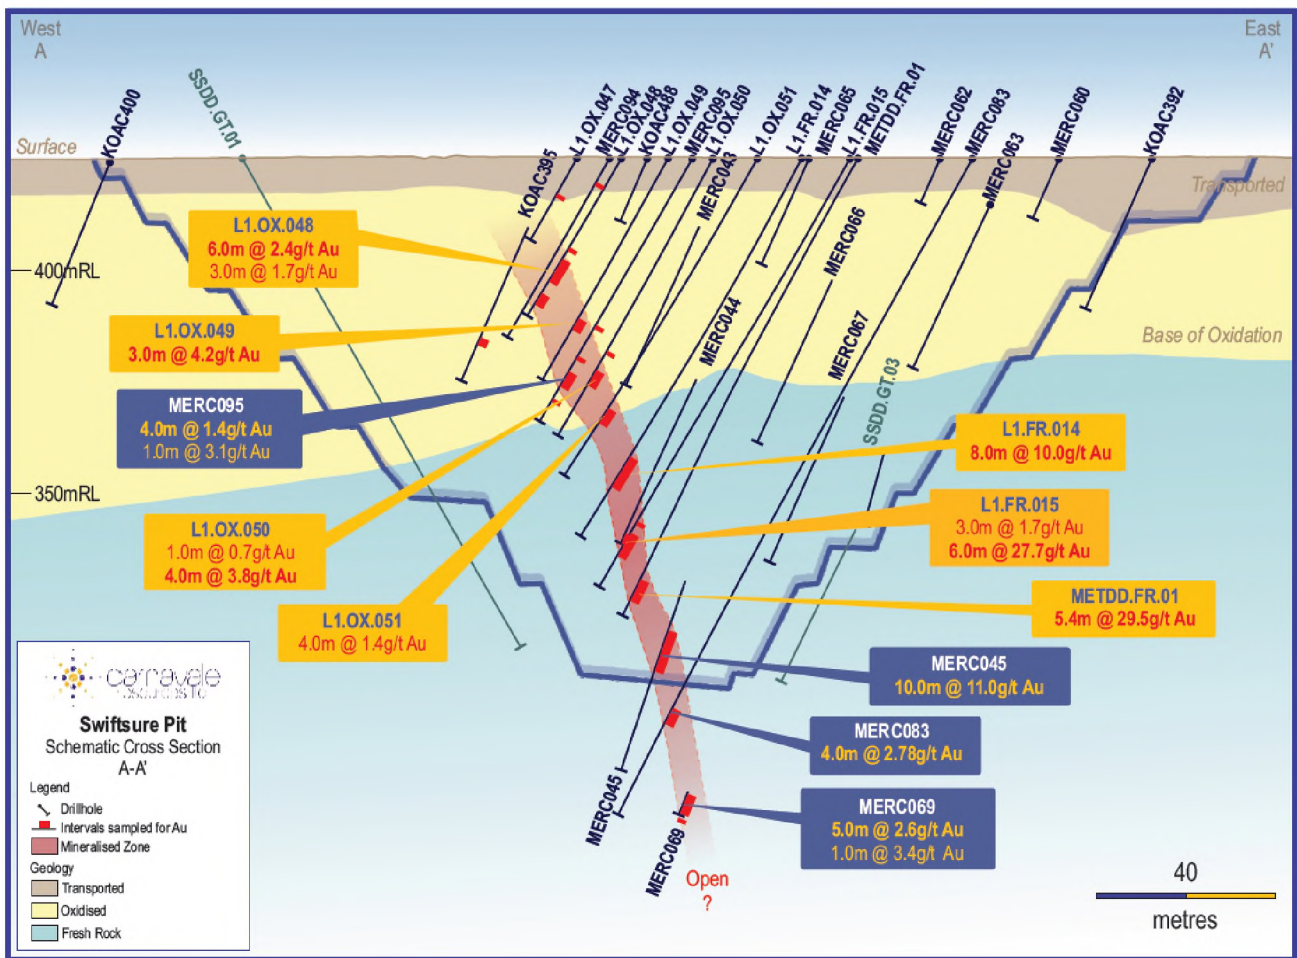

Figure 5. Section A-A' through **Swiftsure** mineralisation with proposed pit outline from October 2024 Scoping Study. New drilling labelled orange.

