19 June 2026
ASX: CXU

CAULDRON included in SPROTT Junior Uranium Miners ETF (NASDAQ: URNJ)

Highlights

- **Cauldron has been included in the Sprott Junior Uranium Miners ETF (NASDAQ: URNJ) ("URNJ")**
- **URNJ provides exposure to small and mid-cap sized companies engaged in uranium mining, exploration and development, particularly those in the exploration and development phase.**
- **Public disclosures show that as at 18 June 2026 URNJ held investments in 41 stocks with a total combined investment value of US$385m, and which included a holding of 18,454,935 fully paid ordinary shares in Cauldron**
- **Inclusion expected to further increase institutional visibility and investor access**
- **Reflects Cauldron's positioning within the global uranium thematic**

Cauldron Energy Ltd (**Cauldron** or the **Company**) (ASX: **CXU**) advises that it has been included in Sprott Junior Uranium Miners ETF (NASDAQ: URNJ) (**URNJ**).

Public disclosures reflect that URNJ held as at 18 June 2026 18,454,935 fully paid ordinary shares in Cauldron, with a market value of US$1,553,423.91. Source: URNJ Sprott Junior Uranium Miners ETF | Precious Metals & Critical Materials ETFs.

URNJ provides exposure to small and mid-cap sized companies engaged in uranium mining, exploration and development, particularly those in the exploration and development phase. URNJ aims to track the performance of the Nasdaq Sprott Junior Uranium Miners Index, and offers investors a way to capitalise on growing demand for uranium.

News of Cauldron's inclusion in URNJ comes after news earlier this quarter that Cauldron had been included in the BetaShares Global Uranium ETF (ASX: URNM) (**URNM.AX**) and Sprott Uranium Miners UCITS ETF (LSE: URNM) (**HANetf**).

Public disclosures reflect that URNM.AX holds as at 18 June 2026 46,365,877 fully paid ordinary shares in Cauldron (Source: ASX URNM | Global Uranium ETF | Betashares) and that **HANetf** holds as at 17 June 2026 71,131,382 fully paid ordinary shares in Cauldron (Source: Uranium Miners ETF | URNM).

Public disclosures by each of URNM.AX and HANetf reflect that both URNM.AX and HANetf have been actively acquiring shares in Cauldron since their initial investments on 31 March 2026.

Jonathan Fisher, CEO of Cauldron Energy, commented:

"*Its very pleasing to confirm that we have been included in the US based Sprott Junior Uranium Miners ETF (URNJ), which is a leading ETF that is focused on the junior end of the uranium mining industry. URNJ is larger than HANetf and URNM.AX and opens Cauldron up to a much larger audience via URNJ's NASDAQ listing; with inclusion in URNJ alongside HANetf and URNM.AX being a strong endorsement of Cauldron's progress and positioning within the uranium sector.*

I note whilst URNJ has published on its website an initial holding level as of 18 June 2026, it is possible that the rebalancing process is not yet complete and further trading could occur.

ETFs may result in elevated trading levels upon rebalancing dates, but additionally – as new funds are invested into the head ETF's, they then deploy those funds across their portfolios regularly. This creates an avenue of additional ongoing trading support. Finally, we now have a track record of being included in ETFs at the last two rebalancing dates (March quarter and June quarter) and we look forward to the next rebalancing dates and the opportunity for further inclusion in additional and larger ETF funds alongside URNJ, URNM.AX and HANetf. The largest of these is Global X Uranium ETF which holds investments in excess of US$6.6Bn.

There are also numerous other ETFs and index funds that have broader investment parameters which Cauldron may qualify for."

This announcement has been authorised for release by Jonathan Fisher, Chief Executive Officer of Cauldron Energy Limited.

About Cauldron

Cauldron Energy Limited is an ASX-listed uranium-focussed company, 100% owner of the Yanrey Uranium Project, covering an area of ~1,493km^2, located approximately 100 kms south of Onslow and within a highly prospective, mineral-rich region containing multiple uranium deposit. The Yanrey Project covers a prospective northeast-southwest trending Cretaceous-age coastal plain developed along the western margin of the Pilbara block. This prospective trend extends for at least 140km in length, of which Cauldron holds ~80km under granted tenement.
