Quarterly Activities and Cashflow Report

For the period ended 30 June 2026

Lithium Plus Minerals Limited (**ASX: LPM**) (**Lithium Plus** or the **Company**) is pleased to provide the following update on its activities for the quarter ended 30 June 2026 (the **Quarter**).

Quarter Highlights

- Lei Resource upgrade delivers 34% increase in contained lithium.
- Exploration targets highlight additional potential at Bynoe.
- Field work to commence at Bynoe.
- Cash Balance of $2.409m at 30 June 2026

Bynoe Lithium Project

Lei Resource Upgrade[1]

Subsequent to quarter end, the Company announced an upgraded Mineral Resource Estimate (MRE) for the Lei Deposit primary pegmatite, within its 100% owned Bynoe Lithium Project, near Darwin in the Northern Territory, Australia.

The upgraded MRE estimates **5.22Mt at 1.50% Li_2O for 78.42kt of contained Li_2O** based on a 0.5% cut-off grade for the Lei primary pegmatite (up from the December 2023 MRE of 4.09Mt at 1.43% Li_2O for 58.49kt). This represents **a 34% increase in contained Li_2O** and increases the proportion of **Indicated category to 55%.**

The upgrade provides a more robust MRE for the Lei primary pegmatite in direct support for on-going mining and development studies evaluating a low-capex Direct Shipping Ore (DSO) operation targeting near term cash flow.

The Resource growth was primarily driven by drilling completed post 2023 MRE, which extended the mineralised pegmatite at depth and along plunge, together with infill drilling that improved geological confidence and enabled portions of the Resource to be upgraded to the Indicated category. The additional drilling and inclusion of two new drillholes has extended geological control across the pegmatite, improving confidence in thickness, continuity and grade distribution.

Significant intercepts from the two new drillholes include:

- **10m @ 1.69% Li_2O** from 614m (BYLDD019)
- **34m @ 1.69% Li_2O** from 396m (BYLDD037)

Lithium Plus is focused on advancing the development of a future, potential low capex underground lithium mine located ~80 km (by road) from Darwin Port, on the Cox Peninsula, Northern Territory. The current strategy is a low capital expenditure, intensive DSO operation, where ore will be crushed and screened on-site, before being transported to port for processing into lithium hydroxide or carbonate at Canmax's facility in China.

[1] LPM ASX Announcement 15 July 2026 - Lei Resource Upgrade Delivers 34% Increase in Contained Lithium

Lei Mineral Resource

The updated Mineral Resource Estimate (MRE) for the Lei Deposit is summarised in Table 1. The new estimate comprises 5.22Mt at 1.50% Li_2O (0.5% cut-off), classified as Indicated and Inferred, with no Measured material at this stage. Relative to the December 2023 maiden MRE, total tonnes have increased by approximately 28% and grade by 0.07%.

The uplift in Resource confidence is supported by additional drilling, completed since the maiden resource estimate, which reduced pierce-point spacing from ~100 m to ~50 m across central portions of the orebody. This tighter drill density has materially improved definition of the pegmatite geometry, reduced uncertainty around internal waste rafts and barren margins, and strengthened continuity of both geology and grade along the principal anisotropy directions. Updated variography and Ordinary Kriging estimation have further reinforced local and global grade continuity. These combined improvements justified the expansion of the Indicated classification in areas where geological confidence and estimation performance now meet JORC 2012 criteria.

***Table 1:** Mineral Resource Summary (at 0.5% Li_2O cutoff)*

Cutoff (%)	Categorisation	Tonnage (Mt)	Grade (%)	Metal (kt)
0.5	Indicated	2.85	1.49	42.55
	Inferred	2.37	1.51	35.88
	Total	**5.22**	**1.50**	**78.42**

Note: Minor discrepancies may occur between component values and total, as a result of rounding.

The Mineral Resource model has been comprehensively updated to reflect the expanded geological dataset and improved understanding of pegmatite continuity. The block model has been rebuilt using revised parent block dimensions that more accurately capture the geometry of the mineralised pegmatite, particularly its variable thickness and contact relationships.

To better honour the structural orientation of the deposit, the model has been rotated into the principal pegmatite trend, improving alignment between geological interpretation, variogram structure and interpolation pathways, and resulting in more coherent grade distribution across the pegmatite.