Further south, in section B – B' (Figure 6) the bonanza grades continue in the fresh rock with grades of **7m @ 28.3g/t** in **L1.FR.005** and also **6m @ 50.7g/t** in **MERC047** from historical drilling at 110m below surface in the open pit. The proposed pit at Swiftsure is designed to reach a total depth of 140m. Mineralisation remains open beneath the pit and will be developed by underground mining methods.

Worth noting, the high-grade mineralisation in the oxide starts at 40m with **5m @ 2.3g/t** which suggests there could be an increase in oxide resources within the proposed pit development on this section, as the infill drilling has extended the mineralised envelope closer to the surface in the saprolite profile.

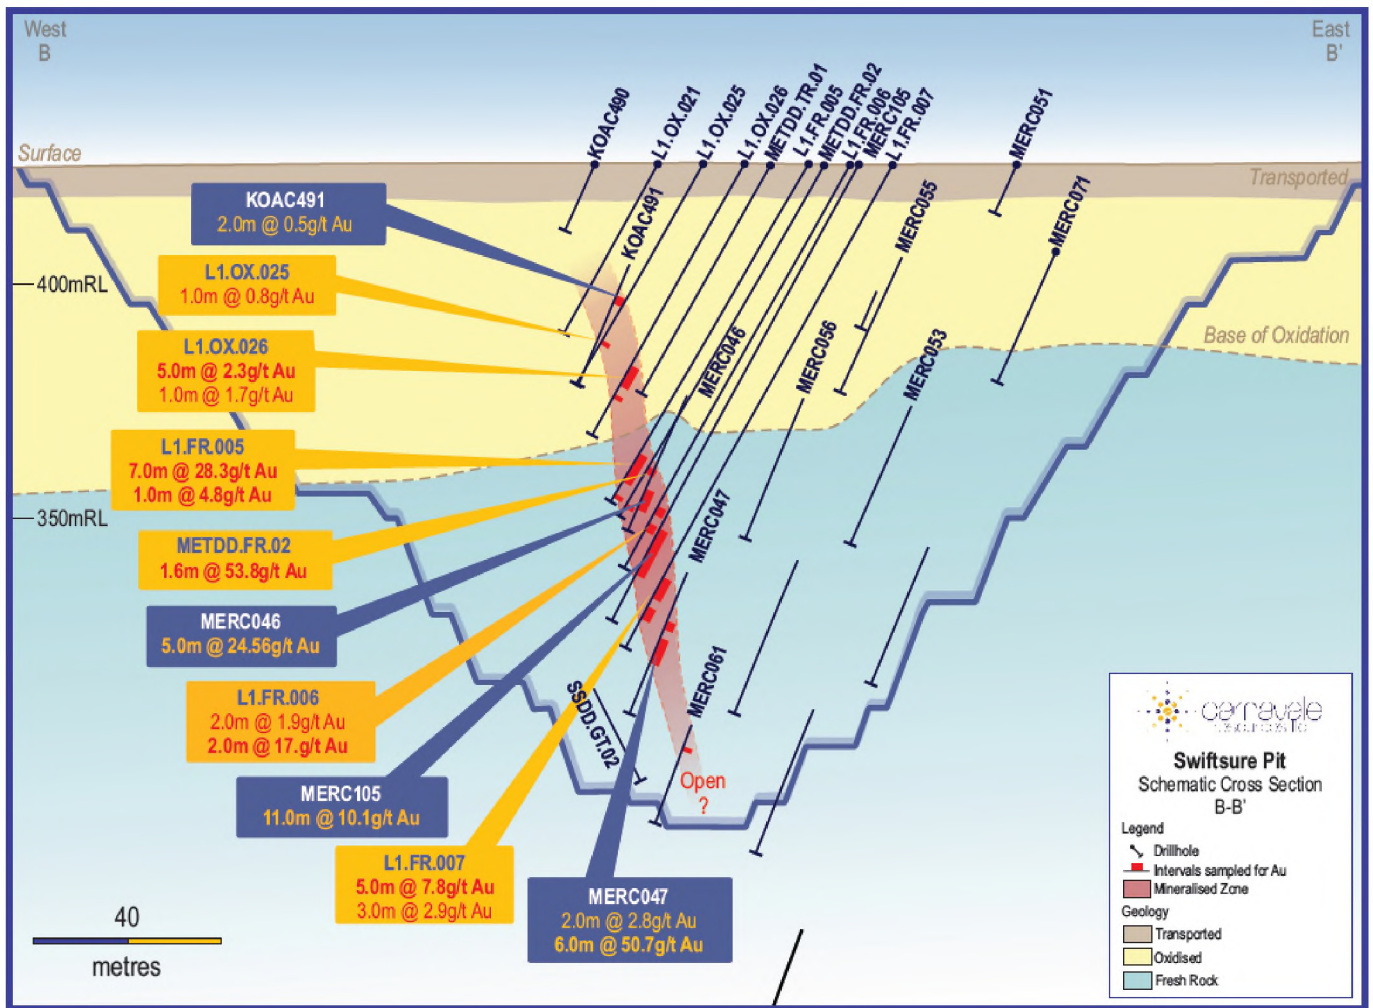

Figure 6. Section B-B' through **Swiftsure** mineralisation with proposed pit outline from October 2024 Scoping Study. New drilling labelled orange.

Tiptoe Mineralisation

Mineralisation within the Tiptoe pit has the same characteristic quartz, carbonate, sulphide, scheelite and sericite alteration assemblage as Swiftsure and is hosted within the similar structures.

The gold grades discovered at Tiptoe remain very high within the pit and are accessed at similar levels to the southern part of Swiftsure at about 35m below surface in the saprolite profile with grades of **7m @ 3.2g/t** and fresh rock intercepts of **5m @ 7.5g/t** in earlier drilling MERC128 (Figure 8). The infill drilling was designed to confirm the mineralisation to 80m below surface.

