

Quarterly Activities and Cashflow Report – March 2026

HIGHLIGHTS

Innamincka Dome, South Australia

- Yarrow generated \$1.09 million in gross production receipts during the quarter, with 91% from gas sales and the remainder from condensate.
- Binding AFE executed with Santos for a two-well Yarrow development program.
- Binding AFE executed with Santos for high-impact Willowie appraisal well, targeting near-term production and cashflow generation.
- Internal AFE estimates indicate an expected initial production rate (P50) of ~2.13 MMscf/d and estimated ultimate recovery (P50) of ~3.09 Bcf (100% basis).
- Funding secured and advanced to support participation in the Santos-operated Innamincka drilling program, including placement, rights issue and underwriting.

Killanoola Oil Project, South Australia

- Continued evaluation of completion and stimulation options for KN2.
- Workover and testing planning progressed for KN2 and DW1.

Corporate

- \$0.8 million Tranche 1 placement completed.
- Rights issue to raise up to ~\$4.2 million fully underwritten.
- Cost reduction program implemented, including 25% reduction in Board remuneration.
- The Company has cash reserves as at 31 March 2026 of \$2.07m. This cash position will be boosted by the recently completed placement and rights issue totalling approximately \$5.2 million.

Red Sky Energy (ASX: ROG) (Red Sky or the Company) presents its Quarterly Activities Report for the period ended 31 March 2026. During the March quarter, the Company focused on advancing funding and approvals to support the next phase of development at Innamincka, where Red Sky has exposure to existing production, established infrastructure and near-term drilling activity. The Company also continued technical and operational assessment of the Killanoola Oil Project while maintaining its interest in Block 6/24 offshore Angola.

INNAMINCKA DOME PROJECTS (Cooper Basin, South Australia)

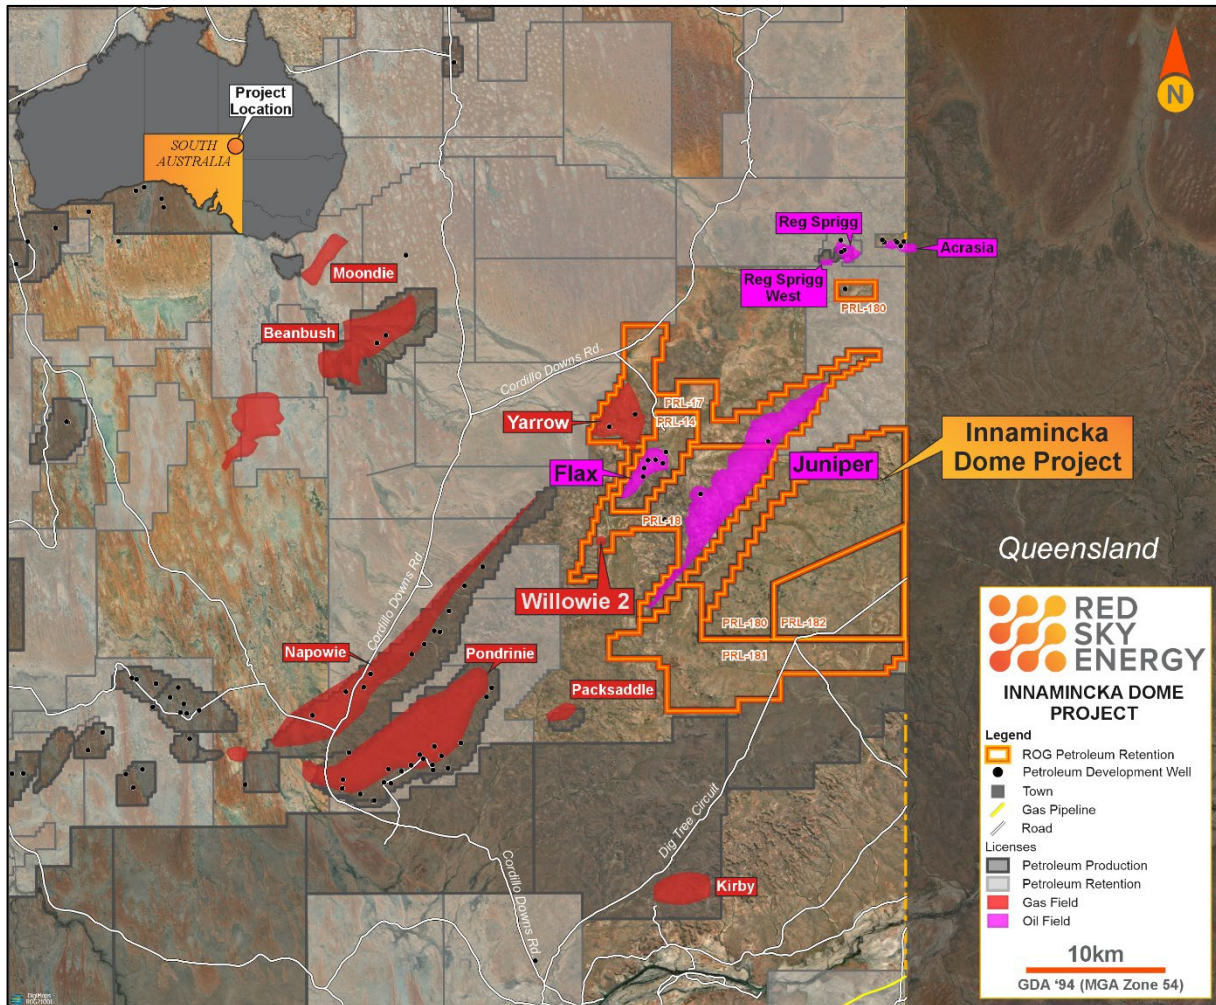

Figure 1: Innamincka Dome Projects location map with Yarrow and Willowie highlighted. Red Sky holds 20% working interest in the six PRLs (14, 17, 18, 180, 181, 182). Santos, the operator farmed in, holds 80%.

