This announcement has been authorised for release by the CEO of Directors of Control Bionics Limited.

About Control Bionics

Control Bionics Limited is a neurotechnology company commercialising objective, non-invasive neural-signal technology proven in clinical environments and built to scale across multiple markets. Its neural-signal platform captures the body's physiological signals, including the electrical activity generated by muscles, with medical-grade precision and converts them into measurable, decision-ready outcomes. A single underlying technology platform serves four applications: Performance, Rehabilitation, Research & Data, and Assistive Communication. The technology has historically been deployed in assistive communication and is now being extended into sports performance, rehabilitation, medical research, platform partnerships and broader human-computer interface applications. Control Bionics' technology does not require surgery or implantation, and holds regulatory clearances in the US, Australia and Europe. The Company is also a registered NDIS provider in Australia.
