About Ronin Resources Ltd

Ronin Resources Limited (ASX: RON) is an ASX listed company focused on the evaluation and assessment of the Vetas, the Hornby Lake Lithium and the La Punilla Projects located in Colombia, Ontario Bay, Canada and Argentina respectively and 100% owned by Ronin. The Company also seeks to evaluate and assess complementary new business opportunities capable of delivering shareholder returns.

ASX Announcement

29 April 2026

March 2026 Quarterly Activities Report and Appendix 5B

- Continued exploration work at the Company's 100% owned La Punilla gold-silver project located in San Juan, Argentina.
- Rock chip sampling and extensive mapping conducted by 5 geologists and field assistants. Rock chip assays pending.
- Drone-based high-resolution aeromagnetic survey completed.
- The Company remains actively engaged in the evaluation and assessment of complementary acquisition opportunities.
- Cash reserves of \$2.895m as at 31 March 2026.

Ronin Resources Ltd (ASX: RON) (Ronin or the Company) provides the following report and attached Appendix 5B to its shareholders for the quarter ending 31 March 2026.

The Company's primary activities during the quarter were to advance exploration at its 100% owned La Punilla gold-silver project located in the San Juan region in Argentina, and continue to look for and assessment commentary value accretive acquisition opportunities.

La Punilla gold-silver project, San Juan, Argentina

Geological mapping and rock-chip sampling completed during the quarter focussed on detailed follow-up mapping and sampling of the Quebrada Palca colour anomaly and initial sampling of several anomalies that have been identified by Sentinel 2 satellite data. The existence of ammonium-bearing muscovite and illite at Quedraba Palca and at MTMF anomaly 3 (~6 km distance) suggests affinities between widely separated exposures of altered rocks, such as those might be expected in a porphyry environment. This hypothesis is further supported by broad similarities in other aspects of the alteration in the examined anomalies, such as the presence of silicification, quartz veining, illite/muscovite and pyrite. Kaolinite was also common in some of the anomalies, possibly formed as a result of reaction between wall rock and acidic fluids generated pyrite weathering, alternatively it could have formed during of an argillic alteration overprinting event.

All rock chip samples have been transported to ALS Mendoza, and assay results are expected shortly.

Figure 1: Map showing work undertaken in January 2026, new sample locations shown with grey squares and MTMF anomalies by magenta-coloured polygons. Blue lines represent observed or interpreted faults.

Drone-Based Aeromagnetic Survey

During the quarter a drone-based aeromagnetic survey was conducted by local Argentinian geological contractor, DAMS Geophysics, to test the potential depth of the mineralization. This data will allow the refinement of the exploration strategy and define new targets for further sampling and eventual drilling.

The Company expects to receive the results of the rock chip sampling and aeromagnetic survey shortly. Subject to receipt and analysis of these results, the Company intends to make plans for a follow-up campaign to sample the remaining anomalies, potential geophysical targets and sample the previous campaign's anomalies in more detail.

Acquisition Opportunities

As noted in the Company's 19 February 2026 ASX announcement, Ronin was in early-stage discussions with respect to acquiring an interest in an early-stage copper-gold project located in Argentina. Commercial terms between the parties could not be agreed, and discussions between the parties ceased. The Company remains actively involved in seeking and assessing complementary and value accretive acquisition opportunities and will update the market in accordance with its continuous disclosure obligations.

Appendix 5B related party payments