YARROW DEVELOPMENT PROGRAM

During the quarter, Red Sky executed a binding Authority for Expenditure (AFE) with Santos Limited for a two-well Yarrow development program within the Innamincka Dome. Execution of the AFE secures the Company's participation in the next phase of development within the Santos-operated joint venture. (Refer ASX Announcement [1 April 2026](#).)

The Yarrow development program is located within an established producing gas system with direct access to existing Santos-operated gas gathering, pipeline and processing infrastructure. This infrastructure is connected to the Moomba processing facility, enabling a capital-efficient development pathway and reducing the time from drilling to first production.

The two-well program represents the next stage of development within the Yarrow field and follows the successful re-entry, stimulation and commissioning of Yarrow 1 in [November 2025](#). The planned Yarrow wells are expected to target similar formations within the same producing fairway, leveraging existing geological

understanding, well performance data and seismic interpretation. The program is designed to deliver incremental production from known accumulations, with reduced geological risk relative to exploration drilling.

Red Sky's share of the Yarrow AFE is estimated at approximately \$2.0 million for the two wells (100% basis cost subject to joint venture finalisation and operational execution). Funding for the program is supported by the Company's capital-raising initiatives announced during the quarter, including the placement and the proposed rights issue, with the placement providing initial funding and the rights issue intended to fund the balance of the Company's participation.

Drilling of the first Yarrow development well is expected to commence following final operational scheduling with the joint venture. The Company considers participation in the Yarrow development program to be aligned with its strategy of pursuing short-cycle, infrastructure-backed development opportunities with the potential to generate near-term production and cashflow.

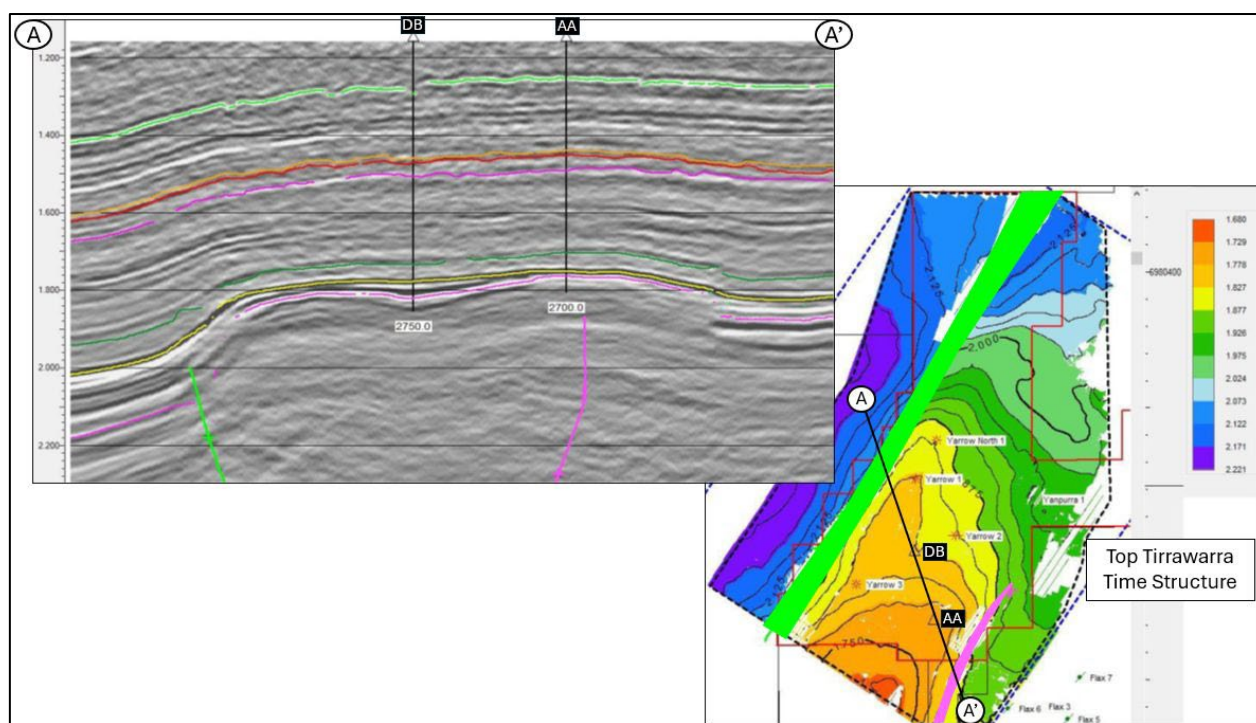

Figure 2: Yarrow field structure map and seismic section highlighting proposed 2026 well locations (A-A' cross-section)

WILLOWIE APPRAISAL WELL - AGREEMENT EXECUTED WITH SANTOS

Subsequent to quarter end, Red Sky announced that it had executed a binding Authority for Expenditure (AFE) with Santos for the Willowie appraisal well within the Innamincka Dome. (Refer to ASX Announcement [13 April 2026](#).)

