

ASX ANNOUNCEMENT

29 April 2026

QUARTERLY ACTIVITIES REPORT – MARCH 2026

HIGHLIGHTS

- **12ktpa project development and DFS works progressing toward FID stage for the Rincon Lithium Project**
- **40MW energy infrastructure works to power Rincon Lithium Project progressing toward procurement and construction readiness stage**
- **Forecast international lithium demand growth strengthens via surge in EV and BESS - being very supportive for development of Argosy's Rincon Project**
- **Strong financial position with cash reserves of ~\$3.6 million at 31 March 2026**

Argosy Minerals Limited ("Argosy" or the "Company") continued development works at the Rincon Lithium Project ("Rincon") in Argentina, and owns the Tonopah Lithium Project in Nevada, USA, achieving significant milestones at Rincon during the Quarter.

Rincon Lithium Project – Argentina (77.5% JV interest, earning up to 90%)

The Rincon Lithium Project is the flagship asset in Argosy's lithium development strategy, located within the Salar del Rincon in Salta Province, Argentina, with a well-defined pathway toward commercial production of battery quality lithium carbonate product. The Company is committed to developing the 12ktpa project, utilising engineering service providers and consultants to conduct the engineering and feasibility works to deliver the Definitive Feasibility Study and Front-End Engineering Design.

12ktpa Project Engineering & Feasibility Works

The Company has achieved significant progress across key workstreams for the development of the 12ktpa Rincon Lithium Project and continues its key engineering and feasibility works phase to advance methodically toward completing the Definitive Feasibility Study (DFS).

The 12ktpa Stage 1a feasibility phase works focus on production of solid lithium chloride product on site, where production of this intermediate product at Rincon offering significant advantages through lower upfront capital intensity, simplified processing, reduced operational risk, development flexibility and overall project de-risking.

The process design program is nearing completion following systematic evaluation and design refinement works, conducted in conjunction with our international lithium process consultant. The critical flowsheet and technology selection process is being optimised and is undergoing validation through comprehensive test work programs, which have proved positive to date.

The testworks have provided strong validation of the process flowsheet's capability and provide increased confidence in the robustness of the underlying process design, which will define the key operating and economic parameters that will be incorporated into the DFS.

ASX ANNOUNCEMENT

Successful completion will allow the Company to further enhance project execution schedules and project cost estimates for the 12ktpa project.

The testwork validation and performance works are being conducted to define an optimised path to complete the DFS, reduce technology risk and provide surety to stakeholders that the Rincon Project can be constructed and operated profitably.

The Company will then advance with Stage 1b feasibility works to evaluate downstream processing of the solid lithium chloride product into battery quality lithium carbonate or hydroxide product, or determine viability of directly exporting the high purity solid lithium chloride product.

The process flowsheet together with a sequenced project development strategy provides a clear and scalable pathway from raw lithium brine through to solid lithium chloride product and ultimately to battery quality lithium carbonate or hydroxide product.

Figure 1. Rincon Lithium Project – Process Flowsheet

40MW Energy Infrastructure Access

The Company's executed agreement with Salta Electricity Distribution Company S.A. (EDESA), the leading electricity distributor in the Province of Salta, resulted in EDESA completing detailed engineering and feasibility works for energy infrastructure capable of delivering up to 40MW to the Rincon Project.

EDESA's completed works confirmed both the technical feasibility and commercial viability of securing a stable and reliable energy supply for the 12ktpa Rincon facility, a key milestone in meeting one of the project's most critical infrastructure requirements.

A Medium Voltage Line (MVL) will provide a reliable 33kV connection from the 500kV Argentina National Grid to the Rincon site, via an ~8.6 km transmission line, delivering a secure, stable and sustainable power supply platform to underpin long-term operations.

Access to reliable, grid-based power is expected to reduce operational costs, strengthen project economics.

