

ASX ANNOUNCEMENT

30 April 2026

QUARTERLY ACTIVITIES REPORT

For the period ending 31 March 2026

Highlights

- Completed an equity raise for approximately US\$50 million (A\$72 million) with participation from new and existing shareholders, including high quality offshore and domestic institutions.
- Company in a strong financial position through completion of the Strategic Partnering Process, a Final Investment Decision and Early Construction Works
- The U.S. District Court for the District of Nevada upheld the federal permit for Rhyolite Ridge.
- Issued the Technical Report under Subpart 1300 of the U.S. Securities and Exchange Regulations S-K, incorporating the materially improved project economics due to reduction in leach duration.
- Ongoing engagement with U.S. Government and potential strategic partners.

30 April 2026 – Loneer Ltd (“Loneer” or the “Company”) (ASX: INR, Nasdaq: IONR), an emerging lithium-boron supplier, is pleased to report on its activities for the quarter ending 31 March 2026 (the “**March 2026 Quarter**”) and provide an update on the development of its 100%-owned Rhyolite Ridge Lithium-Boron Project (“**Rhyolite Ridge**” or the “**Project**”).

Bernard Rowe, Loneer’s Managing Director, said, “*Our successful capital raise combined with Rhyolite Ridge’s fully permitted and shovel-ready status continues to position Loneer favourably for the future. We are intensely focused on concluding the strategic partnering process and advancing our unique project to a positive Final Investment Decision.*”

Equity financing completed for US\$50 million (\$A72 million)

In February 2026, Loneer issued 400,000,000 fully paid ordinary shares (“New Shares”) at an issue price of A\$0.18 (~US\$0.13) per New Share for gross proceeds of A\$72 million (approximately US\$50 million) (the “Placement”). New and existing shareholders strongly supported the Placement, reflecting the world class nature of the Rhyolite Ridge Lithium-Boron Project (the “Project” or “Rhyolite Ridge”).

The Placement proceeds will primarily be used to accelerate the development of the Rhyolite Ridge project for:

- Long lead items and early works;

- Advance project readiness;
- Fund environmental permitting expenses and commitments;
- Pay other Project costs; and
- Fund working capital, obligations under the closed DOE loan and general corporate purposes.

Government and Strategic Partner Engagement

In June 2025, Ioneer launched a formal strategic partnering process to identify a strong equity partner to help accelerate the development of Rhyolite Ridge and advance the Project into production. In late 2025, the company's partnering strategy evolved in response to several catalysts including U.S. Government support for other domestic critical minerals projects, trade negotiations with key allied countries including Korea and Japan and the inclusion of boron on the critical minerals list. A consortium approach is a more likely outcome as opposed to a single strategic partner.

Ioneer is in active discussions with multiple parties and the process is expected to conclude by the end of the June quarter. Goldman Sachs & Co. LLC is assisting Ioneer with the strategic partnering process.

Rhyolite Ridge Permitting

The Bureau of Land Management ("BLM") issued a favourable Record of Decision ("ROD") on 24 October 2024, authorizing the Plan of Operations and completing the National Environmental Policy Act ("NEPA") process.

In October 2024, three non-governmental organizations (Center for Biological Diversity, Great Basin Resource Watch and Western Shoshone Defense Project) (collectively, the "Plaintiffs") filed a federal lawsuit against the BLM decision.

On 31 March 2026, The U.S. District Court for the District of Nevada ("U.S. District Court") issued its decision in this lawsuit, upholding the BLM decision to issue the ROD. The Court found that the BLM and U.S. Fish and Wildlife Service complied with the Endangered Species Act, Federal Land Policy and Management Act, and National Environmental Policy Act in their review and approval of the Project.

On 9 April 2026, the Plaintiffs filed a notice of appeal of the U.S. District Court's decision to the United States Court of Appeals for the Ninth Circuit. The timing of the process is outside of the Company's control, a decision is anticipated in mid-2027. The appeal is not expected to delay commencement of construction.

Sales & Marketing

Lithium Market and Price

Lithium markets have strengthened materially from last year, with industry data and analysis indicating a demand recovery led by stationary energy storage. Demand for battery energy storage systems has continued to rise rapidly, driven by improved economics for load shifting, growing data centre power needs, and broader demand for behind-the-meter industrial-scale energy solutions.

