

MONS PROJECT, WA

Release Date 9 June 2026

Strong gold soil geochemistry assays highlight potential at Mons Project in WA

Drill test program design commenced in preparation for drilling in the coming quarter

Nimy Resources (ASX: NIM) is pleased to announce that it has outlined several strong gold surface anomalies at its Mons Project in WA, following an extensive soil geochemistry program which commenced in late 2025.

Analysis of the 9,222 soil samples returned from assay is ongoing. To date, our geological team has delineated a zone of anomalous gold, associated with pathfinder elements including arsenic, antimony, bismuth, molybdenum, silver, tellurium, and tungsten, based on 3,076 samples received from the laboratory.

The gold in soil anomaly is coherent along a ~16km long corridor parallel to the eastern granite greenstone contact which continues another 85km (untested).

Results highlight the strong potential for orogenic gold and intrusion-hosted gold.

The ~16km anomalous gold in soil trend contains the newly named “Corporate James” gold prospect.

Follow up drilling is in plan, focused on the Corporate James Prospect which has returned the highest anomalies along a 720m NS trending strike.

Nimy Managing Director Luke Hampson said:

“These are extremely promising results. Given the short history of gold exploration in the area now known as the Mons Greenstone Belt, there are several reasons to be very encouraged by what we have seen.

“The coherence and strength of the gold in soil anomaly along with the pathfinder elements support the potential for gold mineralisation. We are moving forward in designing an initial drill program to test for the source of the gold anomalies.

“With targeted gold exploration now advancing alongside metallurgical test work and economic studies at the Block 3 gallium project, as well as ongoing geophysical work to identify the source of the Masson copper-nickel-PGE and Sneaky Squirrel copper-zinc-gold mineralisation, we expect to be very active on the ground in the second half of 2026.”

Programme overview

- Geochemical assay results have been received for 9,222 samples from the Ultrafine™ regolith sampling program, with a further 7,000+ samples currently in collection or laboratory processing.
- The program is designed to identify significant gold and gold-pathfinder soil anomalies across the Mons Project tenements.
- Evaluation of the results is ongoing, with the first defined target comprising 3,076 samples from the Corporate James trend, which has now been prioritised for follow-up exploration.
- Anomalies have been prioritised, with the Corporate James Prospect given the highest priority. Priority 2 targets at Masson-Thompson, Sneaky Squirrel and Palindrome are also slated for extension and infill sampling as part of the current programme.

Corporate James results

- Ongoing results from the Corporate James trend confirm and extend multiple parallel, north-south oriented gold anomalies, with variable coincident and elevated concentrations of arsenic-antimony-bismuth-molybdenum-silver-tungsten-tellurium.
- Gold and gold pathfinder anomalies have been identified along a strike length of over ~16km, thus providing Nimy with multiple options for follow-up exploration work including drilling.
- Extensional soil sampling along strike from at Corporate James has been prioritised.

Geological interpretation

- These multi-element anomalies are located within areas of residual soil, as defined by the Nimy-sponsored CSIRO Landscape+ remote regolith mapping program.
- The residual regolith gold and gold pathfinder anomalies are orientated to the overall north-northeast - south-southwest strike of the Mons Greenstone Belt (MGB) in the Corporate James area. The former orientation is attributed to secondary splay faults/shears and is potentially the host to gold mineralisation.
- Previously explored for komatiite-hosted nickel, the Corporate James results confirm the gold prospectivity of the eastern margin of the MGB, abutting younger granites to the east.

Next steps

- A drill strategy is now in planning formulated to test the source of the anomalies along the trend.
- Nimy's analysis integrating this data with its geological and geophysical database, is ongoing.
- Additional targets generated from this work will be scheduled for further sampling.

About Nimy Resources and the Mons Project

Nimy Resources is a Western Australian exploration company that has prioritised the development of its recently discovered Mons Belt, situated 370km northeast of Perth and 140km north-northwest of Southern Cross, a Tier 1 jurisdiction in Western Australia.