Lycopodium has been engaged as "Owner's" Electrical Engineer to progress the project from design through construction. Their works have comprised reviewing EDESA's design deliverables to progress toward technical definition for procurement and construction readiness.

Further, the Company is engaging with local renewable energy providers to establish Power Purchase Agreements (PPA's) to ensure sustainable and cost-efficient energy supply,

ASX ANNOUNCEMENT

positioning the Rincon Project as a high-quality, low-carbon lithium asset aligned with Argentina's renewable energy transition.

Delivering this energy infrastructure to the Rincon Project will provide a major advantage - minimising future project development capex and opex, noting access to energy is the key barrier for entry to many lithium projects in the NW region of Argentina, where such infrastructure and access to grid power is lacking.

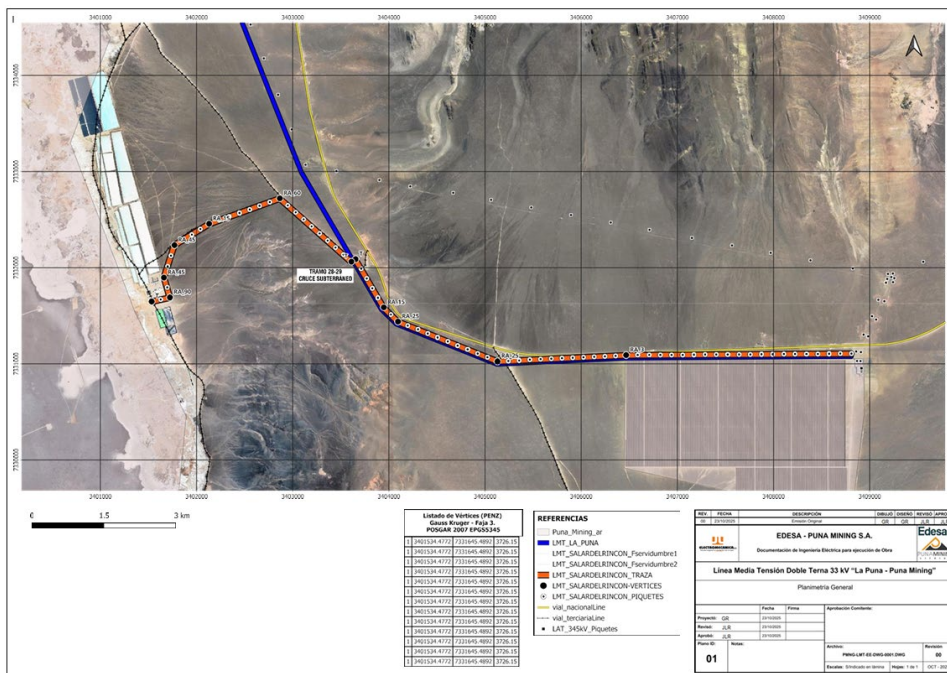

Figure 2. Rincon Lithium Project – Medium Voltage Line Project

This energy infrastructure program is being conducted in alignment with the neighbouring Rio Tinto Rincon Project, where similar works are being arranged for Rio Tinto to access energy via the same EDESA infrastructure program. Ultimately, it is envisaged that both companies will build electric transmission lines in parallel to connect to the Altiplano sub-station site and onto the National Power Grid.

12ktpa Project Funding

The Company continues to assess and review opportunities for strategic arrangements, off-take opportunities, funding options and/or investment support to develop the 12ktpa project.

The Company is also re-engaging with Export Credit Agencies (ECA), noting the recent ECA funding package announced for Rio Tinto's Rincon Project. Recent preliminary discussions have proved positive, with interest from various ECA groups. The Company believes it will satisfy ECA funding requirements, noting the DFS works and product off-take arrangements are progressing and are being tailored to align with such ECA requirements.

The Company's development status, including completing the DFS, the strategic 40MW energy infrastructure access, and receipt of government regulatory approval for the

ASX ANNOUNCEMENT

development of a 12,000tpa project, continue to prove advantageous for the funding process and firming interest for a finance/investment solution.