A comprehensive structural remodelling exercise has significantly improved the representation of pegmatite geometry, orientation and internal architecture, resulting in greater confidence in the distribution and continuity of lithium mineralisation.

A key refinement in the updated model is the treatment of the estimation domain. Previous estimates included only the higher-grade pegmatite core, excluding the surrounding low-grade pegmatite skin. As this skin must be mined to achieve reasonable prospects for eventual economic extraction (RPEEE), its exclusion effectively acted as a bottom-cut on the grade distribution and contributed to an exaggerated nugget effect in the variography.

The updated model incorporates both the mineralised core and the low-grade skin within a single pegmatite domain, reflecting true mining width and geological continuity. This broader domain introduces more structured grade transitions at short ranges, materially improving variogram continuity and reducing the nugget effect, thereby supporting a more stable and realistic ordinary kriging estimate.

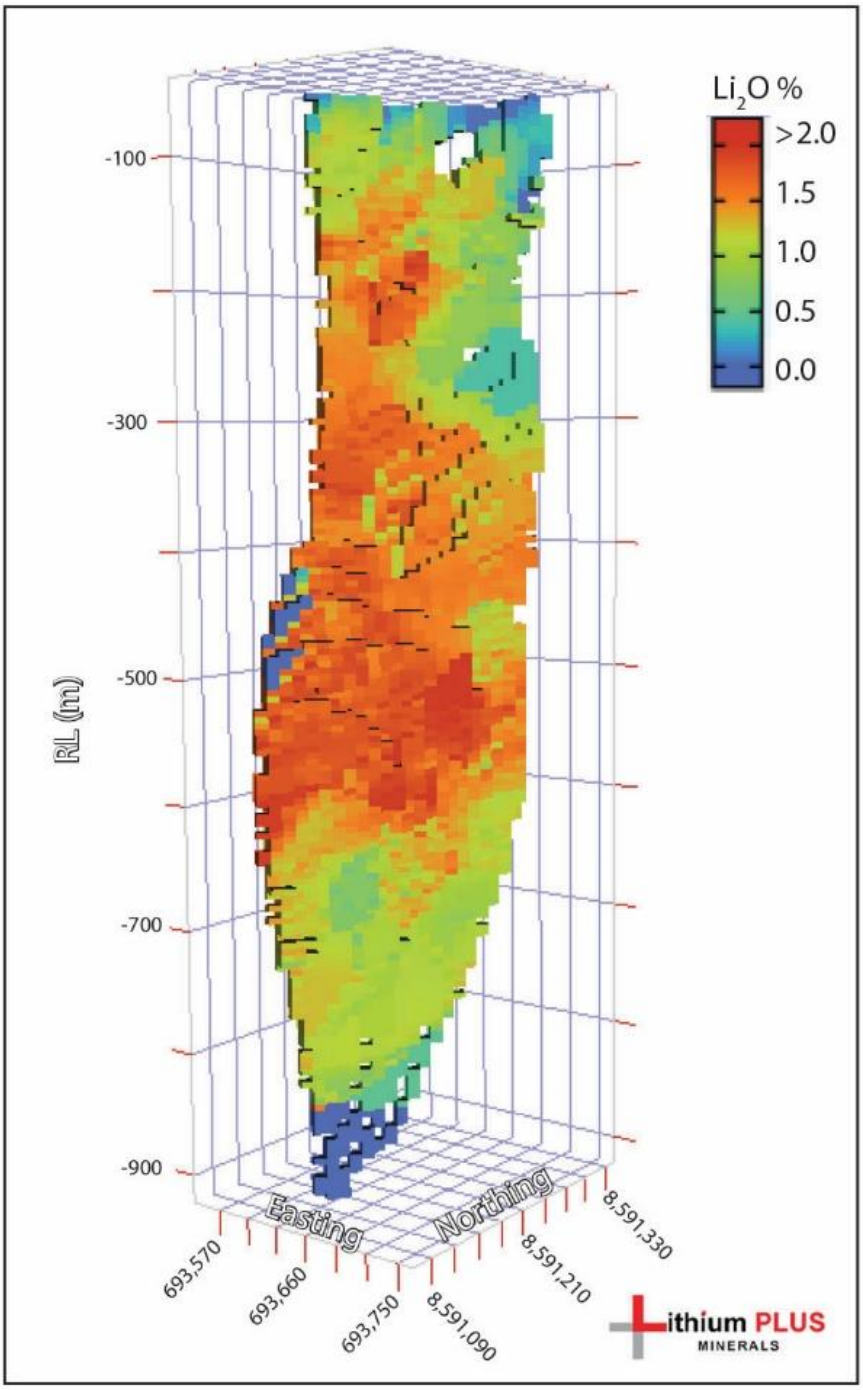

Figure 1: *Lei Resource Block Model*

The updated Mineral Resource was also evaluated across a range of reporting cut-off grades to assess the sensitivity of tonnage and grade to changes in economic assumptions.

The modest response of both grade and tonnage to cut-off changes indicate that the deposit is dominated by consistently mineralised pegmatite rather than narrow high-grade zones surrounded by barren material. As a result, the selected 0.5% Li_2O cut-off is both technically robust and representative of the natural grade distribution, with minimal impact on contained metal relative to adjacent cut-off scenarios.

Table 2: *Grade-tonnage for the Lei deposit at a selection of cutoffs.*

Cutoff (%)	Classification	Tonnage (Mt)	Li_2O Grade (%)	Metal (kt)
0	Indicated	2.90	1.47	42.74
	Inferred	2.38	1.51	35.89
	Total	5.27	1.49	78.63
0.5	**Indicated**	**2.85**	**1.49**	**42.55**
	Inferred	**2.37**	**1.51**	**35.88**
	Total	**5.22**	**1.50**	**78.43**
0.75	Indicated	2.79	1.51	42.19
	Inferred	2.32	1.53	35.52
	Total	5.11	1.52	77.72