Willowie appraisal represents the next step in extending the Yarrow development within the producing fairway. The well is located in PRL 18, adjacent to the Yarrow field, and targets the same Patchawarra and Tirrawarra formations. The Willowie well is positioned up-dip of Willowie 1 and, if successful, is expected to be tied into existing infrastructure, providing a pathway to near-term production.

The AFE covers drilling, fracture stimulation, completion and connection of the well. The gross cost is estimated at approximately A\$8.7 million, with Red Sky's 20% share estimated at approximately A\$1.75 million. Participation in the Willowie appraisal AFE forms part of Red Sky's broader funded development program following the [recently announced placement and underwritten rights issue](#).

Based on internal joint venture AFE estimates, the well has an expected initial production rate (P50) of approximately 2.13 MMscf/d and estimated ultimate recovery (P50) of approximately 3.09 Bcf of raw gas (100% basis). These estimates are derived from internal modelling and analogue performance from nearby wells. There is no certainty that the well will achieve these production rates or recoveries.

Drilling is expected to commence following final operational scheduling with the joint venture.

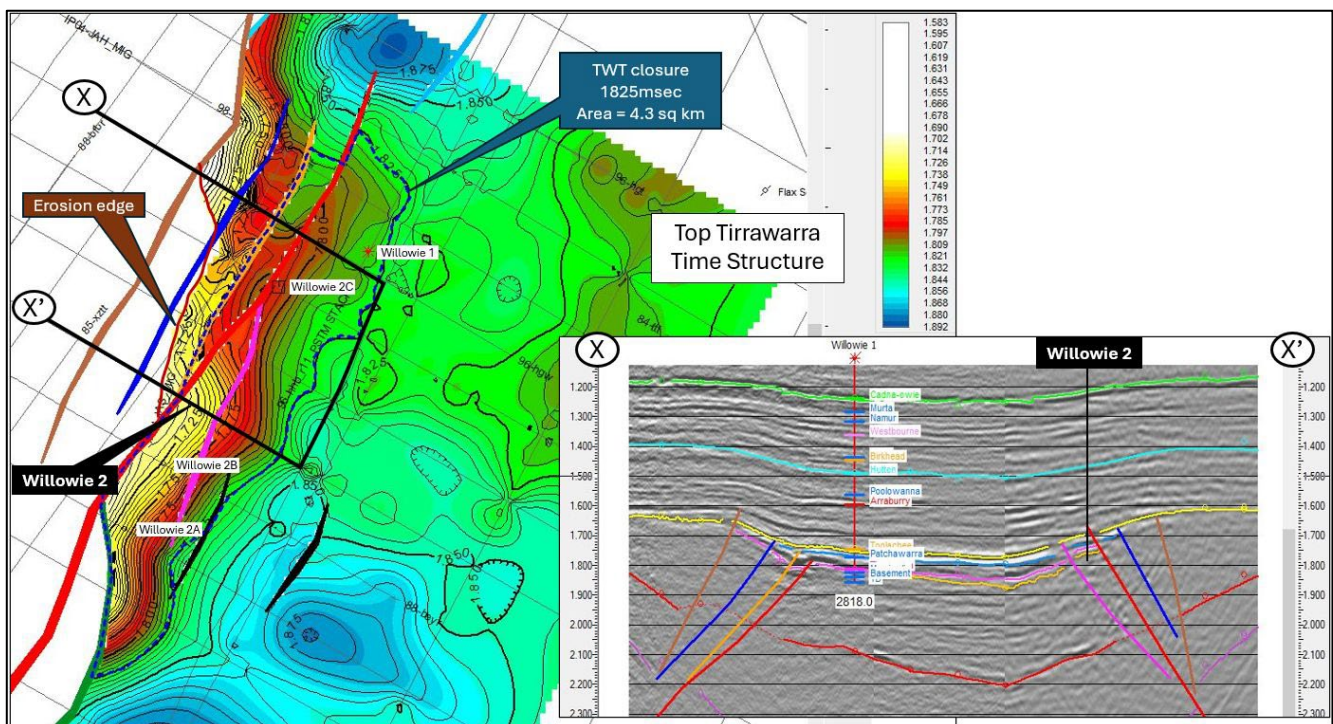

Figure 3: Willowie field structure map and seismic section highlighting proposed 2026 Willowie 2 well and other possible locations (X-X' cross section)

YARROW 1- ONLINE AND PERFORMING ABOVE EXPECTATIONS

Yarrow 1, brought online in [November 2025](#), continued to underpin the Company's production base. Yarrow 1 demonstrated the effectiveness of the Company's development approach, with early production rates exceeding pre-development expectations and confirming the ability to unlock gas deliverability from the Patchawarra and Tirrawarra formations within the Innamincka Dome.

Initial ramp-up production reached approximately 2.4 MMscf/d, exceeding the AFE P50 expectation of 1.6 MMscf/d. These rates represent early-time performance and should not be interpreted as stabilised long-term production.

The well materially increased Innamincka production and supports near-term cashflow.

YARROW 3 – CONTINUED PRODUCTION

Yarrow 3 continued to provide steady gas production throughout the March quarter. Production performance remained consistent with prior periods, providing a stable cash flow base.