Lithium Carbonate Demonstration Facility

The Company's demonstration facility operations remain suspended, with plant and equipment preservation works being conducted during the quarter.

The Company notes the recent lithium price increase and potential effect to reassess the demonstration facility operation, however upon review, has prioritised completing the DFS works for the 12ktpa project development, and notes this pathway provides the best value upside for the Company and believes is the preferred strategy to develop and secure funding for our project.

With rising lithium market sentiment, the Company is committed to exploiting its Rincon Project.

Tonopah Lithium Project – Nevada, USA (100% interest)

The Company's highly prospective Tonopah Lithium Project is strategically located near Albemarle's Silver Peak operation in Nevada, USA. With lithium sentiment and forecast lithium demand continuing to increase, and the significance of US government support initiatives to produce and procure local strategic and critical minerals, Argosy will assess its strategy to determine the best development pathway to evaluate the lithium brine potential and increase the value proposition of its Tonopah Lithium Project.

Lithium Market Update

Lithium carbonate prices maintained their uplifted levels during the quarter, continuing to reflect tight inventories, supply disruptions and policy optimism, with Benchmark Mineral Intelligence (BMI) stating CIF Asia lithium carbonate spot assessment ended Q1 up ~51%. SMM's battery-grade lithium carbonate price was quoted at US\$22,341/t (ex-VAT) (on 24 April 2026).

China is also a significant factor on international lithium prices, with recent Chinese lithium prices extending their recent rally to 73,000 yuan/tonne (per SMM battery-grade lithium carbonate price), supported by bullish market sentiment amid persistently tight feedstock supply and expectations of robust downstream demand, and supported by ongoing supply-side disruptions underpinning prices.

The main drivers of the lithium price recovery include that lithium inventory levels were drawn down consistently through the second half of 2025 and didn't rebuild as much as expected into 2026, per BMI reporting. Furthermore, lithium demand growth is becoming more diversified, with energy storage systems emerging as a fast-growing second pillar of battery demand, potentially tightening the market faster than expected.

In addition, lithium supply is proving more sensitive to regulatory and permitting outcomes than the surplus narrative implies. In China, permit cleanups and uncertainty around mine resumptions have become bellwethers of market psychology.

ASX ANNOUNCEMENT

The lithium market has become more responsive, with the strategic bid rising. The United States has explicitly framed processed critical minerals as a national security issue under Section 232, while broader stockpiling initiatives and the concept of a lithium strategic reserve are increasingly part of the policy discourse.

The EV market is still a major influence on lithium prices, with prices softening at times during the quarter when weaker EV signals weighed on markets, which were largely driven by falling consumer confidence, market saturation/reintroduction of sales taxes in China, and a stagnant US EV market due to changes in government policy.

However, recent higher fuel prices resulting from the current Iran conflict has seen recent EV sales recover strongly in China and across international markets, with YTD Chinese EV exports annualising at a 46% YoY increase. Industry analysts have reported a possible precedent for a structural shift in the auto industry as a result of oil shocks.

Reuters reported higher US fuel prices have already boosted interest in EVs, with US sales of used EV's posting strong growth so far in 2026 and new EV sales hitting multi-month highs in March, with increasing EV sales in Europe also due to higher fuel prices.

Corporate Social Responsibility Programme (CSR)

The Company has undertaken broad range CSR initiatives within the Salta Province and reinforced its CSR strategies with a focus on local communities in the Puna region. It remains committed to supporting local communities through jobs, training, procuring goods and services locally (where possible) as it progresses project development.

Argosy is proud of its valuable contribution through its CSR programme and will continue supporting local communities in developing a sustainable economic environment with sustaining benefits. The Company is privileged to have the support of its local communities, who strongly support the long-term sustainability of our project.

