Avira Resources Ltd (ASX: AVW) (**Avira** or the **Company**) is pleased to advise that key regulatory, environmental and heritage approvals required for commencement of on-ground exploration at the High-Grade Mt Cattlin Gold Project in Western Australia have been secured.

Program of Work 206331, covering a 4,500-metre RC drill program across the Sirdar, Maori Queen, Ellendale and Plantagenet prospects, has been approved by the Department of Mines, Petroleum and Exploration (**DMPE**). Flora and Fauna survey conditions have been satisfied, and a heritage survey has been completed in collaboration with the Wagyl Kaip Southern Noongar Aboriginal Corporation (**WKSNAAC**). Formal heritage approval reports are expected within the statutory timeframes following completion of the survey, after which on-ground activities are planned to commence.

Highlights

- **Program of Work Approved:** PoW 206331 covering a 4,500-metre RC drill program across Sirdar, Maori Queen, Ellendale and Plantagenet has been approved by DMPE.
- **Environmental Clearance Granted:** Flora and Fauna survey completed by Botanica Consultants Pty Ltd across the program area - all conditions set by the Department of Biodiversity, Conservation and Attractions (**DBCA**) have been satisfied.
- **Heritage Survey Completed — No Significant Finds:** (WKSNAAC heritage survey completed in late April 2025. Heritage representatives provided verbal notification on-site that no significant finds were identified. The Preliminary Advice Notice is due within 12 business days of survey completion and the Final Survey Report within 35 business days. Receipt of the Preliminary Advice Notice is the operative trigger for commencement of on-ground activities.

Approvals Summary

Approval	Authority	Status
Program of Work 206331 (4,500m RC Drilling)	DMPE (Dept of Mines, Petroleum & Exploration)	Approved
Flora & Fauna Survey	DBCA (Dept of Biodiversity, Conservation & Attractions)	Completed — conditions satisfied
Heritage Survey	WKSNAAC (Wagyl Kaip Southern Noongar Aboriginal Corporation)	Completed

Executive Director James Robinson commented: *PoW 206331 has been approved by DMPE, environmental conditions have been satisfied, and the WKSNAAC heritage survey has been completed with the full participation of heritage representatives — who provided verbal notification on-site that no significant finds were identified. We expect the Preliminary Advice Notice within 12 business days of survey completion, which will clear the way for commencement of on-ground activities. We have a well-defined set of drill targets supported by exceptional historical grades, and the foundations of the upcoming maiden drill program and been securely laid. This is a very exciting time for Avira which provides exceptional leverage for its shareholders in the current favourable gold price environment."*

Mt Cattlin Gold Project — Overview

The Mt Cattlin Gold Project is located in the southern Goldfields-Esperance region of Western Australia, approximately 550 km south-east of Perth and 4 km north of Ravensthorpe, within the Ravensthorpe Greenstone Belt of the Yilgarn Craton. The Project is held under Exploration Licence E74/401, registered in the name of Galaxy Lithium Australia Pty Ltd (a subsidiary of Rio Tinto Lithium), with Avira (via Prowse Commodities Pty Ltd) holding all mineral rights excluding pegmatite minerals. The Project is situated immediately adjacent to Rio Tinto's Mt Cattlin Lithium Mine. Historical production from the Maori Queen and Sirdar deposits totals 23,006 tonnes at 24.56 g/t Au¹ — a pedigree that speaks directly to the high-grade character of the system.

The geology is characterised by sheared Archaean mafic and felsic metavolcanic rocks (Annabelle Volcanics) intruded by a significant multiphase porphyry complex (approximately 2.5 km × 1.5 km), interpreted as the primary control on gold mineralisation. Mineralisation occurs in two styles: narrow, high-grade shear-hosted quartz-sulphide lodes at Sirdar and Maori Queen; and broader disseminated stockwork mineralisation associated with the porphyry complex. The project-scale plan (Figure 1) shows the prospects and geological setting of the project area.

Approvals and Regulatory Status

Program of Work — PoW 206331

The DMPE has granted approval for Program of Work 206331, covering the designed 4,500-metre RC drill program at Mt Cattlin. The approved PoW encompasses all targeted extensional and exploration targets across Sirdar, Maori Queen, Ellendale and Plantagenet. This approval is the cornerstone regulatory instrument enabling commencement of on-ground drilling activities and was granted following Avira's satisfaction of all conditions set by the relevant departments.

Environmental Clearance — Flora and Fauna Survey

A comprehensive Flora and Fauna survey was completed across the program area in accordance with the requirements of the Department of Biodiversity, Conservation and Attractions (DBCA). The survey was conducted by Botanica Consultants Pty Ltd, Avira's appointed environmental consultants, and returned a successful outcome. All conditions arising from the survey have been satisfied, and environmental clearance has been incorporated into the PoW approval.

Heritage Approval — Wagyl Kaip Heritage Survey

A heritage survey of the project area was completed in late April 2025 in close collaboration with the Wagyl Kaip Southern Noongar Aboriginal Corporation (WKSNAC), with full participation from Wagyl Kaip heritage representatives across the program area (Figure 2). Upon completion of the survey and while still on-site, heritage representatives provided verbal notification that no significant finds were identified during the course of the survey.