Red Sky reported cash receipts of **\$1.09** million for the March quarter, with the majority of revenue from natural gas sales, supplemented by LPG and condensate.

Since the commencement of production in August 2023 through to 31 March 2026, Yarrow has generated total cash receipts of **\$6.59** million, with approximately **85%** attributable to gas sales and the balance from associated liquids. A revised extension of the gas contract with Origin has been finalised.

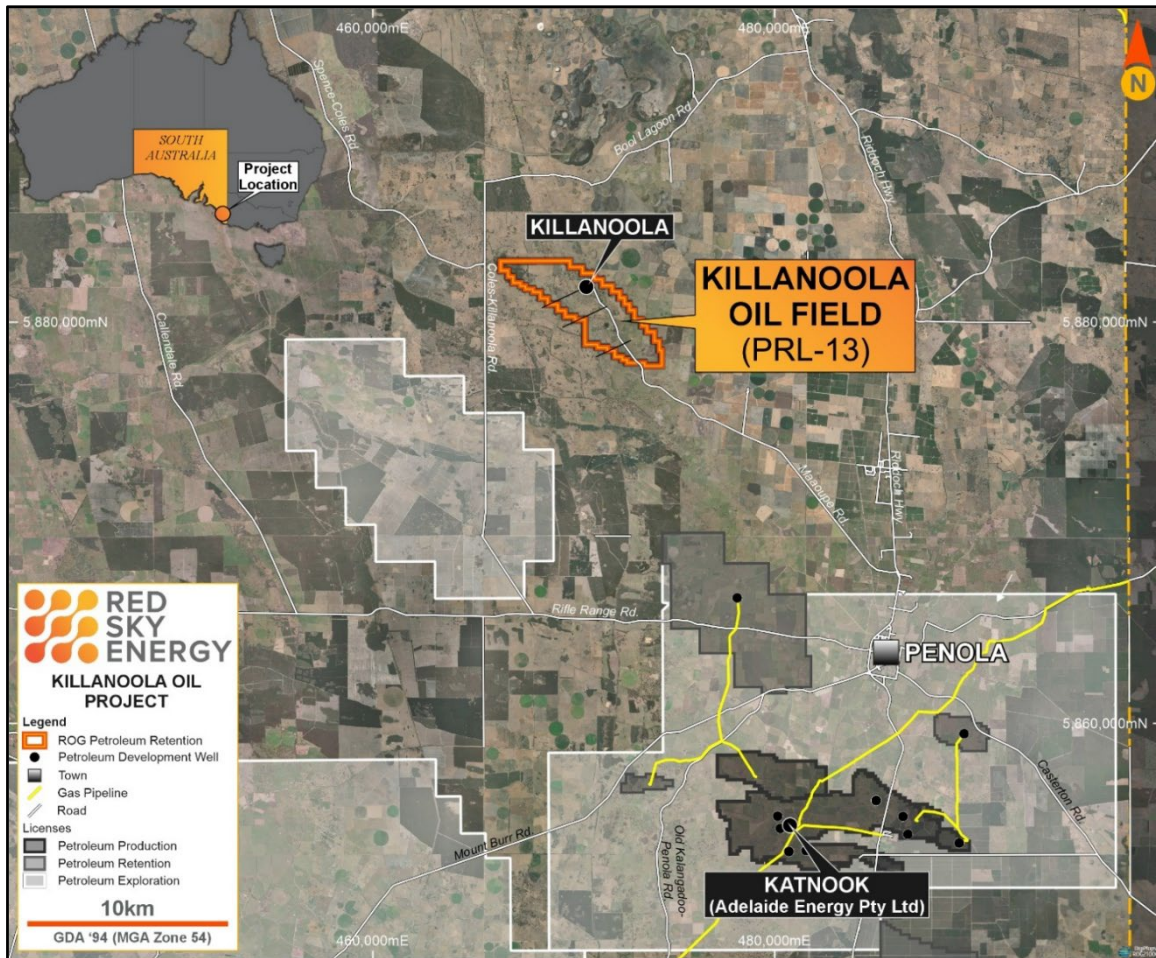

Table 1: Receipts summary for the March 2026 Quarter

DESCRIPTION	VOLUME	\$000's
Methane/Ethane GJs	72,800	994
LPG Tonnes	-	-
Condensate Bbls	1,041	100
TOTAL		1,094

3D SEISMIC AND DEVELOPMENT PLANNING

Interpretation of the 3D seismic dataset across PRLs 14 and 17 has been completed and continues to inform future development planning. The Yarrow and Willowie programs form part of a broader strategy to deliver incremental production from an established field environment with existing infrastructure.

KILLANOOLA OIL PROJECT (PRL-13, South Australia)

**Figure 4: Killanoola Oil Field (PRL-13) location map
(Adelaide Energy Pty Ltd is a subsidiary of Beach Energy Ltd (ASX:BPT))**

The Killanoola Oil Project is located within PRL 13 in South Australia’s Penola Trough. A 3D seismic program completed in 2023 resulted in a 46% uplift in the field’s Best Estimate Petroleum Initially In Place (PIIP) to 135.5 million barrels, with KN2 targeting a previously undrilled structural high identified from this dataset. (Refer Appendix 2 and [ASX Announcement 21 April 2023](#).)

Refer to Appendix 2 for a Summary of discovered Petroleum Initially In Place (PIIP) of the PRL-13 Killanoola Oil Field (100%).