Corporate

The Company is in a strong financial position with cash reserves of ~\$3.6 million at 31 March 2026.

The Company has continued its cost reduction measures where possible, and has also secured revenue opportunities related to the project, including recent product sales, plant/equipment/asset sales to minimise net expenditure and to preserve funds.

During the Quarter, expenditure of approximately \$184,000 was provided to Puna Mining to fund expenditure for the Rincon Lithium Project, and an additional \$278,000 was incurred directly by the Company for on-going development works at the Rincon Lithium Project (as per ASX Listing Rule 5.3.2).

Exploration and evaluation expenditure conducted during the Quarter was nil (as per ASX Listing Rule 5.3.1).

As outlined in the attached Appendix 5B (section 6.1 and 6.2), during the Quarter, approximately \$167,000 and \$52,000 in payments were made to related parties and their

ASX ANNOUNCEMENT

associates, for director fees, consultancy fees, superannuation, accountant and company secretarial related services (as per ASX Listing Rule 5.3.5).

Mr Peter De Leo resigned as Non-Executive Director of the Company during the quarter.

Schedule of Tenements

The schedule of tenements held by the Company at the end of the Quarter is shown below. No tenements were acquired or disposed during the Quarter.

Tenement	Location	Beneficial Percentage held

Cautionary Statements: Argosy confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement and, in the case of Mineral Resources or Ore Reserves, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. Argosy confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Forward Looking Statements: Statements regarding plans with respect to the Company's mineral properties are forward looking statements. There can be no assurance that the Company's plans for development of its mineral properties will proceed as expected. There can be no assurance that the Company will be able to confirm the presence of mineral deposits, that any mineralisation will prove to be economic or that a mine will successfully be developed on any of the Company's mineral properties.

Competent Person's Statement – Rincon Lithium Project

The information contained in this ASX release relating to Exploration Targets, Exploration Results and Mineral Resource Estimates has been prepared by Mr Duncan Storey. Mr Storey is a Hydrogeologist, a Chartered Geologist and Fellow of the Geological Society of London (an RPO under JORC 2012). Mr Storey has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a competent person as defined in the 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves.

Duncan Storey is an employee of AQ2 Pty Ltd and an independent consultant to Argosy Minerals Ltd. Mr Storey consents to the inclusion in this announcement of this information in the form and context in which it appears. The information in this announcement is an accurate representation of the available data from exploration at the Rincon Lithium Project.

Chemical Engineer's Statement: The information in this announcement that relates to lithium carbonate processing is based on information compiled and/or reviewed by Mr Pablo Alurralde. Mr Alurralde is the President of Puna Mining S.A. and consents to the inclusion in this announcement of this information in the form and context in which it appears. Mr Alurralde is a chemical engineer with a degree in Chemical Engineering from Salta National University in Argentina. Mr Alurralde has sufficient experience which is relevant to the lithium carbonate and lithium hydroxide processing and testing undertaken to evaluate the data presented.

Cautionary Note: A Production Target is a projected estimate of potentially mineable mineralised material based on the application of modifying factors. The process and assumptions used to establish the Production Targets for Argosy's operations and development projects are those used to prepare the Mineral Resource Estimate announced on 15 January 2024 and upgraded on 12 November 2024 (which are available at www.argosyminerals.com.au and www.asx.com.au). Production Targets are derived from Measured,

ASX ANNOUNCEMENT

Indicated and Inferred Mineral Resource classifications. The Company has been guided by ASX Listing Rules Chapter 5.16 to 5.19 for the preparation of Production Targets.

The Company confirms that all the material assumptions underpinning the production target in the ASX announcement "Updated - Dynamic Modelling Produces Outstanding Results for Rincon Lithium Project" dated 12 April 2024 continue to apply and have not materially changed.

