Keystone Exploration Target – Supplementary Information

Exploration Target Supplementary Disclosure

In accordance with Item 17 of the JORC Code¹ Western Ridge Resources Limited (**ASX: WRX**) ("**Western Ridge**" or "**the Company**") provides the following supplementary information in relation to the Exploration Target announced over the Keystone Project on 15 July 2026 (ASX Announcement "*Keystone Exploration Target Reinforces Scale Potential*").

The Company's upcoming drilling program, scheduled for commencement in the first week of September 2026, will test the continuity and grade of the main vein orientations within the Keystone Mine, which have formed the core of the Exploration Target. This drilling is proposed to take approximately two to three weeks, with samples submitted to ALS Reno for analysis in staged batches throughout that time period. Outside estimates for the return of assay results are quoted by the laboratory as 4 to 6 weeks from receipt of samples.

Phase two drilling, for which permitting is underway, is being designed to test strike extensions of the main portion of the Exploration Target and also test the portion of the target modelled over the area known as the Northwest Adit; situated approximately 400 m northwest of the main Keystone Mine. This phase of drilling is tentatively scheduled to occur within the next 12 months.

The Company looks forward to updating shareholders as this work progresses.

This announcement has been approved by the Board of Directors.