KILLANOOLA-2 (KN2)

Following the completion of Killanoola-2 (KN2) drilling in the December quarter, the Company continues to evaluate completion and stimulation options and to discuss the way forward with farm-in partners. Red Sky completed drilling of the oil appraisal well to a total depth of 1,044 metres measured depth, without incident. KN2 intersected hydrocarbon-bearing zones within the Upper Sawpit Sandstone, although reservoir permeability remains low in its unstimulated state. KN2 was subsequently cased and suspended with production tubing installed, preserving the well as a potential future producer.

The Company is progressing planning for workover and testing activities at KN2 and DW1, subject to funding and scheduling. Killanoola remains a potential future production asset, with development decisions to be guided by technical and economic assessment.

BLOCK 6/24, ANGOLA

Block 6/24, located just 12 kilometres offshore in Angola’s Kwanza Basin, includes the Cegonha oil field, which has been [independently assessed by PetroAus](#) and carries a Net 2C Contingent Resource of 5.1 million barrels (MMbbl). Three additional prospects - IBIS, D2, and B2 - contribute a further 11.0 MMbbl in Net 2U Prospective Resources to Red Sky’s portfolio. Early seismic studies have also revealed potential pre-salt structures under the Ibis prospect.

Refer to Appendix 3 for Maiden resource estimates completed for Block 6/24, offshore Angola.

The project remains at a preparatory stage following execution of the Risk Service Contract. Red Sky retains a 35% participating interest alongside Sonangol (operator, 50%) and ACREP (15%).

The joint venture continues to progress preparatory workstreams, including the finalisation of joint venture documentation and the planning of future geological and geophysical studies, following the formal execution of the Risk Service Contract earlier in 2025.

Block 6/24 Ownership and Location

Sonangol E&P is the operator of the Block, with a 50% participating interest. Red Sky Energy holds a 35% participating interest, and ACREP holds a 15% interest. Block 6/24 is located 12 kilometres offshore, in water depths ranging from 70 to 80 metres. The Block is covered by seismic data and has shown significant oil discovery potential.

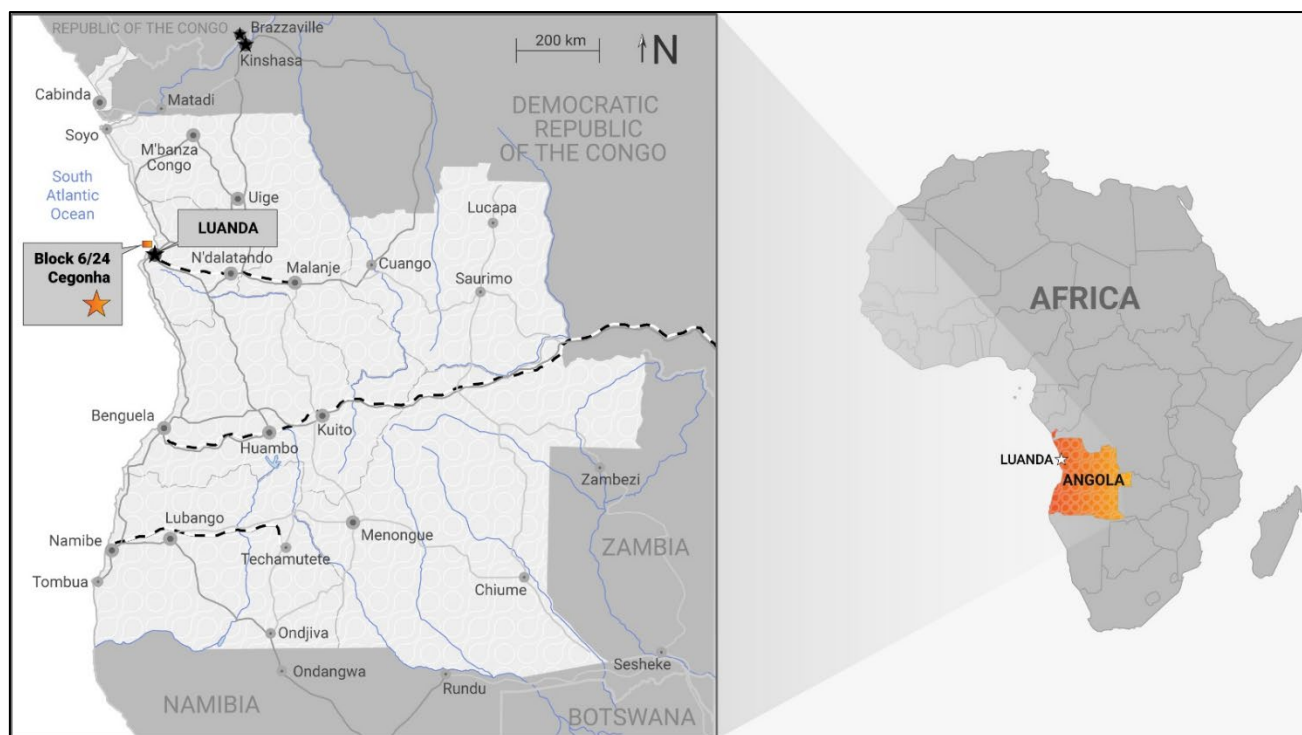

Figure 5: Angola location map with the approximate location of Block 6/24

OUTLOOK

At **Innamincka**, Red Sky is focused on executing its participation in the Santos-operated drilling program, including the Yarrow development wells and, subsequent to quarter end, the Willowie appraisal well. These activities are located within an established producing system and are intended to deliver incremental production and cashflow, subject to drilling outcomes. The Company's recent funding initiatives provide a pathway to participate in these programs while maintaining its 20% working interest.