1	Indicated	2.58	1.56	40.34
	Inferred	2.15	1.58	33.98
	Total	4.73	1.57	74.32

Exploration Targets Highlight Additional Potential at Bynoe

Exploration Targets have been identified for the Lei Deposit primary (main) pegmatite (at depth), Lei secondary pegmatite (approximately 170m east of the primary pegmatite) and the Perseverance pegmatite, highlighting a strong additional upside potential at Bynoe.

Mineral Resources have not been estimated for the following pegmatites due to insufficient drilling coverage. However, geological interpretation supports the estimation of Exploration Targets prepared in accordance with Clause 17 of the JORC Code. The accompanying Exploration Targets estimated across the Lei primary (main) pegmatite (at depth), Lei secondary pegmatite (approximately 170m east of the primary pegmatite) and the Perseverance pegmatite continue to highlight the exploration potential.

Table 3: *Exploration Target summaries for the Lei Primary, Lei Secondary and Perseverance pegmatites.*

Case	Volume (m^3)	Tonnes (Mt)	Li_2O grade (%)	Contained Li_2O (kt)
Lei Primary Pegmatite				
Low case	300,000	0.8	1.2	10
High case	1,200,000	3.2	1.6	52
Lei Secondary Pegmatite				
Low case	1,200,000	3.2	1.2	39
High case	2,400,000	6.5	1.6	104
Perseverance Pegmatite				
Low case	1,350,000	3.6	1.2	44
High case	3,600,000	9.7	1.6	156
Total Combined Exploration Target				
Low case	2,850,000	7.6	1.2	91
High case	7,200,000	19.4	1.6	310

Note: Values are limited to one decimal place to emphasise the conceptual nature of exploration targets and to avoid implying unwarranted precision

***Cautionary Statement:** The potential quantity and grade of the Exploration Targets are conceptual in nature. There has been insufficient exploration to estimate a Mineral Resource, and it is uncertain whether further exploration will result in the estimation of a Mineral Resource.*

As part of the updated Mineral Resource estimation process, a second pegmatite (the Lei Secondary pegmatite) located to the east of the Primary Pegmatite was interpreted and modelled for the first time using geological logging, structural interpretation and drilling completed during the 2023 and 2024 drill campaigns.