Entering 2026, Year-over-year global electric vehicle demand growth remained pressured by government policy shifts in China and the United States, as well as weaker consumer confidence. However, geopolitical events in the Middle East have renewed focus on energy prices and energy security, contributing to increased order activity exiting the quarter. These demand trends, combined with supply disruptions in China and Zimbabwe, suggest a much-improved environment for lithium supply growth.

Analysts are reconsidering long-held pessimism regarding lithium market imbalances and are increasingly focused on potential shortages around the expected start of Rhyolite Ridge production. These factors have improved long-term product price expectations and support our efforts to attract strategic equity partners to the Project.

Based on Fastmarkets spot prices, the median CIF Asia prices as of 31 March 2026, for battery-grade lithium carbonate and hydroxide were US\$21,000/tonne and US\$20,250/tonne, respectively.

Boric Acid Market and Price

Boric acid demand is expected to continue to grow, driven by strong demand from the consumer electronics sector (Thin Film Transistor display glass substrates), the military (ferroboron and boron carbide), and the construction industry (insulation and ceramics). China, the largest boron consumer and net importer, with approximately a 50% share, continued to grow imports in January and February, totalling 53,462 tonnes compared with 50,086 tonnes in the same period in the prior year, representing 6.7% growth.

The boric acid price has been stable, with average Asian and US prices slightly higher, as Rio Tinto price increases have offset Eti Maden's slight price reductions and gains in market share in China.

Environmental, Health, Safety & Sustainability (EHSS) Program

Environmental Regulatory Compliance

Ioneer continues to maintain compliance with the issued State of Nevada Water Pollution Control Permit, Class 2 Air Permit and newly acquired State Reclamation permit. No compliance issues were noted during the March 2026 Quarter and Ioneer continues to report ongoing monitoring and compliance related activities as required under these obligations.

Health & Safety

During the quarter, Ioneer reported no lost time incidents, first aid incidents, or fatalities for Ioneer employees.

Tiehm's buckwheat

Tiehm's buckwheat conservation efforts continued at the Company's dedicated greenhouse in Nevada. Efforts focused on the germination and propagation of new seedlings and supporting the flowering and pollination of existing plants. The Company continues to demonstrate the ability to grow and reproduce Tiehm's buckwheat from seed in a variety of soil types, including soils that are low in both lithium and boron.

The Company's greenhouse operates as a foundational component of Ioneer's Tiehm's buckwheat conservation efforts. During the quarter, activities focused on enhancing data collection initiatives and maximizing available space for plant growth and seed production. Ioneer continues to work closely with the BLM and the U.S. Fish and

Wildlife Service (“USFWS”) to finalize the Tiehm’s buckwheat Applicant-Proposed Conservation Measure protocol and procedure documents, as outlined in the BLM Record of Decision and the USFWS Biological Opinion.

During the quarter, Ioneer worked with relevant U.S. agencies to prioritize required studies and approvals for the Tiehm’s Buckwheat Introduction Program. This program will introduce experimental populations of Tiehm’s buckwheat on public lands outside the Rhyolite Ridge Project area.

Initial plantings of Tiehm’s buckwheat are scheduled to commence in Spring 2026, followed by Fall and Spring planting programs for the next five to 10 years. These efforts are intended to support the establishment of self-sustaining populations and to enhance redundancy, representation, and resilience of the species.

Community & Tribal Nations

Ioneer continues to engage with local communities and Tribal Nations to address any environmental and social concerns and enhance local economic opportunities. In January, the Company was pleased to host a Community Meeting in Fish Lake Valley, Nevada. Ioneer’s Managing Director and other members of the Ioneer management team provided an update on the Rhyolite Ridge Project and heard directly from local stakeholders. We continue to incorporate feedback to help ensure the community maximizes the benefits from the project.

Engineering

An updated technical report under Subpart 1300 of the U.S. Securities and Exchange Regulation S-K incorporating the impact of the reduced leach duration to 1.5 days was completed and filed by the Company on 29 April 2026 (per company announcement dated 28 October 2025).

Ioneer is preparing a pre-feasibility study for a battery-grade lithium carbonate (Li_2CO_3) circuit to evaluate potential production of battery grade Li_2CO_3 . This work is in addition to currently planned production of technical grade Li_2CO_3 and lithium hydroxide. The battery grade Li_2CO_3 pre-feasibility study is planned to be completed by the end of Q2 2026.

Organic Growth Projects

EcoPro Lithium Clay Project

EcoPro completed its Lithium Clay Research & Development project at the end of December 2026. A project report is being prepared.