The survey process is subject to two formal reporting milestones under the applicable heritage agreement:

- **Preliminary Advice Notice** — due within 12 business days of survey completion. Receipt of this notice is the operative trigger permitting commencement of on-ground exploration activities.
- **Final Survey Report** — due within 35 business days of survey completion. This report constitutes the formal heritage clearance documentation for the project area.

The Company expects both documents to be received within their respective statutory timeframes. The process has established a constructive working relationship between Avira and the Wagyl Kaip group, which the Company regards as an important foundation for responsible exploration at Mt Cattlin. Avira is committed to ongoing engagement with the Wagyl Kaip people throughout the exploration program.

Next Steps

Having received all necessary approvals and permits to commence on-ground exploration, pending the receipt of the WKSNAAC Preliminary Advice Notice, the Company intends to pursue its first phase of RC exploration drilling across Maori Queen and Sirdar. The RC program is designed to define shallow extensions to the known mineralisation and establish the basis for a maiden Mineral Resource Estimate. RC drilling will simultaneously test extensions at Ellendale and Plantagenet, with ongoing geological investigation addressing the Project's broader gold exploration potential.

Targets and Objectives

Q2 2026 — RC drill program commencement at Maori Queen and Sirdar

Q2-Q3 2026 — Drill-testing of Ellendale and Plantagenet extensions

Q3-Q4 2026 — Maiden Mineral Resource Estimate

For, and on behalf of, the Board of the Company, and authorised for release.

James Robinson

Executive Director

Avira Resources Limited

About Avira Resources Limited

Avira Resources Limited (AVW) is an ASX listed mining exploration company exploring for gold, copper and base metals with projects in Western Australia and Sweden.

The Mt Cattlin Gold Project, located within the highly endowed Ravensthorpe Greenstone Belt of the Yilgarn Craton, is a high-priority gold-copper asset. The project's close proximity to the world-class Rio Tinto's Mt Cattlin Lithium Mine and Medallion Metals' 1.3Moz Kundip Gold Project validates its district-scale potential. Following completion of the acquisition announced on 20 October 2025, AVW holds 100% of the gold and non-pegmatite mineral rights over Exploration Licence E74/401. Multiple advanced prospects, including Ellendale, Plantagenet and Revival, exhibit strong gold-copper geophysical and geochemical signatures within favourable magnetic skarn zones, representing immediate, drill-ready targets for resource delineation.

The Tangadee Project currently consists of three granted exploration licences E52/4411 E52/4439 and E52/4413 for a total of 249 blocks or 779 km² located in the Ashburton region of Western Australia which straddles the faulted contact between the Edmund and Collier Basins in the Capricorn Orogen of Western Australia. Avira is targeting sediment-hosted Cu-Zn sulphide and magmatic Cu-Ni sulphide deposits, principally by drill testing late-time EM conductors (VTEM) that lie either on or close to the intersection of the major, east-trending Mount Vernon Fault and NE and NW trending splays and linking structures.

The Puolalaki Project currently comprises a single exploration permit (Puolalaki nr 100) centred over a synorogenic gabbro intrusion that hosts the nickel mineralisation discovered by NAN in 1998. In addition to the Ni-Cu-Co mineralisation at Puolalaki, the project also contains significant, high-grade gold mineralisation across two zones within the metasediments and metavolcanics surrounding the gabbro. The project is located in Sweden's premier Gällivare mining district which is host to Europe's largest open-cut copper mine Aitik, owned by Boliden and to LKAB's Malmberget iron-ore mine.

Forward looking statements

This announcement contains forward-looking statements which are identified by words such as 'may', 'could', 'believes', 'estimates', 'targets', 'expects', or 'intends' and other similar words that involve risks and uncertainties. These statements are based on an assessment of present economic and operating conditions, and on a number of assumptions regarding future events and actions that, as at the date of this announcement, are expected to take place. Such forward-looking statements does not guarantee future performance and involve known and unknown risks, uncertainties, assumptions and other important factors, many of which are beyond the control of the Company, the directors and our management. We cannot and do not give any assurance that the results, performance or achievements expressed or implied by the forward-looking statements contained in this announcement will actually occur and investors are cautioned not to place undue reliance on these forward-looking statements. We have no intention to update or revise forward-looking statements, or to publish prospective financial information in the future, regardless of whether new information, future events or any other factors affect the information contained in this announcement, except where required by law. These forward-looking statements are subject to various risk factors that could cause our actual results to differ materially from the results expressed or anticipated in these statements.

Competent Persons Statement – Mt Cattlin Gold Project

The information in this announcement that relates to exploration results in relation to the Mt Cattlin Gold Project was previously announced with a competent person statement on 24 March 2026 in the ASX announcement titled "High-Grade Gold Confirmed at Mt Cattlin". The Company is not aware of any new information or data that materially affects that information included in this announcement.