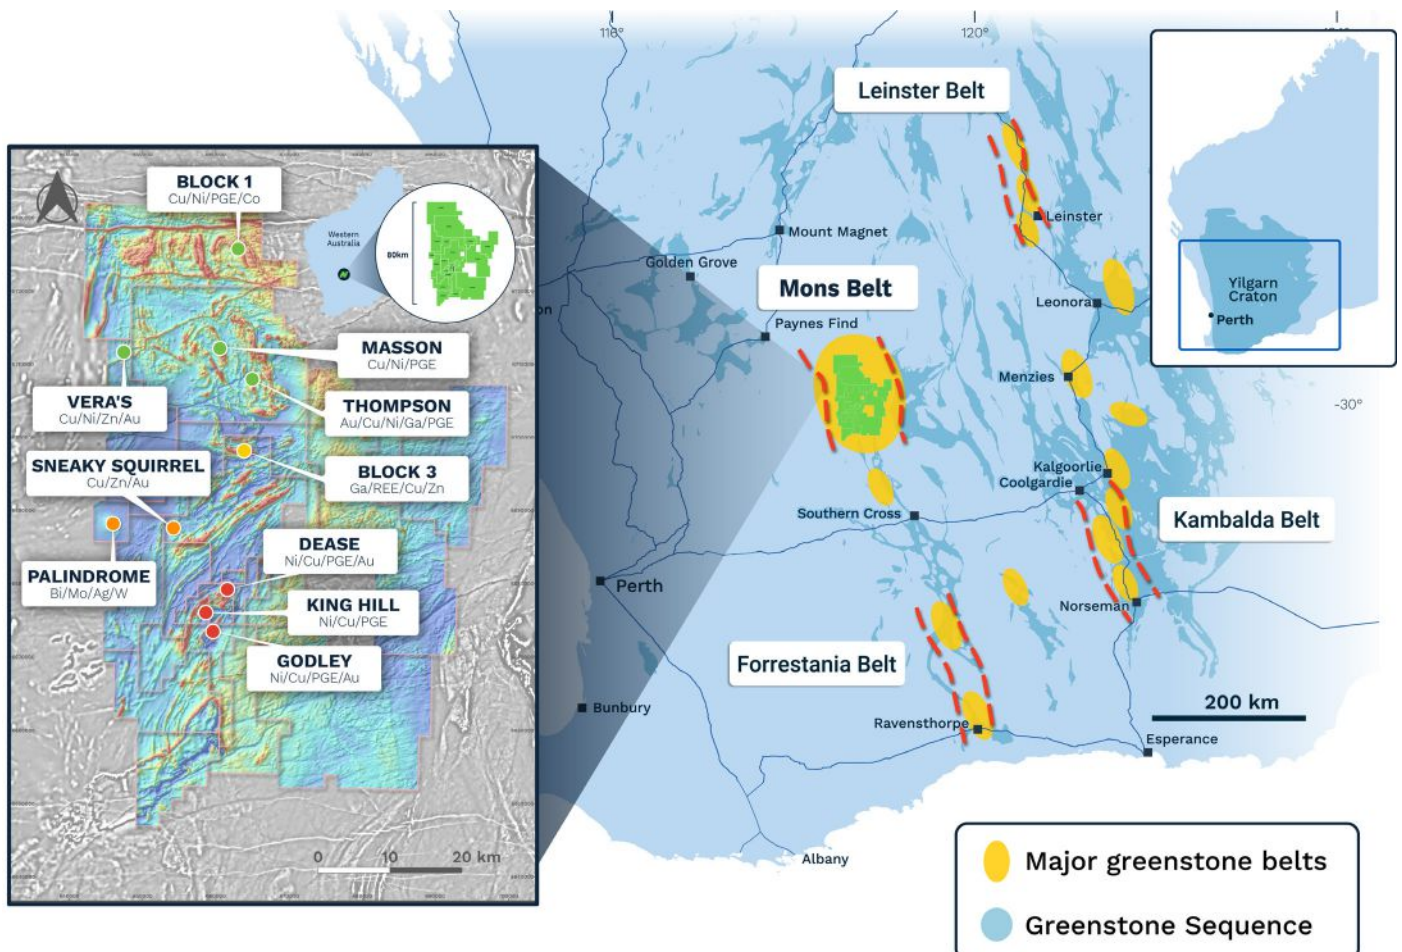

The Mons Belt represents a district scale discovery, spanning ~80km x 30km over 17 tenements with a north/south strike of some 80km of mafic and ultramafic sequences covering ~3004km² north of the Forrestania greenstone belt.