At **Killanoola**, the Company will continue the technical evaluation of KN2 and workover planning to determine an appropriate development pathway while in discussions with farm-in partners.

Block 6/24 offshore Angola remains a longer-term opportunity, with ongoing preparatory workstreams.

CORPORATE

Placement and Rights Issue

On 31 March 2026, Red Sky announced firm commitments for a placement to raise \$1.0 million before costs through the issue of 1,000,000,000 new fully paid ordinary shares at an issue price of \$0.001 per share. The placement was structured in two tranches, with Tranche 1 comprising 800,000,000 shares under the Company's placement capacity and Tranche 2 comprising 200,000,000 shares relating to director participation, subject to shareholder approval. (Refer ASX Announcement [31 March 2026](#).)

In addition, the Company announced a proposed non-renounceable pro rata entitlement offer on the basis of two new shares for every three shares held by eligible shareholders at an issue price of \$0.001 per share, to raise up to approximately \$4.2 million before costs.

Funds from the Placement and Rights Issue are intended to be applied towards:

- Participation in three Santos-operated wells within the Innamincka Dome
- Workover and completion activities at the Killanoola Oil Project
- General working capital and costs of the capital raising

Participation ensures the Company maintains its 20% working interest in the Innamincka Dome licences.

The intended application of funds is indicative only and may be subject to change.

Post end of quarter, the Company announced execution of an underwriting agreement with CPS Capital Group Pty Ltd to fully underwrite the rights issue. Entities associated with Andrew Knox and Adrien Wing agreed to each sub-underwrite \$500,000, including take-up of entitlements. (Refer ASX Announcement [10 April 2026](#).)

Cost Reduction Program

Post end of quarter, Red Sky also announced an immediate cost reduction program focused on preserving capital and prioritising expenditure toward core development activities. As part of that initiative, the Managing Director and all Directors agreed to a 25% reduction in fees and salary. The Company also advised it had reduced staffing levels and was reviewing operating costs to maintain a disciplined cost base. (Refer ASX Announcement [10 April 2026](#).)

Cash position

The Company has cash reserves as at 31 March 2026 of \$2.07m. This cash position will be boosted by the recently announced placement and rights issue totalling approximately \$5.2 million.

Related party disclosure

In line with its obligations under ASX Listing Rule 5.3.5, Red Sky Energy Limited notes that the only payments to related parties of the Company, as advised in the Appendix 5B for the period ended 31 March 2026, pertain to payments to directors for fees, salary and superannuation.

Forward Looking Statements

Various statements in this report constitute statements relating to intentions, future acts and events. Such statements are generally classified as forward-looking statements and involve unknown risks, expectations, uncertainties and other important factors that could cause those future acts, events and circumstances to differ from the way or manner in which they are expressly or impliedly portrayed herein.

Some of the more important of these risks, expectations and uncertainties are pricing and production levels from the properties in which the Company has interests and the extent of the recoverable reserves at those properties. In addition, the Company has a number of exploration permits. Exploration for oil and gas is expensive, speculative and subject to a wide range of risks. Individual investors should consider these matters in light of the personal circumstances (including financial and taxation affairs) and seek professional advice from their accountant, lawyer or other professional advisor as to the suitability for them of an investment in the Company.

Notes

Methodology for Calculating discovered Petroleum Initially In Place

At its current stage of development, the Killanoola Oil project, in accordance with definitions established by the PRMS (2018), contains oil in the discovered Petroleum Initially In Place (PIIP) category. No greater levels of certainty have yet been established.

The discovered Petroleum Initially In Place is estimated deterministically by:

1. Extrapolating and analysing the estimated area and thickness of the structure. The boundaries to defining this volume are determined by the interpretation of the physical parameters of the top of the Sawpit Sandstone utilising seismic data,
2. Identifying the oil-water contact (OWC) identified in the wells drilled on the structure,
3. Estimating the net thickness of the oil column
4. Applying a porosity factor to obtain the potential total void space contained in that rock volume
5. Applying a generalised water saturation to the rock void volume.
6. The remaining porosity volume is then assumed to contain oil, which is then converted to barrels for ease of understanding.

Finally, to remain compliant with PRMS (2018) requirements and as a result of using the deterministic method, GRI used the Low/Best/High nomenclature to represent the discovered PIIP. These estimates were developed using various changes to the size of the structural compartments as interpreted.

Formula for Calculating PIIP

For undersaturated crude, the reservoir contains only connate water and oil with their respective solution gas contents. The initial or original oil in place can be estimated from the volumetric equation:

$$N = 7758 \times A \times h \times \phi \times (1 - S_w) / B_o$$

The constant 7,758 is the number of barrels in each acre-ft.

- Vb is bulk volume in acre-ft,
- ϕ is the porosity (ϕV_b is pore volume),
- S_{oi} is the initial oil saturation,
- B_{oi} is the initial oil formation volume factor in reservoir barrels per stock tank barrel.
- A is area in ft²,
- h is reservoir thickness in ft, and
- S_{wi} is the initial water saturation.