Boron Carbide

Ioneer has engaged Fluor Corporation to prepare a pre-feasibility study to evaluate the feasibility of building a plant to produce defence-grade boron carbide from boron produced at Rhyolite Ridge. The pre-feasibility study is planned to be completed by the end of Q2 2026.

Corporate Activities

Change in Financial Year End and Annual General Meeting

The Company has completed the transition of its financial year from 30 June year-end to 31 December year-end. The Annual General Meeting for the transition period of 1 July 2025 to 31 December 2025, will be held on 21 May 2026. Additional details on the Annual General Meeting may be found on the Company's website at www.ioneer.com.

Update to Estimated Project Timeline

Ioneer's estimated timing* for Rhyolite Ridge is as follows:

Milestone	Targeted timing*	Note
Targeted completion of Strategic Partner process	H1 2026	The strategic partnering process is ongoing.
Targeted Final Investment Decision	TBA	Dependent on outcomes of Strategic Partnering Process and requirement to refresh Project economics.
Construction	Circa 36 months	Includes supply of long-lead items and construction. Subject to lead times and when orders are placed.

*As of the date of this quarterly, and subject to change.

Upcoming Work Program

The work program over the coming months includes:

- Complete the strategic partnering process for the Rhyolite Ridge Project
- Make a Final Investment Decision (FID)
- Prepare for commencement of construction

ASX Additional Information

The Company provides the following information pursuant to ASX Listing Rule requirements.

1. **ASX LR 5.3.1:** Exploration and Evaluation Expenditure during the quarter was US\$2.05 million. Details of the exploration activity are set out in this report. A breakdown of the expenditure is shown below:

Expenditure	US\$'000
Exploration	0
Engineering	950
Environmental	447

Sales & Marketing	171
Other	483
Total	2,051

2. **ASX LR 5.3.2:** The Company confirms there were no production or development activities during the quarter.
3. **ASX LR 5.3.5:** Related party payments for the quarter totalled US\$275,177 comprising salaries and fees for the Company's executive and non-executive directors. No other payments were made to any related parties of the entity or their associates.
4. **ASX LR 5.3.3:** INR confirms that it has not acquired tenements during the quarter (see Appendix 1).

Capital Structure

Total cash and cash equivalents as of 31 March 2026, was US\$43.99 million of which 82.5% was held in USD with the balance held in AUD.

At the end of the quarter, Ioneer had on issue:

- 3.03 billion ordinary shares, and
- 76.7 million performance rights.

This ASX release has been authorised by Ioneer Managing Director, Bernard Rowe.

About Ioneer

Ioneer Ltd. is an emerging lithium–boron producer and the 100% owner of the Rhyolite Ridge Lithium-Boron Project. Rhyolite Ridge is one of only a small number of lithium-boron ore deposits globally and a linchpin project in Nevada's burgeoning Lithium Loop.

Rhyolite Ridge closed a US\$996 million loan with the U.S. Department of Energy's Energy Dominance Finance Program in January 2025. In October 2024, Ioneer received the final federal permit for the project from the Bureau of Land Management, concluding the formal federal permitting process which began in early 2020.

loneer signed separate offtake agreements with Ford Motor Company and Prime Planet Energy & Solutions (joint venture between Toyota and Panasonic) in 2022 and Korea's EcoPro Innovation in 2021.

To learn more about loneer, visit www.loneer.com/investors or join our online communities on [X](#), [Facebook](#), [LinkedIn](#), [Instagram](#) and [YouTube](#).

Competent Persons Statement

In respect of Mineral Resources and Ore Reserves referred to in this presentation and previously reported by the Company in accordance with JORC Code 2012, the Company confirms that it is not aware of any new information or data that materially affects the information included in the public report titled "Further Leach Optimisation Enhances Project Economics" dated 29 October 2025, released on ASX. Further information regarding the Mineral Resource estimate and Ore Reserve can be found in that report. All material assumptions and technical parameters underpinning the estimates in the report continue to apply and have not materially changed.

In respect of production targets referred to in this presentation, the Company confirms that it is not aware of any new information or data that materially affects the information included in the public report titled "Further Leach Optimisation Enhances Project Economics" dated 29 October 2025. Further information regarding the production estimates can be found in that report. All material assumptions and technical parameters underpinning the estimates in the report continue to apply and have not materially changed.

Appendix 1 - Schedule of Tenements

ASX listing rule 5.3.3

Country	Project	Tenement ID	Tenement Name	Area (km ²)	Interest at beginning of quarter	Interest at end of quarter	Note