The geological models developed for both pegmatites at Lei form the basis for the Exploration Target ranges presented:

- **Lei Primary Pegmatite:** 0.8–3.2 Mt at 1.20–1.60% Li_2O
- **Lei Secondary Pegmatite:** 3.2–6.5 Mt at 1.20–1.60% Li_2O

Preliminary mine planning indicates that the proposed underground decline may be positioned between the Primary and Secondary Pegmatites, enabling access to both bodies from shared infrastructure. This informs the Company's assessment of Reasonable Prospects for Eventual Economic Extraction (RPEEE), although no Mineral Resource has yet been estimated for the Secondary Pegmatite.

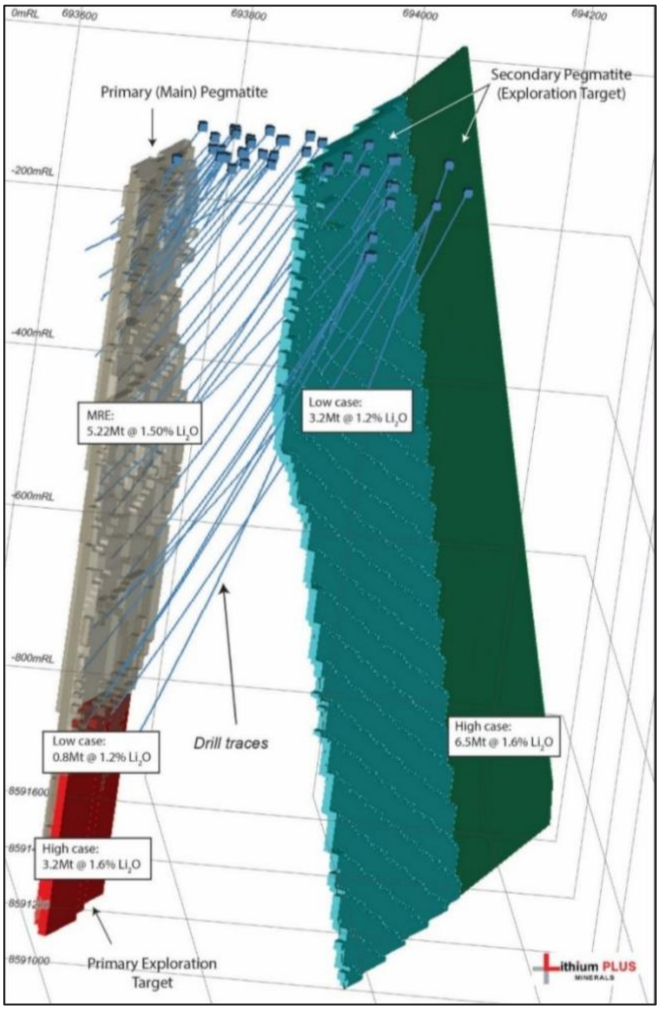

***Figure 2:** Exploration Targets for both Lei Primary and Lei Secondary Pegmatites*

Note: Values are limited to one decimal place to emphasise the conceptual nature of exploration targets and to avoid implying unwarranted precision

An Exploration Target has also been developed for the Perseverance Pegmatite, located 12km north of Lei. The Exploration Target for Perseverance is based on 34 drill holes with a total length of 3,729.8m.

The geological model developed for Perseverance forms the basis for the Exploration Target ranges presented:

