Fluence Wins Strategic Industrial Water Treatment Contract in Texas valued at USD ~\$3.7 million

As part of its growing portfolio of industrial projects in the US, Fluence Corporation Limited (ASX: FLC) (the "Company") is pleased to announce it has secured a significant industrial water treatment contract in Texas. The total contract value is approximately USD \$3.7 million for the design and construction of a water treatment plant utilizing ultrafiltration (UF) and reverse osmosis (RO) technologies for a prominent U.S. manufacturer located in Texas.

Upon completion, the facility will be capable of producing up to 1.5 million gallons per day of water supply and enable the customer to treat groundwater sourced from an on-site well for use as cooling tower makeup. Amid increasing water scarcity challenges in Texas, the system will significantly reduce the customer's dependence on municipal water supplies while enhancing long-term operational resilience. The plant is expected to be installed and fully operational by the end of 2026.

Fluence's high-efficiency quick-to-deploy systems are an excellent solution to meet our customer's water supply needs and stringent water quality requirements as they are designed to maximize water recovery and sustainability by achieving greater than 90% recovery of feedwater.

"Industrial manufacturers across Texas and other drought-stricken regions in the US are increasingly confronting the reality that water security could become an operational issue," said Ben Fash, CEO and Managing Director of Fluence. "This project demonstrates how advanced water treatment technology can help industry maintain production while supporting the community's broader water conservation goals during periods of extreme drought."

"This project reflects a growing shift among industrial operators toward sustainable water management strategies," added Mr. Fash. "Fluence is very active in the region and uniquely positioned to help customers rapidly deploy decentralized treatment systems that improve resilience, reduce environmental impact, and protect critical industrial operations. We are excited to partner with manufacturers to help them solve the pressing issues they are facing on important projects. We hope to be able to provide solutions to many other industrial customers facing similar challenges in the US and abroad."