The transported alluvial material and upper saprolite near surface is characteristically lacking in mineralisation, at Tiptoe and Swiftsure, although there are local spikes at the base of transported representing alluvial gold accumulations.

The depleted saprolite provided challenges to early exploration at Kookynie and it was important to drill to the fresh rock interface to test the prospect effectively.

Figure 7, Plan view of infill drilling at Tiptoe showing the highest-grade intercepts. Further details of significant intercepts for each hole are listed in the Appendix.

Figure 8. Section C-C' through **Tiptoe** mineralisation with proposed pit outline from October 2024 Scoping Study. New drilling labelled orange. Geotech hole TTDD.GT.02 shown

Underground development

The Company intends to develop the underground portion of the mine in conjunction with production from the open pits. The October 2025 Scoping Study underground decline and access outlines are shown in Figure 9. It is intended that underground production and infill drilling will be completed during production from the open pits and paid for by cashflow from operations. This will provide the most economical way to unlock the future underground potential at the KGP.

Access to the proposed portal to the underground mine is proposed to be from within the open pit development at Swiftsure. Gold production from the underground mine is expected to continue after the Swiftsure pit has been completed.

Project. M40/362 provides sufficient area for all the project development requirements including open pits, waste dumps ROM handling and crushing areas, workshops and offices.

