Tundulu Assay Pipeline Continues to Build

AuKing Mining Limited (ASX: AKN) ("AuKing" or "the Company") is pleased to provide an operational update on the processing and assay status of drill samples from the Tundulu Rare Earths Project in southern Malawi.

AuKing's exploration team has now secured eight Malawi export approvals covering a total of 4,133 samples generated from the reverse circulation (RC) phase of the drilling program. The eighth approval covers the final three RC drill holes and comprises 357 samples. Further export approvals will be sought over the next two weeks for the samples generated from the ongoing diamond drilling program.

Assay results for the first two batches, comprising a total of 1,270 samples from the initial drilling at Tundulu, are yet to be received by the Company. Every effort is being made to expedite the completion of the assays, with results expected imminently.

The third batch, comprising a further 577 samples, has now been received at Intertek's Perth laboratory for processing.

Given the significant number of samples generated from the drilling program, AuKing expects a substantial flow of assay results and associated geological information over the coming weeks and months. This information will support the Company's objective of preparing a maiden Mineral Resource Estimate for Tundulu before the end of the year.