In addition to the uncertainty in determining the initial water saturation, the primary difficulty encountered in using the volumetric equation is assigning the appropriate porosity-feet, particularly in thick reservoirs with numerous non-productive intervals. One method is to prepare contour maps of porosity-feet that are then used to obtain a real extent. Another method is to prepare isopach maps of thickness and porosity from which average values of each can be obtained. Since recovery of the initial oil can only occur from permeable zones, a permeability cut-off determined by ResEval was used to obtain the net reservoir thickness. Intervals with permeabilities lower than the cut-off value are assumed to be non-productive. The absolute value of the cut-off will depend on the average or maximum permeability and can depend on the relationship between permeability and water saturation. A correlation between porosity and permeability is often used to determine a porosity cut-off. In cases in which reservoir cores have been analysed, the net pay can be obtained directly from the permeability data. This was not the case at any of the Killanoola wells as no cores were cut. When only logs are available, permeability will not be known; therefore, a porosity cut-off is used to select net pay. These procedures can be acceptable when a definite relationship exists between porosity and permeability.

Appendix 2

Summary of discovered Petroleum Initially In Place (PIIP) of the PRL-13 Killanoola Oil Field (100%)

Killanoola Oil Field	Discovered Petroleum Initially In Place (mmbbls)		
	Low	Best	High
31 March 2022	57.2	93.0	98.6
19 April 2023	28.9	135.5	157.4
% Increase	(49.5)%	45.7%	59.6%

The table above summarises the discovered petroleum initially in place of the Killanoola Oil Field as announced on [5 May 2022](#) and updated by GRI as at 19 April 2023. This evaluation was carried out in accordance with the Petroleum Resources Management System (PRMS) approved in 2018 by the Society of Petroleum Engineers, the World Petroleum Council, the American Association of Petroleum Geologists, and the Society of Petroleum Evaluation Engineers. The report was prepared and supervised by the Competent Person.

For the updated Independent Competent Person's Report (CPR), refer to: [Independent Competent Person's Report on the Discovered Petroleum Initially In Place \(PIIP\) in the Killanoola Oil Project, PRL-13, Penola Trough, South Australia \(19 April 2023\)](#)

Appendix 3

Total Petroleum Initially-In-Place (PIIP) and Resources Summary – Block6/24, Offshore Angola

Block 6/24 PIIP and Potential Contingent Resources as of 31 Mar 2025 (MMbbl)

	Discovered Petroleum Initially in Place MMBLS			Gross Contingent Resource MMBLS			Net Contingent Resource MMBLS		
	Low	Best	High	1C	2C	3C	1C	2C	3C
	59	100	161	6.2	14.6	30.9	2.17	5.10	10.82

Notes:

- The above volumes are “Unrisked” in the sense that “Chance of Development” has not been applied to the contingent resources.
- Gross contingent resources represent total technically recoverable hydrocarbon volumes by application of future development projects. Net Contingent Resources represent technically recoverable hydrocarbon volumes net to Red Sky Energy, which holds a 35% interest in Block 6/24.
- ASX Listing Rule 5.25.4 Statement: Red Sky Energy does not currently report petroleum reserves for Block 6/24. The Contingent and Prospective Resources reported herein are based on Total Petroleum Initially-In-Place (PIIP) estimates, which are unrisked and have not been adjusted for the chance of development or discovery, respectively. All estimates are reported in accordance with the 2018 PRMS and ASX Listing Rules Chapter 5.

Block 6/24 PIIP and Unrisked Prospective Resources as of 31 March 2025 (MMbbl)

Prospect	Undiscovered Petroleum Initially in Place MMBLS			Gross Prospective Resource MMBLS			Net Prospective Resource MMBLS			Pg	Pd
	Low	Best	High	1U	2U	3U	1U	2U	3U	%	%
IBIS	46	105	213	5.1	15.5	39.5	1.77	5.43	13.81	17	60
D2	46	99	196	4.5	14.7	36.5	1.59	5.15	12.77	20	60
B2	4	9	16	0.4	1.3	3.0	0.15	0.45	1.06	10	25

Notes:

- The estimated quantities of petroleum that may potentially be recovered by the application of future development project(s) relate to undiscovered accumulations. These estimates have both an associated risk of discovery, articulated via a Chance of Geological Discovery (Pg), and a risk of development in case of discovery, expressed via a Chance of Development (Pd). Further exploration, appraisal and evaluation is required to determine the existence of a significant quantity of potentially moveable hydrocarbons.
- Gross Prospective Resources represent total technically recoverable hydrocarbon volumes. Net Prospective Resources represent technically recoverable hydrocarbon volumes net to Red Sky Energy, which holds a 35% interest in Block 6/24.
- Low, Best and High recoverable volumes included in the table are unrisked, that is, before application of a Pg and Pd.

