
FortifAI Expands Advisory Board with Leading Global Sales Executive

Jason Forget has scaled multiple data infrastructure companies from zero to hundreds of millions in annual recurring revenue

Highlights

- New member Jason Forget is currently President and Chief Revenue Officer of Cockroach Labs, a cloud-native database platform built for the AI era, valued at \$5B USD in its 2022 Series F funding round
- Jason Forget scaled past data infrastructure company revenues for Imperva from \$0 to \$350M USD, and Redis from \$0 to \$250M USD
- Mr Forget joins previously announced advisors David Walker, former Westpac Banking Corporation CTO, and Tim Edwards, Head of Global Network and Hosting at MetLife
- Appointments mark the latest step in leadership build-out as the Company scales toward the next version of the AI Data Plane later this calendar year

FortifAI Limited (ASX: FTI) ("FTI" or the "Company") is pleased to advise the addition of Jason Forget to its Advisory Board, joining previously announced members David Walker and Tim Edwards, as the Company continues to build out its Nol8 team and product ahead of commercial release.

New Advisory Board Member

Jason Forget brings deep expertise in enterprise software growth and go-to-market execution, having scaled revenues at multiple data infrastructure companies from inception to hundreds of millions of dollars in annual recurring revenue, including Imperva from \$0 to \$350M and Redis from \$0 to \$250M. He currently serves as President and Chief Revenue Officer of Cockroach Labs, a cloud-native database platform built for the AI era, valued at \$5B USD in its 2022 Series F funding round.

Mr Forget also serves as Board Chair of AG Grid and Bryntum. His track record of scaling data infrastructure companies and expertise in AI-driven go-to-market strategy will provide valuable commercial and growth insight to Nol8's Advisory Board.

"The first wave of AI was about building the brain, encompassing model training and inferencing. Now the second wave, Agentic AI, is exploding as customers build the bodies: autonomous software agents that put that brain to work. Agentic AI is a distinct workload that requires data infrastructure capable of delivering unique, governed data streams to millions of agents at wire speed. Nol8 has the vision and the technology to establish category leadership during this shift and rapidly earn share in what will be an enormous market."

— Jason Forget, President and Chief Revenue Officer, Cockroach Labs

"Jason's deep understanding of the challenges enterprises face with new and emerging workloads, combined with his reputation for identifying high-growth data infrastructure markets and aligning with best-in-class solutions, speaks directly to what Nol8 is building. He is widely recognised throughout the industry for his ability to rapidly scale revenue for new data infrastructure products, and that experience is exactly what we need as we move toward our first commercial release. His addition to our Advisory Board will accelerate our pace of adoption and drive continued growth in shareholder value."

— Kelly Herrell, CEO, Nol8

The Company plans further additions to the Advisory Board in the coming months. Mr Forget's appointment is on similar key terms to previous appointments to the Advisory Board as set out in the Company's ASX Announcement of 26 June 2026.

Authorised for release by the Board of Directors of FortifAI Limited.
