SKS wins \$28 million data centre early works

SKS Technologies Group Limited (ASX: SKS) has been awarded \$28 million of works with Built for the early works on a hyperscale data centre known as MEL2 in Melbourne's northwest. The business completed approximately \$120 million of works including the full suite of critical electrical systems for the MEL1 facility as announced in July 2024.

SKS Technologies Chief Executive Officer, Matthew Jinks, said, "The MEL1 project which we recently completed, represents a significant milestone project for us as the launch pad for securing repeat work with clients and winning increasingly larger contracts for major hyperscale data centre developments.

"We are now an established provider to the data centre market in Australia, with forecasts for the larger Sydney and Melbourne developments in the pipeline equating to 44 projects totalling 11.4GW and 30 projects totalling 9GW respectively."*

The new site at which the MEL2 facility will be located is planned to deliver more than 354MW of capacity via more than \$5 billion of investment. SKS Technologies' early works engagement covers such components as:

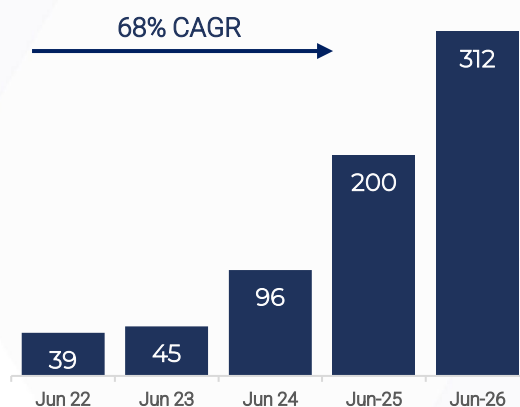

- substation works for the supply and installation of conduits and underground pits for high-voltage (HV) utility services feeding into the gas insulated switchgear (GIS), including interconnecting links to the substation
- complete internal fit-out of the GIS and substation buildings, incorporating lighting, power distribution, and cable support systems
- supply and installation of HV, LV and communications in-ground infrastructure, facilitating early works and enabling subsequent structural construction activities.

Project works will commence immediately.

The early works related to this data centre project will increase the order book to an FY27 starting position of \$312 million showing a growth multiple of 7 times since June 2023.

As reported in May 2026, since February this year, the pipeline of work currently under tender has increased by almost 120% from \$572.26 million to \$1,254.02 million. Data centre tenders comprise just over \$1 billion of the total pipeline compared with \$423.56 million in February 2026.

Work on hand (\$M)

This level of activity is not expected to ease with forecast growth across Australia anticipated to more than double, expanding by 128.6% from 1.4GW of capacity in 2025 to 3.2 GW of capacity in 2030.*
