Bryah Gold Drilling Completed

Tambourah Metals Ltd (ASX:TMB) is pleased to announce that ~4,000m of aircore drilling has been completed at the T2 gold-in-soil anomaly and the west Harmony gold targets within Tambourah's Bryah Gold Project, located 160km north of Meekatharra, Western Australia (see Figure 4). Drill samples have been transported to Perth for assay, with results expected within four to five weeks.

DRILLING PROGRESS

- A contract has been signed for diamond drilling at the Beatty Park Sth gold discovery. Crews are mobilising to site this week and drilling is expected to commence in the week beginning 6 September. The program has planned hole depths of 300m and is targeting the zone below the high-grade gold intersections reported in aircore drilling[1] where the SAM geophysical survey mapped significant variations in conductivity (see Figure 1). Five RC precollars were completed in August in preparation for the diamond drilling.
- The T2 gold-in-soil anomaly is located 1100m south of the Beatty Park gold discovery (see Figure 2). T2 is an untested gold anomaly within the structurally modified and altered Narracoota Formation ultramafic–mafic sequence. Aircore drilling intersected a sequence of variably chlorite, silica, ankerite and sericite altered ultramafics of the Narracoota Formation hosting numerous quartz veins. The alteration observed in drill chips is consistent with the alteration mineralogy associated with orogenic gold systems.
- At the West Harmony area located 4km west of the Harmony gold mine (see Figure 3), wide-spaced reconnaissance aircore drilling was completed over an area of 2,000m by 1,200m in an area of mapped transported cover. The drilling targeted a historic gold anomaly within the Ravelstone Formation coincident with through-going northwest-trending lineaments, interpreted from aeromagnetic data, that represent potential fluid pathways. The results of the drilling are being assessed. 392m of RC drilling were completed at the Baxters Sth gold target and samples have been submitted for assay.

Rita Brooks, Executive Chair commented "*the team have been busy drilling RC and aircore programs at Beatty Park, Baxter Sth and West Harmony in the past month. The diamond drilling will be commencing shortly at Beatty Park and we are looking forward to discussing our exploration progress in a webinar to be held at 10am (WST) on September 14th 2026.*"

This announcement has been authorised for release by the Board of Directors of the Company.

About Tambourah Metals

Tambourah Metals is a Western Australian exploration company established in 2020 to advance gold and critical minerals projects. The Company is planning a maiden resource estimate for the Tambourah Gold Project, beginning at Tambourah King, and is also actively testing multiple gold targets within the Bryah Gold Project. Tambourah is exploring for a range of critical minerals, including lithium, antimony, silver, tin and tantalum across the Tambourah, Eleys, Coondina, Kurrana (Pilbara) and Speewah North (Kimberley) projects.

Since listing, the Company has extended the tenement portfolio to include additional critical mineral projects in the Pilbara and gold projects in the Bryah, acquiring strategic positions in districts with known endowment and production.

Forward Looking Statements

Certain statements in this document are or may be "forward-looking statements" and represent Tambourah's intentions, projections, expectations or beliefs concerning, among other things, future exploration activities. The projections, estimates and beliefs contained in such forward-looking statements necessarily involve known and unknown risks, uncertainties and other factors, many of which are beyond the control of Tambourah Metals, and which may cause Tambourah Metals' actual performance in future periods to differ materially from any express or implied estimates or projections. Nothing in this document is a promise or representation as to the future. Statements or assumptions in this document as to future matters may prove to be incorrect and differences may be material. Tambourah Metals does not make any representation or warranty as to the accuracy of such statements or assumptions.

The references in this announcement to Exploration Results were reported in accordance with Listing Rule 5.7 in the following announcements:

- *"High grade gold targets identified at Bryah Project" 20th June 2024.*
- *"High-Grade Gold up to 126g/t at Beatty Park Sth" 4th August 2025.*
- *"High-Grade Gold in Follow-Up Drilling at Beatty Park Sth" 1st October 2025.*
- *"Expanded Gold Targets at Beatty Park Sth" 22nd January 2026.*

The Company confirms it is not aware of any new information or data that materially affects the information in the original reports and that the form and context in which the Competent Person's findings are presented have not been materially modified from the original reports.

Competent Person's Statement

The information in this report that relates to Exploration Results is based on information compiled by Mr Bill Clayton, Geology Manager, shareholder and Director of the Company, who is a Member of the Australian Institute of Geoscientists. Mr Clayton has sufficient experience relevant to the style of mineralisation and type of deposits under consideration, and to the activity he is undertaking, to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Clayton consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