- **Perseverance Pegmatite:** 3.6-9.7Mt at 1.20–1.60% Li_2O

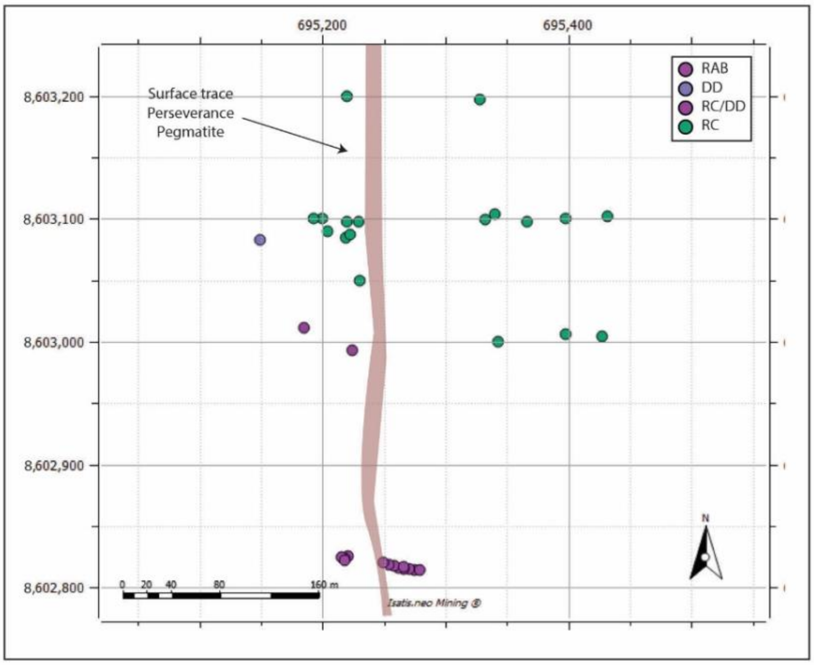

***Figure 3:** Perseverance Pegmatite collar location plan map by drill type.*

***Cautionary Statement:** While the available drilling supports geological interpretation of the Perseverance pegmatite geometry and lithium mineralisation, the current drill density and geological confidence are insufficient to support classification of the pegmatite as a Mineral Resource under the JORC Code (2012).*

Field Work to Commence at Bynoe

During the quarter, the Company confirmed that a field program is to commence across the Bynoe Lithium Project, targeting resource growth, discovery and development opportunities. Drilling is planned to advance the high-priority regional exploration targets, including at Perseverance. High-priority drilling is planned at Perseverance, where previous drilling returned exceptional wide, high-grade intercepts (~4km from Core Lithium's (ASX: CXO) Grants Mine), including:

- **19m at 1.58% Li_2O** from 148m, including **4m at 2.62% Li_2O** (BYPRC012)
- **7m at 1.22% Li_2O** from 110m (BYPRC031)

Perseverance remains open along strike and at depth, with geological interpretations indicating potential for increasing width and grade down plunge.

Additionally, further resource growth is planned at the Lei primary (main) pegmatite and the Lei secondary pegmatite. The upcoming field program will also evaluate a number of additional exploration targets across the broader Bynoe Project area, as the Company continues to build a pipeline of priority targets to pursue both resource expansion and new lithium discoveries within its 100%-owned tenure.

Key upcoming activities include

+ Field work planned at Bynoe.
+ Finalise the remaining components of the SER.
+ Update the mine design and detailed mining schedule.
+ Complete the capital and operating cost estimates.
+ Complete Lei DSO scoping study.
+ Advance the offtake, project finance and downstream processing arrangements.

Corporate

Lithium Plus had a cash balance of A$2.409 million at 30 June 2026 and no debt (excluding typical trade creditors). Exploration and evaluation expenditure incurred during the Quarter was A$558,000.

In April 2026, Lithium Plus raised A$2.15 million through the issue of 21,500,000 shares at A$0.10 per share to professional and sophisticated investors (refer ASX Announcement dated 17 April 2026 – *A$2.15M Placement to Fund Development of Bynoe Lithium Project*). The Placement was strongly supported, with applications exceeding the shares available.

Long-term shareholder Suzhou CATH Energy Technologies (CATH) sought to participate in the Placement. However, due to the timing of the required Chinese regulatory approvals for outbound investment, CATH was unable to complete its subscription before the Placement closed. Accordingly, its allocation was reallocated to other investors on the same terms. CATH subsequently obtained the required Chinese regulatory approval following completion of the Placement.

Related party transactions

Payments to related parties of the entity and their associates (refer section 6 of Appendix 5B):

- Included at section 6.1 - Comprises: Remuneration of directors (A$70,000)
- Included at section 6.2 - Nil

Listing Rule 5.3.1 and 5.2.3

In accordance with ASX Listing Rule 5.3.1, the Company confirms that there have been no material developments or changes to its exploration activities, and provides the following information:

- Approximately A$558,000 was incurred by the Company in respect of exploration activity for the quarter ended 30 June 2026, primarily on:
  - Environmental Impact Assessment study on the Lei lithium deposit
  - Lei lithium deposit scoping study
  - 2026 field season evaluation and preparation at Bynoe and Arunta
- A summary of the specific exploration activities undertaken is included this activity report.