The Company highlights the following cautionary note in relation to confidence in the estimation of Production Targets that incorporate Mineral Resources from the Inferred classification:

There is a low level of geological confidence associated with Inferred Mineral Resources and there is no certainty that further exploration work will result in the determination of Indicated Mineral Resources or that the Production Target itself will be realised. The stated Production Targets are based on the Company's current expectations of future results and events and should not be solely relied upon by investors when making investment decisions.

The estimated Mineral Resource Estimate that underpins the Production Targets have been prepared by Competent Persons in accordance with ASX Listing Rules Appendix 5A. The Inferred portion of the Production Targets is not the determining factor in each mine's viability and does not feature as a significant proportion early in the mine plan.

Argosy has independently engaged the services of AQ2 Pty Ltd to conduct the mineral resource estimation works, hydrogeological modelling and associated brine analysis works for the potential development of a lithium carbonate production operation at the Rincon Lithium Project. Argosy has previously engaged Primero Group to assess the technical and economic viability to a Preliminary Economic Assessment level with regards to producing lithium carbonate at the Project. Whilst the current modelling works have yielded robust outcomes and provided independent perspective on the opportunity to produce lithium carbonate, there is no guarantee that Argosy will choose to adopt the outcomes of the works conducted.

ASX Listing Rules Compliance

The Mineral Resources information contained in this ASX release is extracted from the report entitled "Updated: Rincon Lithium Project JORC Mineral Resource Upgrade & Exploration Target" dated 12 November 2024, available at www.argosyminerals.com.au and www.asx.com. Argosy confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement and, in the case of Mineral Resources or Ore Reserves, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. Argosy confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Argosy advises references to the Company's current target of producing 2,000tpa of battery quality lithium carbonate product at the Rincon Lithium Project should be read subject to and clarified by the Company's current intention that, subject to feasibility, finance, market conditions and completion of development works at the Rincon Lithium Project, the 2,000tpa production target is intended to form a modular part of the 10,000tpa operation from its commencement.

Argosy further advises that references in this ASX release in relation to the 10,000tpa production target are extracted from the report entitled "Argosy delivers exceptional PEA results for Rincon Project" dated 28 November 2018, available at www.argosyminerals.com.au and www.asx.com. Argosy confirms that it is not aware of any new information or data that materially affects the information included in the Announcement and, in the case of the Production Target, Mineral Resources or Ore Reserves contained in the Announcement, that all material assumptions and technical parameters underpinning the estimates in the PEA announcement continue to apply and have not materially changed. Argosy confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the PEA announcement.

28th Nov 2018 – Argosy delivers exceptional PEA results for Rincon Project

ABOUT ARGOSY MINERALS LIMITED

Argosy Minerals Limited (ASX: AGY) is an Australian company with a current 77.5% (and ultimate 90%) interest in the Rincon Lithium Project in Salta Province, Argentina and a 100% interest in the Tonopah Lithium Project in Nevada, USA.

The Company is focused on its flagship Rincon Lithium Project – potentially a game-changing proposition given its location within the world renowned “Lithium Triangle” – host to the world’s largest lithium resources, and its fast-track development strategy toward production of LCE product.

Argosy is committed to building a sustainable lithium production company, highly leveraged to the forecast growth in the lithium-ion battery sector.

	N/A		

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

8. Estimated cash available for future operating activities	\$A'000
8.1 Net cash from / (used in) operating activities (item 1.9)	(195)
8.2 (Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	-
8.3 Total relevant outgoings (item 8.1 + item 8.2)	(195)
8.4 Cash and cash equivalents at quarter end (item 4.6)	3,567
8.5 Unused finance facilities available at quarter end (item 7.5)	-
8.6 Total available funding (item 8.4 + item 8.5)	3,567
8.7 Estimated quarters of funding available (item 8.6 divided by item 8.3)	18
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: N/A	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: N/A	
8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?	
Answer: N/A	
<i>Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.</i>

(Name of body or officer authorising release – see note 4)

Notes

- This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