- *ASX Listing Rule 5.25.4 Statement: Red Sky Energy does not currently report petroleum reserves for Block 6/24. The potential Contingent and Prospective Resources reported herein are based on Total Petroleum Initially-In-Place (PIIP) estimates, which are unrisks and have not been adjusted for the chance of development or discovery, respectively. All estimates are reported in accordance with the 2018 PRMS and ASX Listing Rules Chapter 5.*

Definitions:

- **Contingent Resources** are those quantities of petroleum estimated, as of a given date, to be potentially recoverable from known accumulations by application of development projects, but which are not currently considered to be commercially recoverable owing to one or more contingencies.
- **Prospective Resources** are those quantities of petroleum that are estimated, as of a given date, to be potentially recoverable from undiscovered accumulations.
- **Total Petroleum Initially-In-Place (PIIP)** is all quantities of petroleum that are estimated to exist originally in naturally occurring accumulations, discovered and undiscovered, before production.
- **Discovered PIIP** is the quantity of petroleum that is estimated, as of a given date, to be contained in known accumulations before production.
- **Undiscovered PIIP** is that quantity of petroleum estimated, as of a given date, to be contained within accumulations yet to be discovered.
- **Chance of Geological Discovery (Pg)** is the estimated probability that exploration activities will confirm the existence of a significant accumulation of potentially recoverable petroleum.
- **Chance of Development (Pd)** The estimated probability that a known accumulation, once discovered, will be commercially developed.

Cautionary Statement

The estimated quantities of petroleum that may potentially be recovered by the application of a future development project(s) related to discovered accumulations. These estimates have an associated risk of development. Future appraisal and evaluation are required to determine the existence of a commercial quantity of potentially economically recoverable hydrocarbons.

Summary of Resource Estimation Procedures and Methods

PetroAus conducted an independent resource assessment for Block 6/24 (post-salt Catumbela reservoir only) and compiled the estimates shown above.

Analytical procedures, including volumetric analysis and analogues, were utilised for this assessment. Probabilistic method was applied to estimate potential contingent and prospective resources.

The potential contingent resources were estimated using volumetrics to obtain total PIIP and analogue recovery factors to obtain recoverable volumes, to which the net interest was applied. The 3D seismic data made available were interpreted to provide a gross rock volume (GRV) and structural uncertainty applied to generate a range of GRV. A petrophysical interpretation was carried out on the Cegonha-1 well to generate porosity, net-to-gross and oil saturation. Low, best, and high values for GRV, porosity, net-to-gross, saturation and recovery factor were combined probabilistically to obtain the total PIIP and contingent resource range.

The prospective resources were estimated using volumetrics to obtain total PIIP and analogue recovery factors to obtain recoverable volumes, to which the net interest was applied. The 3D seismic data made available were interpreted to provide a gross rock volume (GRV). A petrophysical interpretation was carried

out on the Cegonha-1 well to generate porosity, net-to-gross and oil saturation, which was used as an analogue input for volumetrics. Low, best, and high values for GRV were obtained by applying a range in oilwater-contacts, along with a range in porosity, net-to-gross, saturation and recovery factors to obtain probabilistic total PIP and prospective resource range.

Resource maturation plans

The key contingency that prevents the contingent resources from being classified as petroleum reserves is financial and technical appropriations sufficient to develop the recoverable hydrocarbon volume and can be addressed by further appraisal and evaluation of the Cegonha field. As with any proposed development plan, approval has to be sought from the regulator, this means a regulatory contingency also exists.

Future planned activities to mature the contingent resources, within an approximate time frame of 4 years, may include further evaluation of the Cegonha discovery, seismic studies in the Block, and the drilling of a new well in the Cegonha field to confirm commerciality.

Future activities to mature the prospective resources, within an approximate time frame of 4 years, may include geological and geophysical studies, seismic reprocessing, detailed subsurface evaluation, and drilling an exploration well to test the best prospect.

Consolidated statement of cash flows		Current quarter \$A'000	Year to date (3 months) \$A'000
4.5	Effect of movement in exchange rates on cash held		
4.6	Cash and cash equivalents at end of period	2,069	2,069

5.	Reconciliation of cash and cash equivalents at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts	Current quarter \$A'000	Previous quarter \$A'000
5.1	Bank balances	264	584
5.2	Call deposits	1,805	1,122
5.3	Bank overdrafts		
5.4	Other		
5.5	Cash and cash equivalents at end of quarter (should equal item 4.6 above)	2,069	1,706

6.	Payments to related parties of the entity and their associates	Current quarter \$A'000
6.1	Aggregate amount of payments to related parties and their associates included in item 1	116
6.2	Aggregate amount of payments to related parties and their associates included in item 2	66

Payments in 6.1 relate to Director salaries and company secretary consulting services.
Payments in 6.2 relate to a portion of the Managing Director salary.

Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments.

7. Financing facilities <i>Note: the term "facility" includes all forms of financing arrangements available to the entity. Add notes as necessary for an understanding of the sources of finance available to the entity.</i>	Total facility amount at quarter end \$A'000	Amount drawn at quarter end \$A'000
7.1 Loan facilities		
7.2 Credit standby arrangements		
7.3 Other (insurance funding)		
7.4 Total financing facilities		
7.5 Unused financing facilities available at quarter end		
7.6 Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.		

8. Estimated cash available for future operating activities	\$A'000
8.1 Net cash from / (used in) operating activities (item 1.9)	623
8.2 (Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(255)
8.3 Total relevant outgoings (item 8.1 + item 8.2)	368
8.4 Cash and cash equivalents at quarter end (item 4.6)	2,069
8.5 Unused finance facilities available at quarter end (item 7.5)	-
8.6 Total available funding (item 8.4 + item 8.5)	2,069
8.7 Estimated quarters of funding available (item 8.6 divided by item 8.3)	N/A
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: n/a	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: n/a	

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer: n/a

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

Authorised by:Board of Directors.....

(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