The Mons Belt provides a new and exciting frontier in critical metal and gold exploration in Western Australia, the company is currently working with the CSIRO to advance the lithology and mineralisation types within one of Australia’s newest greenstone belt discoveries in the Yilgarn Craton, a region with significant untapped potential.

Nimy Resources believes the Mons Belt offers multi commodity potential with the initial discovery of Masson (Cu, Ni, Co, Au & PGE’s) in addition to Block 3 East Prospect with high-grade gallium (Ga) discovered in the northern tenements.

In addition to these discoveries, the southern tenements have significant fertile komatiite sequences like those found in the Kambalda region of WA.

Nimy Resources is always mindful of its shareholders and the need to continue efforts in creating shareholder value through a methodical and science-based approach.

Competent Person's Statement

The information contained in this report that pertains to the exploration results and Mons Gallium Block 3 Exploration Targets, is based upon information compiled by Mr. Fergus Jockel, a full-time employee of Fergus Jockel Geological Services Pty Ltd. Mr. Jockel is a Member of the Australasian Institute of Mining and Metallurgy (1987) and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the December 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" (the JORC Code). Mr Jockel consents to the inclusion in the report of the matters based upon his information in the form and context in which it appears.

No New Information

To the extent that this announcement contains references to prior exploration results which have been cross referenced to previous market announcements made by the Company, unless explicitly stated, no new information is contained. The Company confirms that it is not aware of any new information or data that materially affects the information included in the relevant market announcements and, in the case of estimates of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcements continue to apply and have not materially changed.

Forward Looking Statement

This report contains forward looking statements concerning the projects owned by Nimy Resources Limited. Statements concerning mining reserves and resources may also be deemed to be forward looking statements in that they involve estimates based on specific assumptions. Forward-looking statements are not statements of historical fact and actual events, and results may differ materially from those described in the forward-looking statements as a result of a variety of risks, uncertainties and other factors. Forward looking statements are based on management's beliefs, opinions and estimates as of the dates the forward-looking statements are made and no obligation is assumed to update forward looking statements if these beliefs, opinions and estimates should change or to reflect other future developments.

JORC Code, 2012 Edition – Table 1 report template.

Section 1 Sampling Techniques and Data (Criteria in this section apply to all succeeding sections)

| Criteria | JORC Code Explanation | Commentary |
|-------------------------------------|--|--|
| <p>Sampling Techniques</p> | <ul style="list-style-type: none"> ❖ Nature and quality of sampling (e.g., cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or hand-held XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. ❖ Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. ❖ Aspects of the determination of mineralisation that are Material to the Public Report. ❖ In cases where ‘industry standard’ work has been done this would be relatively simple (e.g. ‘reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay’). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information. | <ul style="list-style-type: none"> ❖ Soil samples were collected by digging a small hole to collect a B-horizon sample from a nominal 30cm depth. Samples size collected is approximately 200g sample of total material collected. The collected sample is put into a numbered paper geochemical bag and submitted to the laboratory for analysis. ❖ The soil sample was collected form a depth of 30cm to ensure sample was free from any surface disturbance. ❖ A nominal 200g sample of <2mm B-horizon material was collected from a nominal 30cm depth. Samples were submitted to Labwest for analysis by their patented Ultrafine™ methodology. ❖ Samples were collected at 50m intervals along lines and sample line separation varies from 400m to 1200m. ❖ Sample locations are recorded by hand-held GPS. |
| <p>Drill Techniques</p> | <ul style="list-style-type: none"> ❖ Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc.) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc.). | <ul style="list-style-type: none"> ❖ N/A – no drilling was completed. |
| <p>Drill Sample Recovery</p> | <ul style="list-style-type: none"> ❖ Method of recording and assessing core and chip sample recoveries and results assessed. ❖ Measures taken to maximise sample recovery and ensure representative nature of the samples. ❖ Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material. | <ul style="list-style-type: none"> ❖ N/A – no drilling was completed. |

