University of Melbourne and CPV Awarded ARC Linkage Grant

\$280,000 ARC Linkage Grant awarded to University of Melbourne and ClearVue to Advance Next-Generation Solar Window Technology

20th May 2026 – Smart building materials company ClearVue Technologies Limited (ASX:CPV) (*ClearVue or the Company*) is pleased to announce that it has been awarded an Australian Research Council (ARC) Linkage Projects grant, in partnership with The University of Melbourne, to support the design, modelling, construction and testing of advanced solar window technology over a three-year program.

The grant was announced as part of the ARC's Linkage Projects 2025 Round 2 outcomes and provides \$280,946 in funding to the university-led research project. ClearVue is the industry partner on the project, which is led by Professor Paul Mulvaney, with Associate Professor James Bullock and Dr Mikhail Vasiliev. The research team brings together expertise in materials science, photovoltaics and solar device engineering.

The project will focus on designing, modelling, constructing and testing new techniques capable of enhancing solar electricity generation. If successful, this research could lead to new technology being incorporated into coming versions of the ClearVue Solar Window. The work is directly aligned with ClearVue's commercial roadmap and will feed into the continued development of the Company's solar vision glass product.

The collaboration deepens the relationship between ClearVue and The University of Melbourne and brings the resources of one of Australia's leading research institutions to bear on the engineering challenges of next-generation building-integrated photovoltaics (BIPV). The expected outcomes of this project will be a next generation advanced, Australian designed window, which can be incorporated into buildings worldwide.

ARC Linkage Projects are nationally competitive grants that fund collaborative research between universities and industry partners on projects of strategic significance to Australia.

Chief Executive Officer & Managing Director Douglas (Doug) Hunt said:

"ClearVue participating in research funded by an ARC Linkage grant with The University of Melbourne is a strong endorsement of the science and engineering behind ClearVue's technology. The calibre of the research team we are working with. The program is relevant to our vision glass development pathway and gives us access to world-class research capability. ClearVue already produces the world's only truly clear solar glazing that is capable of matching reflectivity and thermal performance in advanced glazing. This is exactly the kind of partnership that helps us move faster on product development, while continuing to protect and enhance shareholder value."

Authorised by the Board of ClearVue Technologies Limited.

ABOUT CLEARVUE TECHNOLOGIES LIMITED

ClearVue Technologies Limited (ASX: CPV; OTCX: CVUEF) is an Australian technology company that integrates solar technology into building façade and rooftop surfaces to provide renewable energy generation and offset the operational carbon footprint of buildings. The Company's advanced, patented glass technology preserves glass transparency maintaining building aesthetics while generating energy.

ClearVue has extended solar energy-generation to vision glass, cladding, spandrel, balustrade, and skylight solutions. These solutions can offset operational energy requirements significantly contributing to the net zero building.

ClearVue's integrated solar façade is revolutionizing the way buildings are designed, constructed, and renovated. Experience how building façades will become a major contributing factor to reducing operational carbon by visiting ClearVue at www.clearvuepv.com.