In accordance with ASX Listing Rule 5.3.2, the Company advises that no Mining Development or Production activities were conducted during the Quarter.

Prior disclosure statement

The information in this report relating to Mineral Resources, Exploration Targets and Exploration Results was previously reported in the ASX announcements referenced in this report. The Company confirms that it is not aware of any new information or data that materially affects the information included in those announcements and that all material assumptions and technical parameters continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified.

This announcement has been authorised for release by the Board of Lithium Plus.

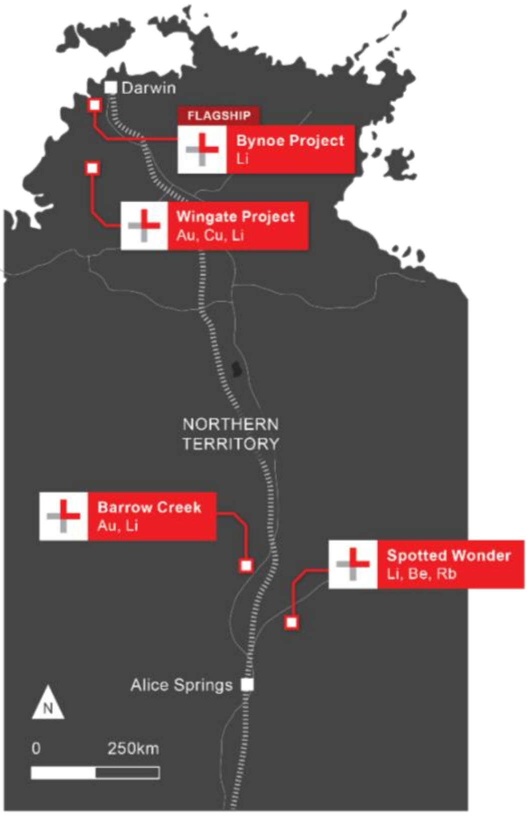
About Lithium Plus Minerals

Lithium Plus Minerals Limited (ASX: LPM) is an Australian exploration and development company focused on lithium, gold and critical minerals projects located in the Northern Territory.



Bynoe Lithium Project (100% LPM)

Situated on the Cox Peninsula, 45km south of Darwin, on the northern end of the Litchfield Pegmatite Belt, with 11 granted tenements covering 297km^2. Geologically centred around the Bynoe Pegmatite Field, the tenements share a border with Core Lithium's Finniss mine development. Significant lithium mineralisation was discovered at Lei in 2017 within the north-northeast trending spodumene bearing pegmatites. Current drill ready targets are Lei, SW Cai, Cai and Perseverance.

Wingate Project (100% LPM)

Located 150km south of Darwin. LPM holds three granted tenements EL31132, EL34006 and EL34007 covering 485km^2. The tenements cover the Wingate Mountains Pegmatite District, the southern part of the Litchfield Pegmatite Belt. It contains the known presence of pegmatites with little exploration and minor historical production of tin and the historical gold workings at the Fletcher's Gully goldfield.

Arunta Projects (100% LPM)

Barrow Creek

Located in the Northern Arunta pegmatite province, 300km north of Alice Springs. Historic tin and tantalum production and the presence of spodumene in nearby Anningie Pegmatite field suggest lithium potential.

Spotted Wonder

Located approximately 200km north-north-east of Alice Springs with identified lithium, rubidium and beryllium mineralisation, with amblygonite present in the Delmore Pegmatite.

7.5	**Unused financing facilities available at quarter end**	-
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.	

8.	**Estimated cash available for future operating activities**	**$A'000**
8.1	Net cash from / (used in) operating activities (item 1.9)	(394)
8.2	(Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(558)
8.3	Total relevant outgoings (item 8.1 + item 8.2)	(952)
8.4	Cash and cash equivalents at quarter end (item 4.6)	2,409
8.5	Unused finance facilities available at quarter end (item 7.5)	-
8.6	Total available funding (item 8.4 + item 8.5)	2,409
8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	2.53

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer: N/A

8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

Answer: N/A

8.8.3	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?
	Answer: N/A
	Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 28 July 2026...

Authorised by: .By the Board..
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