| Criteria | JORC Code Explanation | Commentary |
|---|---|---|
| Logging | <ul style="list-style-type: none"> ❖ Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. ❖ Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc.) photography. ❖ The total length and percentage of the relevant intersections logged. | <ul style="list-style-type: none"> ❖ N/A - no logging of rock material has been undertaken during the collection of soil samples. ❖ N/A - no logging of rock chips has been carried out. |
| Sub-sampling techniques and sample preparation | <ul style="list-style-type: none"> ❖ If core, whether cut or sawn and whether quarter, half or all core taken. ❖ If non-core, whether riffled, tube sampled, rotary split, etc. and whether sampled wet or dry. ❖ For all sample types, the nature, quality and appropriateness of the sample preparation technique. ❖ Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. ❖ Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling. ❖ Whether sample sizes are appropriate to the grain size of the material being sampled. | <ul style="list-style-type: none"> ❖ N/A – no diamond core drilling has been undertaken. ❖ A bulk soil has been collected from the designated depth for sampling. Samples have been dry sieved to a <2mm size fraction. ❖ Soil sampling is designed to identify geochemical trends to assist in targeting potential mineralisation. The sampling technique and preparation is considered appropriate for the sample media. ❖ A bulk sample of < 2mm soil material was collected from bottom of 30cm hole. No selective sampling of material other was undertaken. ❖ The sample size collected is considered appropriate for the assay method being undertaken. |
| Quality of assay data and laboratory tests | <ul style="list-style-type: none"> ❖ The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. ❖ For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. ❖ Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established. | <ul style="list-style-type: none"> ❖ Samples were submitted to Labwest for analysis by their Ultrafine™ methodology, which involves splitting off a -2um size fraction and assayed using an aqua regia digest. The technique can be considered partial digest but is considered appropriate for the type of material being sampled. ❖ N/A – no such instruments have been reported. ❖ QA/QC procedures are considered appropriate; the standards and duplicates used are accredited and as such are considered satisfactory. |

| Criteria | JORC Code Explanation | Commentary |
|--|--|--|
| Verification of sampling and assaying | <ul style="list-style-type: none"> ❖ The verification of significant intersections by either independent or alternative company personnel. ❖ The use of twinned holes. ❖ Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. ❖ Discuss any adjustment to assay data. | <ul style="list-style-type: none"> ❖ Sample results are merged by the company's database consultants. ❖ Results are uploaded into the company database, with verification ongoing. Adjustments are never made to the raw assay data. |
| Location of data points | <ul style="list-style-type: none"> ❖ Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. ❖ Specification of the grid system used. ❖ Quality and adequacy of topographic control. | <ul style="list-style-type: none"> ❖ Soil sample locations are located by handheld Garmin GPS to an accuracy of approximately +/-5 metres. ❖ Locations are given in MGA94 Zone 50 projection. ❖ Diagrams and location table are provided in the report. ❖ Topographic control is by detailed air photo and GPS data. |
| Data spacing and distribution | <ul style="list-style-type: none"> ❖ Data spacing for reporting of Exploration Results. ❖ Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. ❖ Whether sample compositing has been applied. | <ul style="list-style-type: none"> ❖ Soil sample spacing is approximately 50m along lines and sample line separation varies from approximately 400m to 1200m. Sample locations are included in the report. ❖ The sample location separation is considered sufficient enough to outline potential areas of mineralisation for the commodities the Company is exploring for. |
| Orientation of data in relation to geological structure | <ul style="list-style-type: none"> ❖ Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. ❖ If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material. | <ul style="list-style-type: none"> ❖ The sampling lines are believed to be approximately perpendicular to the strike of mineralisation and therefore the sampling is considered representative of any potential mineralisation. ❖ This is allowed for when geological interpretations are being completed. |
| Sample Security | <ul style="list-style-type: none"> ❖ The measures taken to ensure sample security. | <ul style="list-style-type: none"> ❖ Samples are collected by company personnel, or company supervised contractors, and delivered directly to the laboratory. Under certain circumstances samples are kept in a locked storage facility for short periods of time prior to being sent to the laboratory. |