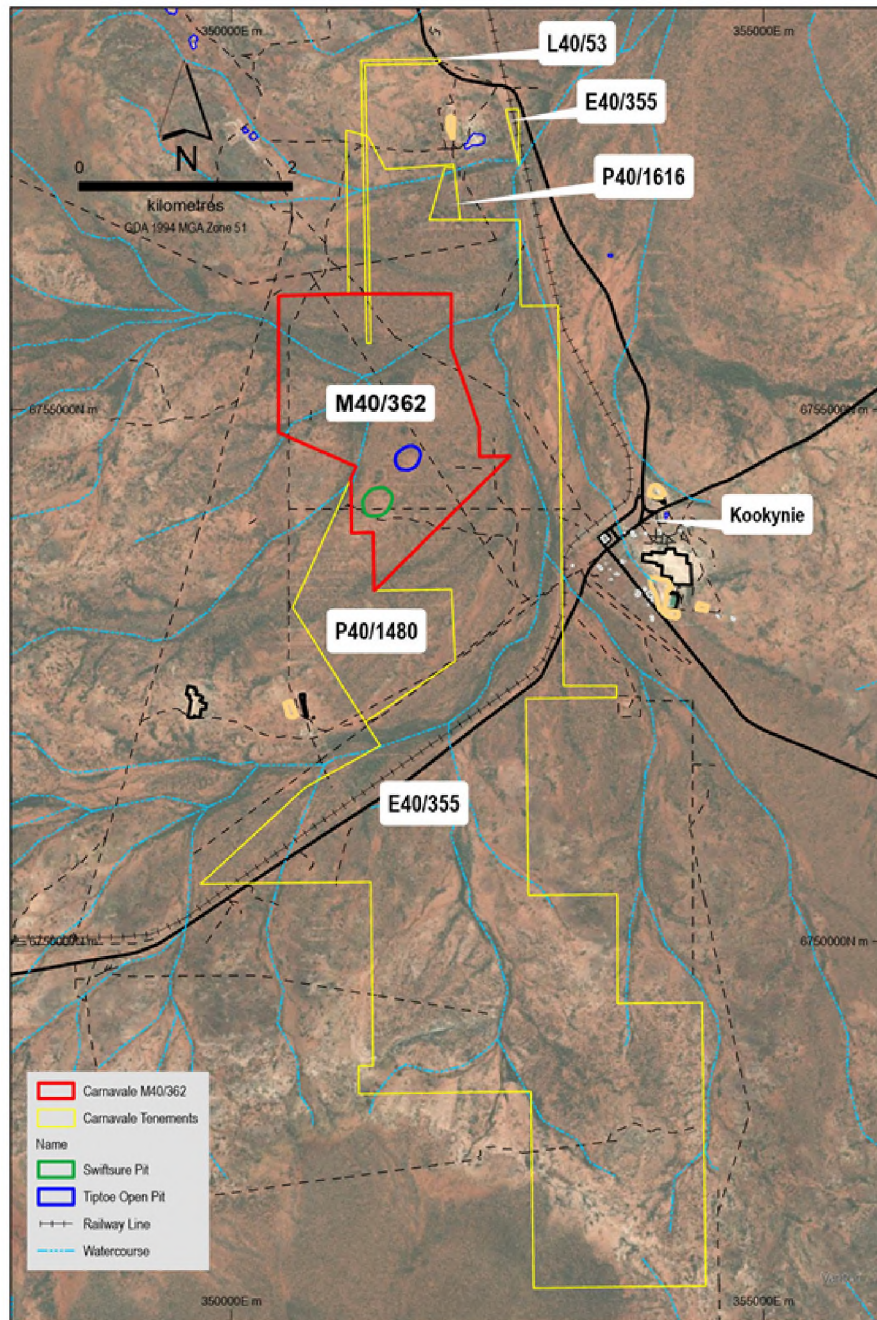

Figure 10, Carnavale tenement plan showing location of M40/362.

