Nano Sensor Development Update

- On 2 June, the Company announced the establishment of a strategic research collaboration with Macquarie University to accelerate development of the Nanosensor Technology. The co-funded program enhances capital efficiency and enables Simble to leverage Macquarie's research expertise and infrastructure.

- Simble continued to develop the Nanosensor technology during the quarter. As detailed in its 10 June 2026 announcement, the current development program is investigating the Nanosensor platform's commercial potential across multiple high value application areas and identifying which of those areas offer the strongest commercial case for accelerated development.

- The NanoSensor Technology is designed to combine four characteristics rarely found together in a single sensing platform: molecular-level sensitivity, sub-millimetre form factor, ultra-low power consumption and integration flexibility, subject to application-specific validation. Together, these properties open commercial pathways into markets where conventional sensor hardware is structurally limited. The evaluation program is currently investigating the platform's commercial potential across the following high-value application areas:

Gas Detection
Molecular-level detection of toxic, hazardous and diagnostic gases at concentrations existing IoT hardware misses entirely — industrial safety, workplace exposure, defence CBRN and medical diagnostics.

UV & Wavelength Sensing
Precision UV detection with strong visible interference — defence sensing, medical sterilisation verification, drone-based environmental monitoring and solar asset management.

E-Skin & Flexible Sensing
Flexible, skin-like sensor films opening pathways into wearables, soft robotics, prosthetics and continuous personal health monitoring — the next generation of wearable tech.

Defence & Security Sensing
Defence and security-relevant sensing applications, including CBRN-relevant field detection, autonomous monitoring platforms and defence wearable concepts, subject to further technical validation and customer engagement.

Multi-Sensor Integration
Multiple sensor types on a single integrated platform, enabling advanced wearable, IoT and industrial devices — extending the addressable market beyond any single-purpose sensor.

Platform Readiness
SimbleSense and CarbonView ingest, visualise and report NanoSensor data — so any application that reaches deployment has an immediate channel through Simble's existing customers.

- The application areas under evaluation collectively address some of the largest and fastest growing markets in the global technology landscape:

Industrial IoT	CBRNe Defence Sensing	Wearable Medical Devices
US$1.69 Trillion	**US$30 Billion**	**US$139 Billion**
projected by 2030[1]	projected by 2033[2]	projected by 2035[3]