| Criteria | JORC Code Explanation | Commentary |
|--------------------------|---|---|
| Audits or reviews | <ul style="list-style-type: none"> The results of any audits or reviews of sampling techniques and data. | <ul style="list-style-type: none"> No audits have been completed. Review of QA/QC data by database consultants and company geologists is ongoing. The data are individually verified by the Company's consultant geophysicists. |

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section)

| Criteria | JORC Code Explanation | Commentary |
|--|--|---|
| Mineral tenement and land tenure status | <ul style="list-style-type: none"> Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area. | <ul style="list-style-type: none"> E77/2714, E77/2438, E77/3241, E77/2332 are registered in the name of Nimy Resources (ASX:NIM) The Mons Project is approximately 140km NNW of Southern Cross. |
| Exploration done by other parties | <ul style="list-style-type: none"> Acknowledgment and appraisal of exploration by other parties. | <ul style="list-style-type: none"> The tenements have had low levels of surface geochemical sampling and wide spaced aircore and RAB drilling and ground EM surveys by Image Resources and Emu Nickel. |
| Geology | <ul style="list-style-type: none"> Deposit type, geological setting and style of mineralisation. | <ul style="list-style-type: none"> Potential gold, copper, nickel, zinc, lead, bismuth, molybdenum and silver (sulphide hosted) mineralisation. Interpreted as mafic and felsic intrusive related – geological interpretations are ongoing. |

| Criteria | JORC Code Explanation | Commentary |
|---|--|--|
| Drill hole information | <ul style="list-style-type: none"> ❖ A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> ❖ easting and northing of the drill hole collar. ❖ elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar. ❖ down hole length and interception depth. ❖ hole length. ❖ If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case | <ul style="list-style-type: none"> ❖ Sample locations and directional information provided in the report. |
| Data aggregation methods | <ul style="list-style-type: none"> ❖ In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high grades) and cut-off grades are usually Material and should be stated. ❖ Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. ❖ The assumptions used for any reporting of metal equivalent values should be clearly stated. | <ul style="list-style-type: none"> ❖ Nil. |
| Relationship between mineralisation widths and intercept lengths | <ul style="list-style-type: none"> ❖ These relationships are particularly important in the reporting of Exploration Results. ❖ If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. ❖ If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g) ‘down hole length, true width not known’). | <ul style="list-style-type: none"> ❖ Not applicable as this report refers to soil sampling only. |
| Diagrams | <ul style="list-style-type: none"> ❖ Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views. | <ul style="list-style-type: none"> ❖ Maps / plans are provided in the report. |

| Criteria | JORC Code Explanation | Commentary |
|---|---|--|
| Balanced reporting | <ul style="list-style-type: none"> ❖ Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results. | <ul style="list-style-type: none"> ❖ All soil sample locations are shown in figures, and all significant results are provided in this report. ❖ The report is considered balanced and provided in context. |
| Other substantive exploration data | <ul style="list-style-type: none"> ❖ Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances. | <ul style="list-style-type: none"> ❖ Refer to historic exploration (drilling and ground magnetic) survey carried out, and also to “Exploration done by other parties” within this table. |
| Further work | <ul style="list-style-type: none"> ❖ The nature and scale of planned further work (e.g. tests for lateral extensions or depth extensions or large-scale step-out drilling). ❖ Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive. | <ul style="list-style-type: none"> ❖ Programs of follow up rock chip, soil sampling, magnetic survey, DHEM, FLEM and AC, RC and diamond drilling are currently in the planning and/or approval stage. |
