
Altitude Expands W-Project Land Position

HIGHLIGHTS

- **Altitude has staked 15 additional lode mining claims on open ground immediately adjacent to the W-Project near Winnemucca, Nevada**
- The new claims secure potentially prospective along-strike ground, interpreted to extend the structures hosting the W-Project quartz-calcite epithermal vein system
- The expanded land position now totalling 48 claims provides greater flexibility for geological mapping, geophysics and future drilling across the broader mineralised system
- Recent CSAMT geophysics survey results are being analysed ahead of a field mapping and sampling program to commence next week to ground-truth survey results
- Altitude is advancing target-definition work at the W-Project, with the objective of prioritising drill-ready targets by September

W-PROJECT SUMMARY

40 of 43 historical drill holes intersected gold mineralisation; 7 ended in mineralisation

Significant Historical Intersections include (ASX Announcement "Altitude Secures Significant Gold & Silver Project in Nevada" on 4 May 2026):

- 37m @ 1.30 g/t Au, 9.8g/t Ag from 31m (W87-1);
  - Including 15m @ 2.19 g/t Au, 14.1g/t Ag from 49m.
- 3m @ 3.75 g/t Au, 4.2 g/t Ag from 73m (W87-6);
- 3m @ 1.6 g/t Au, 22 g/t Ag from 81m (DWP92-2);
- 37m @ 0.77 g/t Au, 3.96 g/t Ag from 47m (W90-29);
  - Including 6m @ 1.37 g/t Au, 0.46 g/t Ag from 53m.
- 20m @ 0.68 g/t Au, 1.34 g/t Ag from 26m (W87-24);
  - Including 3m @ 1.38 g/t Au, 3.1 g/t Ag from 33m

Managing Director Duncan Chessell commented:

Securing this adjacent ground is a disciplined and low-cost step that protects the potential along-strike extension of the W-Project mineralised system. The expanded land position gives Altitude greater scope to test the structural corridor as a whole and ensures that prospective ground immediately surrounding our priority targets is retained for shareholders.

Our near-term focus remains on completing the target-definition work required to rank the best drill opportunities at the W-Project and prepare ourselves for a drill program at our Nevada Silver Gold Targets later in 2026 on the Firenze and W-Projects.

Altitude Minerals Ltd (ASX: ATT) (Altitude or the **Company)** is pleased to advise that it has staked 15 additional lode mining claims adjacent to its W-Project, approximately 8km north of Winnemucca, Nevada. The claims were selected to secure prospective ground along strike from the known low-sulphidation epithermal gold-silver system and to protect the Company's ability to explore the broader structural corridor.

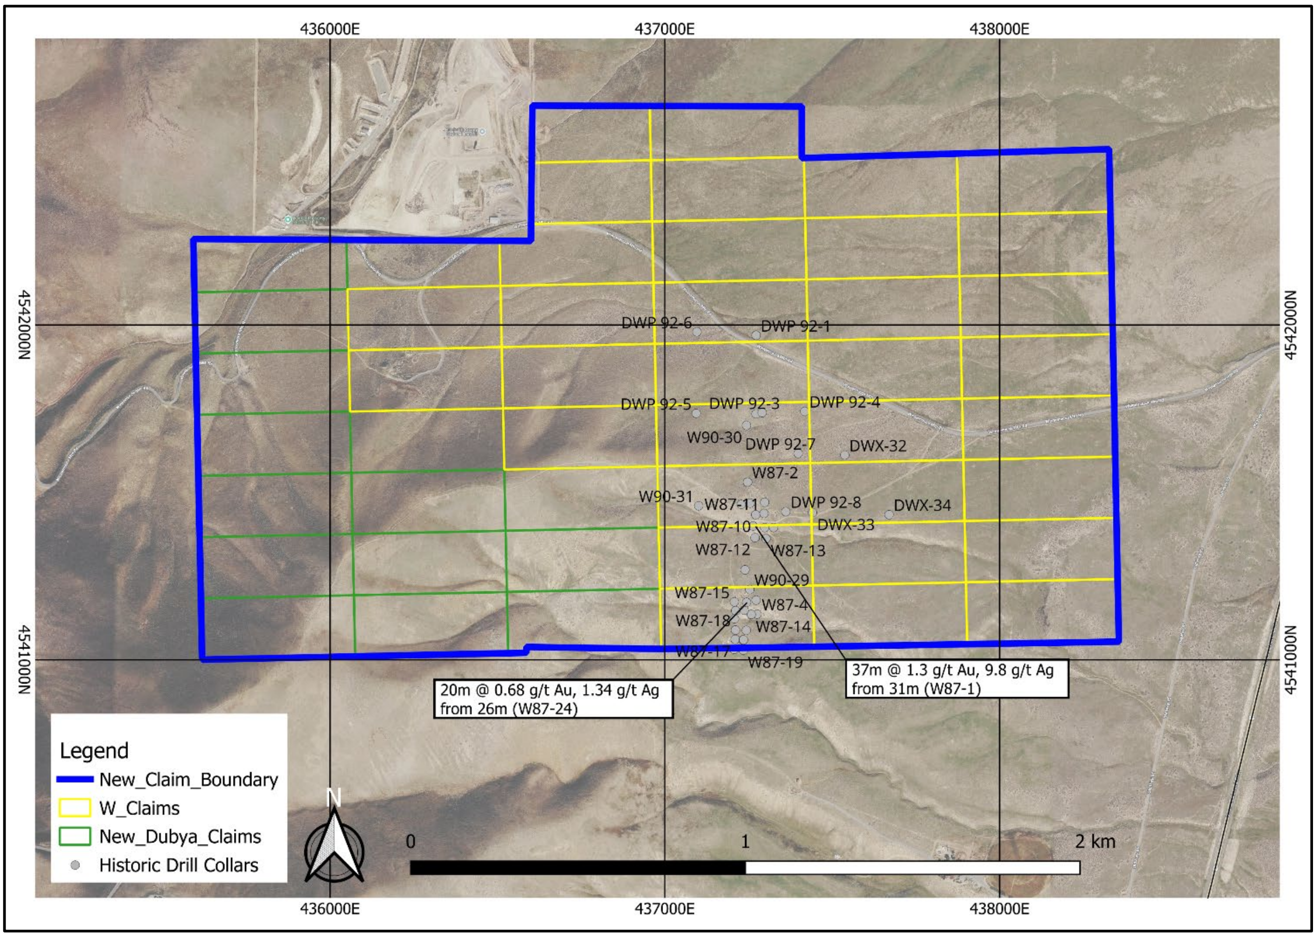

Figure 1 W-Project in Plan View, with newly staked claims (green), original (yellow) and combined area – blue polygon

The W-Project contains an outcropping quartz-calcite vein system extending for approximately 1,800m under cover, while historical drilling identified widespread near-surface gold mineralisation but did not effectively test the interpreted higher-grade feeder and boiling-zone targets. The additional claims are intended to capture possible continuations or splays of the controlling structures beyond the original project boundary.

Altitude will incorporate the newly staked ground into its ongoing geological compilation, mapping and geophysical planning. The expanded tenure may support additional target generation and provides operational flexibility for the location of future drill collars and associated exploration infrastructure, subject to permitting and land-access requirements.

The additional claims were staked directly by the Company, and no acquisition consideration or third-party royalty is payable in relation to the newly staked claims. Final claim registration and recording processes have been completed.