The tenements comprising the Kookynie Gold Project have changed as follows. The majority of the area that was held as prospecting licence P40/1380 has been included in the new mining licence M40/362. The whole prospecting licence P40/1381 has been amalgamated into exploration licence E40/355. The new mining licence M40/362 has been granted over a portion of the earlier exploration licence E40/355.

As part of the mine development process Carnavale has applied for a miscellaneous licence L40/53 that will provide a corridor from the mining licence to the Kookynie - Malcolm Road that leads to Leonora and access to the mine site and transport of ore to third party treatment options.

In addition, Carnavale has added a small prospecting licence P40/1616 to the tenement package that has the potential for further exploration success. Figure 10 details the current tenement holdings.

ASX Additional Information

1. ASX Listing Rule 5.3.1: Exploration and Evaluation Expenditure (excluding staff costs) during the Quarter was \$1,076,000. Full details of exploration activity during the Quarter are set out in this report.
2. ASX Listing Rule 5.3.2: There were no substantive mining production and development activities during the Quarter.
3. ASX Listing Rule 5.3.5: A total of \$45,000 was paid to related parties during the quarter comprising Director fees. During the quarter, \$47,745 was paid to Corporate Consultants Pty Ltd, a company in which director Mr Gajewski is a director and has a beneficial interest, for accounting, secretarial, corporate service fees, and provision of office space.

This release is approved by the Board of Carnavale Resources Limited.

Competent Persons Statement

The information that relates to Exploration Results for the projects discussed in this report represents a fair and accurate representation of the available data and studies; and is based on, and fairly represents information and supporting documentation reviewed by Mr. Humphrey Hale, a Competent Person who is a Member of The Australian Institute of Geoscientists. Mr. Hale is the Chief Executive Officer of Carnavale Resources Limited and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the “Australasian Code for Reporting of Exploration Results, Mineral Resource and Ore Reserves”. Mr. Hale consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to Estimation and Reporting of Mineral Resources at the Kookynie Gold Project is based on information compiled by Mr Michael Job, who is a Fellow of the Australasian Institute of Mining and Metallurgy (FAusIMM). Mr Job is an independent consultant employed by Cube Consulting. Mr Job has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Job consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

Forward Looking Statements

Statements regarding Carnavale’s plans with respect to the mineral properties, resource reviews, programs, economic studies, and future development are forward-looking statements. There can be no assurance that Carnavale’s plans for development of its mineral properties will proceed any time in the future. There can also be no assurance that Carnavale will be able to confirm the presence of additional mineral resources/reserves, that any mineralisation will prove to be economic or that a mine will successfully be developed on any of Carnavale’s mineral properties.

No New Information

With reference to previously reported Exploration results and Minerals resources, the Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement and, in the case of estimates of mineral resources that all material assumptions and technical parameters underpinning the estimates in the relevant market announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original market announcements.

The information in this report is extracted from ASX releases, “Carnavale increases Resource at Kookynie Gold Project” dated 17 July 2025 and “Study Doubles value of Kookynie Gold Project” dated 2 October 2025”. This is available to view on www.carnavaleresources.com.

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and, in the case of estimates of Mineral Resources, forecast financial information and production targets that all material assumptions and technical parameters underpinning the estimates in the relevant market announcements continue to apply and have not materially changed.

Information relating to Previous Disclosure

Information relating to Exploration Results and Mineral Resources associated with previous disclosures relating to the Kookynie Gold Project in this announcement has been extracted from the following ASX announcements:

8.4 Cash and cash equivalents at quarter end (item 4.6)	5,084
8.5 Unused finance facilities available at quarter end (item 7.5)	-
8.6 Total available funding (item 8.4 + item 8.5)	5,084
8.7 Estimated quarters of funding available (item 8.6 divided by item 8.3)	4.29
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: N/A.	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: N/A.	
8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?	
Answer: N/A.	
<i>Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.</i>	

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 28 April 2026

Authorised by the Board of Directors

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg *Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
