Follow-up Drill Program Underway
BARLEE GOLD PROJECT

HIGHLIGHTS

- A **2,500m RC drill program** at the Barlee Gold Project has commenced.
- This represents only the **second drilling program undertaken at the project to date**.
- Designed to follow up **strong maiden drill results** previously reported, including:
    - **Gromit: 30m @ 1.1g/t Au from 12m, incl. 9m @ 2.4g/t Au from 24m.**
    - **Odie: 6m @ 1.1g/t Au from 33m.**
    - **Astro: 12m @ 1.3g/t Au from 28m and 1m @ 4.7g/t Au (end of hole).**
- Drilling will test the continuity and extensions of gold mineralisation within broader, high amplitude gold-in-soil anomalies identified through previous geochemical programs.
- Geochemical sampling to complete coverage of prospective areas within E77/3160 is progressing, with results expected to support ongoing target generation across the broader Barlee Gold Project.

Duketon Mining Limited (**Company** or **DKM**) is pleased to announce that drilling has commenced at the Company's 100% owned Barlee Gold Project (**Project**), with approximately 2,500m of RC drilling planned.

This program represents only the second drilling campaign undertaken at the Project and is designed to test extensions to the mineralised intercepts identified during the maiden drill program (see ASX announcements 23/06/2026 and 01/07/2026). All planned drill holes are located within the envelope of the previously reported high amplitude “gold in soil” anomalies (see ASX announcement 10/08/2026), providing an opportunity to test extensions and continuity of gold mineralisation beneath and along these geochemical anomalies.

This drill program has been bought forward following the early availability of a suitable drill rig, allowing DKM to accelerate its planned follow-up exploration at the Project.

Managing Director Stuart Fogarty said *"The maiden drilling program at Barlee in July was a great success and we have been very keen to get back on the ground as soon as possible. The initial discoveries have made us very excited about the upside at Barlee. This is a project of significant scale with multiple gold targets that remain untested. This second phase program will provide invaluable targeting information that will inform future programs as we continue to grow our understanding. We believe there is an excellent opportunity for a new gold camp to emerge at Barlee."*

Competent Person Statement:

The information in this release that relates to exploration results is based on historical and current information compiled by Ms Kirsty Culver, Member of the Australian Institute of Geoscientists (AIG) and an employee of Duketon Mining Limited. Ms Culver has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity that is being undertaken to qualify as a competent person as defined in the JORC Code 2012. Ms Culver consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

Validity of Referenced Results

The information in this report that references previously reported exploration results have been extracted from the Company's ASX market announcements released on the date noted in the body of the text where that reference appears. The previous market announcements are available to view on the Company's website or on the ASX website (www.asx.com.au). The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.
